

## Supplementary Figure 2

Bubble plot of year-specific percent difference in (A) number at age and (B) instantaneous annual fishing mortality $(F)$ at age between the base model used in the 2012 stock assessment and the base model used in the 2012 stock assessment with the logistic maturity relationship described in this work (proportion of age- 1 spawners is 0.68 ). Open circles indicate an increase in the predicted value and shaded circles indicate that the estimates are less than those predicted in the 2012 stock assessment. The magnitude of percent difference is displayed as the relative size of the circle (note: each panel has a different scale for the circles).

## Supplementary Table

Samples sizes of Gulf menhaden (Brevoortia patronus) by year for the length-weight relationships estimated from fisherydependent data for 1964-2014. Samples were reduced in 2010 due to closure of the fishery following the Deepwater Horizon oil spill.

| Year | Sample size ( $n$ ) |
| :---: | :---: |
| 1964 | 12,457 |
| 1965 | 15,819 |
| 1966 | 13,016 |
| 1967 | 14,519 |
| 1968 | 16,499 |
| 1969 | 15,281 |
| 1970 | 10,560 |
| 1971 | 7859 |
| 1972 | 10,030 |
| 1973 | 8958 |
| 1974 | 10,120 |
| 1975 | 9529 |
| 1976 | 13,586 |
| 1977 | 14,918 |
| 1978 | 12,985 |
| 1979 | 11,620 |
| 1980 | 9961 |
| 1981 | 10,408 |
| 1982 | 10,709 |
| 1983 | 14,840 |
| 1984 | 16,000 |
| 1985 | 13,240 |
| 1986 | 16,530 |
| 1987 | 16,529 |
| 1988 | 12,410 |
| 1989 | 13,971 |
| 1990 | 11,686 |
| 1991 | 11,691 |
| 1992 | 15,658 |
| 1993 | 15,735 |
| 1994 | 16,823 |
| 1995 | 14,525 |
| 1996 | 13,558 |
| 1997 | 10,956 |
| 1998 | 10,203 |
| 1999 | 11,933 |
| 2000 | 9794 |
| 2001 | 7462 |
| 2002 | 6720 |
| 2003 | 9364 |
| 2004 | 7672 |
| 2005 | 7292 |
