Fishery Statistics of the United States and Alaska are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of manufactured products and byproducts, the employment of men, craft, and gear in the capture of fishery products, employment in shore establishments, and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality, and year, and on the types of gear and boats operated. They assist conservation agencies so to regulate the commercial fisheries as to produce maximum yields without depletion.

Previous statistical reports on the fishery industries issued under the Department of the Interior were as follows: Administrative Report No. 41, for 1938 (Appendix III to Report of Commissioner of Fisheries, 1940); Statistical Digest No. 4, for 1940; Statistical Digest No. 7, for 1941; and Statistical Digest No. 11, 1942. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

INTRODUCTION

This report contains a review of the fishery statistics for the year 1943, collected by the Division of Commercial Fisheries during 1944. These include data on the volume of the catch of fishery products and their value, employment in the fisheries, quantity of gear operated, the number of fishing and transporting craft employed in the capture and transporting of fishery products, employment in the wholesale and manufacturing establishments, and the volume and value of the production of manufactured fishery products and byproducts.

Statistical surveys for 1943 data were conducted in all sections except the Chesapeake, South Atlantic, Gulf, and Mississippi River States. Statistics on the various fisheries were collected by the following field agents: R. L. Greer, V. E. Heffelfinger, D. A. McKown, C. M. Reardon, C. D. Stewart, C. B. Tendick, and R. H. Wilson. The surveys in the New England States were supervised by B. E. Lindgren and those in the Middle Atlantic States by F. J. Anderson. Data for the Great Lakes were assembled by the staff of Dr. John Van Oosten of the Division of Fishery Biology. Those on the fisheries of Alaska were collected by the Alaska Division of the Service.

The statistical surveys conducted during 1944, for 1943 data, were under the general direction of E. A. Power, Chief, Fishery Statistical Section, assisted by A. M. Sandberg, Fishery Marketing Specialist. The survey material was assembled, tabulated, and prepared for publication by the staff of the Fishery Statistical Section under the direction of D. Y. Aska, Statistician, assisted by R. L. Busby, Melissa Tinkey, and Virginia Coyne. Katherine L. Howe, artist of the Service, prepared many of the illustrations contained in this report.

In assembling the data on the fisheries, use was made of all records collected by the various State fishery agencies. In the Great Lakes and Pacific Coast States, these records were such that it was only necessary for the Service personnel to conduct partial surveys. Statistics on the freezings and cold-storage holdings of fishery products were furnished by the War Foods Administration, and those on the imports and exports of fishery products by the Bureau of the Census.

Grateful acknowledgement is extended to the State and Federal agencies and to the various individuals who cooperated in furnishing portions of the data contained in this volume.

SECTION 1.- GENERAL REVIEW

Based upon available statistics for 1943, there was a small increase in the catch of fishery products in the United States and Alaska as compared with that of the preceding year, but a large increase in the value of this catch to the fishermen. Comparisons of sections surveyed in 1943 with these same sections for 1942 indicate an increase of 3 percent in volume, and an increase of 21 percent in value received by the fishermen. The catch increased in all sections as compared with the 1942 catch, except in the New England States. The yield in the Pacific Coast States increased 6 percent, Alaska 14 percent, Lakes States 4 percent, and Middle Atlantic States 1 percent, while the New England catch decreased 8 percent. As a result of a general increase in the price paid for fishery products in 1943, fishermen received more for their catch than in any previous year. Available data indicate that fishermen received an average of 4.86 cents per pound for their catch in 1943, as compared with 4.39 cents per pound in 1942 and 2.64 cents per pound in 1941. The total volume of the production of canned fishery products decreased 6 percent and the value decreased 3 percent. The value of packaged fish increased 9 percent and that of fishery byproducts increased 16 percent, due largely to large increases in the volume and value of the production of fish meal and oil.

The total catch of fishery products in the United States and Alaska as based upon surveys for 1943 in all areas except the Chesapeake, South Atlantic and Gulf, and Mississippi River and tributaries which are for 1942, 1940, and 1931, respectively, amounted to 3,952,901,000 pounds, valued to the fishermen at \$178,749,000. However, it is estimated that if complete data on the 1943 catch had been available for all sections, the total production would have amounted to about 4,202,000,000 pounds, valued at about \$204,000,000. The following table, which contains recorded production for the areas in which surveys were conducted and estimates for other areas, indicates the trend of the yield and value of the domestic catch during recent years:

Year	Pounds	Value to fishermen
1939	4,443,328,000	\$96,532,000
1940	4,059,524,000	98,957,000
1941	5,080,341,000	134,172,000
1942	3,876,524,000	170,338,000
1943	4,202,000,000	204,000,000

The production of canned fishery products in the United States and Alaska during 1943 amounted to 620,880,523 pounds, valued at \$141,188,792, the output of byproducts was valued at \$59,136,266, and the production of frozen fishery products, excluding packaged products, amounted to 138,031,023 pounds, estimated to be valued at \$24,500,000. Based on the most recent surveys, the production of cured fishery products amounted to 91,754,549 pounds, valued at \$14,109,864, and fresh and frozen packaged fish and shellfish, 267,922,998 pounds, valued at \$56,477,111. It is estimated that about 693,000,000 pounds of fresh fishery products (excluding fresh packaged fish and shellfish), valued at \$118,000,000, were marketed during 1943. The total market value to domestic primary handlers of all fishery products in 1943 is estimated at \$413,412,033.

New England States. —The commercial catch of fishery products in these States for 1943 showed a decrease of 8 percent in volume, but an increase of 18 percent in value compared with 1942. The value of the 1943 catch was the largest on record. Of the major species, mackerel was the only item to show any appreciable increase over 1942. Receipts of rosefish, haddock, cod, pollock, whiting, and flounders, were all landed in smaller amounts than the previous year. The catch of shellfish, however, did show a slight increase in 1943, due largely to a substantial gain in lobster landings.

Middle Atlantic States.—The 1943 catch of fishery products in the Middle Atlantic States showed an increase of less than one percent in volume, but a gain of 45 percent in value as compared with 1942. Menhaden, 196,258,600 pounds, which accounted for 61 percent of the total catch, was 8 million pounds less than the previous year. Whiting, 13,504,900 pounds, was reported at 4 million pounds above 1942. The value of the production of canned fishery products and fish meals decreased, while that of fish oils was greater than 1942. Although many fishermen entered the armed services during the year, the high prices for fishery products attracted replacements and 7,458 fishermen engaged in the taking of fishery products during 1943—an increase of 911 compared with the previous year.

Chesapeake Bay States.—No survey was made of the employment of fishermen, fishing craft and gear, or the catch of fishery products in the Chesapeake Bay States for 1943. Data obtained in connection with the annual canned fishery products and byproducts surveys indicate the value of the pack of canned products in 1943 was 46 percent above the previous year. A large gain in the pack of alewives and alewife roe accounted for the increase. The catch of menhaden and the production of menhaden scrap and meal increased about 40 percent over the previous year, however, the yield of menhaden oil showed a slight decline because of the low oil content of the fish.

South Atlantic and Gulf States.—No survey was made of the employment of fishermen, fishing craft and gear, or the catch of fishery products in the South Atlantic and Gulf States for 1943. Data obtained in the canned fishery products and byproducts survey of these States showed a small decline in the production of canned oysters and a large decline in the pack of canned shrimp. The pack of shrimp, 471,520 standard cases, was 30 percent below the 1942 pack and 41 percent below the 1940 production.

The catch of menhaden, in the South Atlantic and Gulf States, during 1943 amounted to 331,600,000 pounds, an increase of 54 percent compared with the 1942 catch.

Pacific Coast States.—The commercial catch of fishery products in the Pacific Coast States was 6 percent greater in volume and 16 percent more in value than in 1942. The total catch was almost exactly equivalent to that of 1940, but the value was nearly double. Catches of mackerel, pilchard, tuna, rockfish, and sharks were all above 1942, while salmon, sole, and Pacific oysters were less. More than 9 million pounds of squid were landed as compared with 960,400 pounds in 1942. The pack of salmon declined 64 percent, and canned sardines, 10 percent, however, the production of canned tuna showed an 8.5 percent increase and that of mackerel was 35 percent above the previous year. There were also increases in the production of pilchard, tuna and mackerel meals and oils and of liver oils as compared with 1942. The number of fishermen employed in the three Pacific Coast States in 1943 totaled 23,108—an increase of 2,061 over the previous year.

Great Lakes States.—In 1943, the commercial catch of fish by United States fishermen in the Great Lakes and the International lakes of Northern Minnesota increased 4 percent above the preceding year, while the value increased 42 percent. Among the major species, the catch of blue pike, 11,272,700 pounds, showed the largest variation compared with the previous year. Fishermen took over 5 million more pounds of these fish than in 1942. The catch of blue pike was the largest since 1936, however, the catch of lake herring 17,894,000 pounds, was the smallest since 1933.

Mississippi River and tributaries.—The most recent complete statistics of the catch in the Mississippi River and its tributaries are those for 1931. Data obtained in the 1943 survey of the production of fishery byproducts showed that there was a decline in the production of fresh-water mussel-shell buttons compared with the previous year.

Alaska.—The catch of fishery products in Alaska in 1943 increased 14 percent in both volume and value as compared with 1942. A total of 23,711 persons were employed in catching, transporting, and the wholesaling and manufacturing of fishery products in Alaska during 1943—an increase of 495 compared with the previous year. The production of fresh, frozen, and canned fishery products and byproducts showed increases in volume and value compared with 1942, however, the production of cured fish declined due to a large decrease in the pack of mild-cured salmon. The herring catch, although not equal to that of 1941, was 107 percent above 1942.

MANUFACTURED FISHERY PRODUCTS

The output of manufactured products (canned, cured, packaged, and byproducts) in the United States and Alaska during the most recent years for which these data are available was valued at \$270,917,147. Of this amount, canned products accounted for 52 percent; byproducts, 22 percent; packaged fish, 14 percent; packaged shellfish, 7 percent; smoked fish, 3 percent; and salted, pickled, and dried fish, 2 percent.

Since general statistical surveys were not conducted in all areas of the United States for 1943 data, the following compilation of manufactured fishery products consists of composite data, based on the most recent statistics available. Data on the production of canned products and byproducts are for 1943 and cover all sections of the United States and Alaska. Data on packaged fish also are for 1943 and are complete, except for California, for all sections of the United States and Alaska. Information on the production of cured products and packaged shellfish are for 1943 in Alaska, and for 1940 in all other sections except the Mississippi River which are for 1931.

CANNED FISHERY PRODUCTS AND BYPRODUCTS

The output of canned fishery products and byproducts in the United States and Alaska in 1943 was valued at \$200,325,058. Of this total value, canned products accounted for \$141,188,792, and byproducts, \$59,136,266, a decrease of 3 percent in the value of canned products, but an increase of 16 percent in the value of byproducts, as compared with the previous year.

Fishery products were canned at 320 establishments in the United States and Alaska during 1943, as compared with 371 in 1942. The combined output of these canneries amounted to 16,716,182 standard cases, constituting a total net weight of 620,880,523 pounds, a decrease of 6 percent as compared with the net weight of the 1942 pack.

Canned fishery products and byproducts were prepared in 26 States and Alaska during 1943. California ranked first in the value of products, accounting for 37 percent of the total, and Alaska was second, with 30 percent.

FROZEN FISH TRADE

FISH FROZEN

A total of 246,053,445 pounds of fishery products were frozen during 1943 by domestic freezing plants that reported their activities to the government. At the time these products were held in cold-storage, they were estimated to be valued at \$55,000,000. Compared with the production in 1942, this is decrease of less than 1 percent in volume but an increase of 45 percent in the estimated value of the products.

Eight items accounted for 52 percent of the poundage frozen. These were whiting, which accounted for 13 percent of the total; rosefish fillets, 11 percent; mackerel, 7 percent; halibut, 6 percent, shrimp, 6 percent; and cod fillets, haddock fillets, and sea herring, each 3 percent.

According to geographical sections, the New England States led all other sections in the freezings of fishery products, accounting for 41 percent of the total. The Pacific Coast States ranked second in the total freezings, with 26 percent of the total.

The bulk of the production occurred between May and November with the largest monthly freezings being made in July and August.

¹ These statistics in this section were furnished by the War Foods Administration.

HOLDINGS

Monthly holdings of frozen fish and shellfish in 1943 averaged 70,192,000 pounds, a decrease of 19 percent as compared with the previous year. The holdings on the first of December amounted to 104,850,000 pounds and were the largest for any month during the year; while those on the first of May were the smallest. According to the geographical distribution of average monthly holdings, the Pacific Coast States ranked first, followed closely by the New England and Middle Atlantic States sections.

COLD-STORAGE HOLDINGS OF CURED FISH

During 1943, monthly cold-storage holdings of cured herring averaged 12,052,000 pounds, while those of mild-cured salmon averaged 2,463,000 pounds. This was a decrease of 8 percent in the average holdings of cured herring and 53 percent in average mild-cured salmon stocks compared with those of 1942. Stocks of cured herring were largest between July and September, when holdings averaged 19,760,000 pounds, while the largest holdings of mild-cured salmon were reported during January when 5,465,814 pounds were in storage.

FOREIGN FISHERY TRADE ²

The foreign trade in fishery products of the United States in 1943 amounted to \$113,060,518, of which \$67,230,966 represents the value of these products imported for consumption and \$45,829,552, the value of exports of domestic fishery products. Compared with the previous year this was an increase of 61 percent in the total trade, 75 percent in imports, and 43 percent in exports.

Imports consisted of 324,388,591 pounds of edible fishery products, valued at \$43,669,354, and non-edible fishery products valued at \$23,561,612. Fishery exports consisted of 239,260,046 pounds of edible products, valued at \$43,244,479, and non-edible products, valued at \$2,585,073.

Import duties levied on fishery products imported during 1943 totaled \$3,522,862, an increase of 30 percent as compared with the previous year.

² These statistics have been furnished by the Bureau of Census, Department of Commerce.

SECTION 2.- NEW ENGLAND FISHERIES

(Area XXII)³

The yield of the commercial fisheries of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) during 1943 amounted to 645,590,500 pounds, valued at \$43,003,165 to the fishermen, representing a decrease of 8 percent in volume but an increase of 18 percent in value as compared with the catch in 1942. These fisheries gave employment to 16,755 fishermen as compared with 15,044 fishermen in 1942. Of this number 4,431 were employed on vessels and 12,324 were engaged in the boat and shore fishery.

Canned fishery products, valued at \$14,185,167, were packed in 48 plants in the New England States, while 35 plants produced byproducts, valued at \$3,604,834. The production of packaged fish (fresh and frozen fillets and steaks) was valued at \$26,345,939.

³ This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV. It should be observed that data on the seed-oyster fishery, such as number of persons engaged, craft and gear employed, and catch, are not included in the statistics of the fishery for market oysters and other species but are included in a foot note to the table showing the catch of the New England States which appears on page 53. For a description of the methods used in collecting and compiling these statistics, and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled, "Statistical Survey Procedure".

LANDINGS AT CERTAIN NEW ENGLAND PORTS

Because of the importance of the ports of Boston, Gloucester, and New Bedford, Mass., and Portland, Maine, as landing points for fishery products, detailed monthly statistics have been collected on these landings and are presented in the following pages.

⁴ The reader is referred to Section 11 of this document for an account of the years for which surveys of these fisheries have been made.

VESSEL LANDINGS AT BOSTON, GLOUCESTER, AND PORTLAND

Economic aspect

During 1943 landings of fishery products at Boston, Gloucester, and Portland, (see Page 95 for data on New Bedford landings) by vessels of 5 net tons capacity or more, amounted to 331,363,060 pounds as landed, valued at \$22,520,198 to the fishermen. This was a decrease of 11 percent in volume but an increase of 17 percent in value as compared with 1942. For the first time since 1907, the landings at Gloucester exceeded those at Boston due largely to the heavy landings of rosefish. Landings at Gloucester amounted to 170,098,754 pounds, valued at \$9,046,538, or 51 percent of the total receipts; those at Boston amounted to 142,975,235 pounds, valued at \$12,603,640 or 43 percent of the total; while those at Portland amounted to 18,289,071 pounds, valued at \$870,020, or 6 percent of the total.

Biological aspect

During 1943, the fishing fleet operating on the fishing banks of the North Atlantic and landing fares at Boston, Gloucester, and Portland, numbered 294 vessels of 5 net tons capacity or greater, as measured by the United States Customs Service. The catch of edible fish landed at the three ports, with the salted fish converted to the basis of fresh, gutted, or round weight, as usually landed, amounted to 531,369,270 pounds. This however, does not represent the entire catch of these vessels, since they also landed fares at other New England ports, at New York City, and at more southern ports in connection with the southern winter trawl and mackerel fisheries.

Other trawls of all sizes accounted for 270,768,432 pounds, or 82 percent of the total landings. Purse seines were next in importance, accounting for 36,425,846 097 pounds, or 11 percent of the total.

1/ EXCLUSIVE OF DUPLICATION. 2/ INCIDENTAL CATCH.

NOTE:--THE "CERTAIN NEW ENGLAND PORTS" ARE BOSTON AND GLOUCESTER, MASSACHUSETTS, AND PORTLAND, MAINE. OTTER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE VESSEL. "SMALL" OTTER TRAWL VESSELS ARE THOSE OF 5 NET TONS TO 50 GROSS TONS CAPACITY; "MEDIUM" 51 GROSS TONS TO 150 GROSS TONS; "LARGE" 151 GROSS TONS OR GREATER. THE WEIGHT OF SALTED FISH LANDED HAS BEEN CONVERTED TO THE EQUIVALENT OF FRESH FISH AS LANDED. ONLY LANDINGS BY VESSELS CONTROLLED BY THE FISHERY CONTROL BOARD ARE SHOWN IN THIS TABULATION. "OCCASIONAL" AFTER THE NAME OF A BANK OR AREA INDICATES THAT THE VESSEL'S CATCH AT THAT PLACE WAS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR. IN SUCH CASES, THE NUMBER OF VESSELS FISHING, THE NUMBER OF TRIPS, AND THE NUMBER OF TRIP DATES ARE SHOWN UNDER THE PRINCIPAL TYPE OF GEAR USED. A SINGLE TRIP IS REPORTED FOR EACH VOYAGE. WHEN A VESSEL OPERATES IN TWO OR MORE AREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE AREAS ON THE BASIS OF THE CATCH REPORTED TAKEN IN EACH AREA.

2/ INCIDENTAL CATCH.

NOTE:--THE "CERTAIN NEW ENGLAND PORTS" ARE BOSTON AND GLOUCESTER, MASSACHUSETTS, AND PORTLAND, MAINE. OTHER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE VESSEL. SMALL OTHER TRAWL VESSELS ARE THOSE OF 5 NET TONS TO 50 GROSS TONS CAPACITY; "MEDIUM," 51 GROSS TONS TO 150 GROSS TONS; AND "LARGE," 151 GROSS TONS OR GREATER. THE WEIGHT OF SALTED FISH LANDED HAS BEEN CONVERTED TO THE EQUIVALENT OF FRESH FISH AS LANDED. ONLY LANDINGS BY VESSELS HAVING A CAPACITY OF 50 GROSS TONS OR GREATER ARE SHOWN. OTHER VESSELS WHICH WERE USED IN THIS TABULATION, IN OCCASIONAL AFTER THE NAME OF A BANK OR AREA INDICATES THAT THE VESSELS CONTRIBUTING TO THE CATCH AS SHOWN FISHED OFFSHORE. THE NUMBER OF VESSELS FISHING, THE NUMBER OF TRIPS, AND THE NUMBER OF DAYS ASSENT ARE SHOWN UNDER THE PRINCIPAL TYPE OF GEAR USED. A SINGLE TRIP IS TAKEN AS ONE VOYAGE. THE NUMBER OF VOYAGES WHICH A VESSEL OPERATES IN TWO OR MORE AREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE AREAS ON THE BASIS OF THE CATCH REPORTED TAKEN IN EACH AREA.

LANDINGS AT NEW BEDFORD, MASS.

Economic aspect

The landings of fishery products at New Bedford, Mass., by all sizes of fishing craft during 1943 amounted to 62,163,708 pounds, valued at \$5,979,888 to the fishermen. This represented increases of 7 percent in the volume of the landings and 31 percent in their value as compared to the landings during the previous year.

Landings of yellowtail flounders outranked all other species in volume and value, accounting for 41 percent of the total landings and 31 percent of the total value. Other items contributing to the major portion of the 1943 landings were haddock, other flounders, mackerel and cod. Landings of sea scallops ranked sixth in importance with respect to volume but second in value, totalling 3,831,596 pounds valued at \$1,624,503. Data on the landings of fishery products at New Bedford during 1943 are summarized on the following pages.

There is shown on the following chart the statistical areas and subareas used in reporting the catch landed at the ports of Boston, Gloucester, and New Bedford, Mass., and Portland, Maine.

NOTE: THE WEIGHTS OF FISH AND SHELLFISH REPRESENT THE POUNDAGE LANDED FROM THE VESSEL AND VALUES ARE THOSE RECEIVED BY THE FISHERMEN. THE GRADES, OR SIZES GIVEN FOR CERTAIN SPECIES ARE THOSE RECOGNIZED IN THE TRADE. THE LANDINGS INCLUDE RECEIPTS OF BOTH UNDERSTONE BOATS, AND VESSELS OF 5 NET TONS AND OVER. EXCEPTIONALLY HIGH PRICES WERE PAID, IN 1943, FOR CERTAIN ITEMS WHICH WERE NOT COVERED BY PRICE CELLINGS.

COMPILED FROM DATA COLLECTED JOINTLY BY THE MASSACHUSETTS DIVISION OF MARINE FISHERIES AND FISH AND WILDLIFE SERVICE.

Biological aspect

The fishing fleet operating on the banks of the North Atlantic and landing fares at New Bedford, Mass., during 1943 numbered 267 craft of all sizes. These craft made 5,729 trips during the year and were absent from port 17,698 days. Comparable data for 1942 are not available as detailed records on the number of trips, total days absent, and grounds fished, were not collected prior to 1943.

1/ EXCLUSIVE OF DUPLICATION.

2/ INCIDENTAL CATCH.

NOTE:

OTTER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" OTTER TRAWL CRAFT ARE THOSE UNDER 50 GROSS TONS CAPACITY; AND "MEDIUM", 51 GROSS TONS TO 150 GROSS TONS. A SINGLE TRIP IS SHOWN FOR EACH VOYAGE. WHEN A CRAFT OPERATES IN TWO OR MORE SUBAREAS DURING A VOYAGE, A FUNCTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE SUBAREAS ON THE BASIS OF THE TONNAGE REPORTED IN EACH SUBAREA. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR.

1/ EXCLUSIVE OF DUPLICATION.

NOTE.--THE ROMAN NUMERALS APPEARING IN THE STUB OF THE ABOVE TABLE REFER TO THE NUMBERS GIVEN THOSE REGIONS BY THE NORTH AMERICAN COUNCIL OF FISHERY INVESTIGATIONS.

SECTION 3.- MIDDLE ATLANTIC FISHERIES

(Area XXIII)⁵

The yield of the commercial fisheries of the Middle Atlantic States (New York, New Jersey, Pennsylvania, and Delaware) during 1943 amounted to 321,025,700 pounds, valued at \$18,045,820 to the fishermen. This represents an increase of less than one percent in volume but of 45 percent in value compared with the catch in 1942. These fisheries gave employment to 7,458 fishermen compared with 6,547 in 1942. There were no commercial fisheries prosecuted in the coastal waters of Pennsylvania during 1943.

Canned fishery products, valued at \$1,509,591 were packed in 10 plants in the Middle Atlantic States, while 46 plants produced byproducts, valued at \$8,588,976. The production of packaged fish (fresh and frozen fillets and steaks) was valued at \$4,687,122.

⁵ This number was assigned to this area by the North American Council on Fishery Investigations. It should be explained that there are included in this area craft whose principal fishing ports are in the area but at times fish elsewhere. A notable example is the southern trawl fishery which extends into Area XXIV. It should be observed that data on the seed-oyster fishery, such as number of persons engaged, craft and gear employed, and catch, are not included in the statistics of the fishery for market oysters and other species but are included in a footnote to the table showing the catch of the Middle Atlantic States which appears on Page 110. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled "Statistical Survey Procedure".

12/ INCLUDES MEDICINAL COD-LIVER OIL; MARINE-SHELL NOVELTIES; HORSESHOE CRAB DRY SCRAP; OYSTER-SHELL LIME DUST; AND MISCELLANEOUS DRY SCRAP.

13/ INCLUDES MENHADEN ACID AND DRY SCRAP, MEAL, AND OIL; HORSESHOE CRAB DRY SCRAP; AND OYSTER-SHELL POULTRY FEED AND LIME OR DUST.

NOTE---THE TOTAL VALUE OF THE MANUFACTURED PRODUCTS FOR THE MIDDLE ATLANTIC STATES WAS AS FOLLOWS: BY MANUFACTURING ESTABLISHMENTS, \$21,044,976, AND BY FISHERMEN, \$513,165. SOME OF THE ABOVE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM FISHERY PRODUCTS IMPORTED FROM ANOTHER STATE OR A FOREIGN COUNTRY, THEREFORE, THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH WITHIN THE STATE. OF THE TOTAL NUMBER OF PERSONS ENGAGED ON TRANSPORTING CRAFT, 100 MEN HAVE BEEN INCLUDED AS FISHERMEN; AND AMONG THE TOTAL NUMBER OF PERSONS ENGAGED IN THE PREPARATION OF FISHERMEN'S PREPARED PRODUCTS, 273 HAVE ALSO BEEN INCLUDED AS FISHERMEN. THIS SHOULD BE CONSIDERED WHEN COMPUTING THE TOTAL NUMBER OF PERSONS IN THE FISHERY INDUSTRIES EXCLUSIVE OF DUPLICATION.

HUDSON RIVER SHAD FISHERY ⁶

The shad fishery of the Hudson River in 1943 was prosecuted by 608 fishermen who made a commercial catch amounting to 1,121,437 shad, having a weight of 3,225,350 pounds with a value of \$357,356 to these fishermen. This was an increase of 9 percent in the number of shad, and 74 percent in their value, as compared with the catch during 1942. The average price per pound received by the fishermen was about 11 cents, almost double that of 1942.

Stake gill nets accounted for 67 percent of the weight of the shad taken; drift gill nets, 32 percent; and haul seines and stake stop nets comprised the remaining one percent.

Statistics of the catch of shad in the Hudson River also are included in the catch data for New York and New Jersey.

⁶ The reader is referred to Section 11 of this document for an account of the years for which surveys of this fishery have been made.

SECTION 4.- CHESAPEAKE FISHERIES

(AREA XXIII)⁷

The most recent statistics on the commercial fisheries of the Chesapeake States (Maryland and Virginia) are those for 1942. During that year the catch amounted to 202,240,100 pounds, valued at \$10,061,041 to the fishermen. These fisheries gave employment to 10,679 fishermen and 7,182 craft were employed.

Detailed statistics of these fisheries for 1942 appear in Statistical Digest No. 11, entitled "Fishery Statistics of the United States, 1942". A summary of these fisheries appears in the following tables.

⁷ This number has been assigned to this area by the North American Council on Fishery Investigations. It should be explained that there may be included under this area, craft whose principal fishing ports are in this area but at times fish elsewhere. Data on the operating units and catch of the fisheries of the Chesapeake States have been taken largely from statistics collected by the State fishery agencies of Maryland and Virginia. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections. It should be observed that data on the seed-oyster fishery, such as number of persons engaged, craft and gear employed, and catch, are not included in the statistics of the fishery for market oysters or other species but are included in a footnote to the table showing the catch of the Chesapeake States, which appears on Page 128. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled, "Statistical Survey Procedure".

1/ STATISTICS ON HARD CLAMS USED IN THIS TABLE ARE BASED ON YIELDS OF 6.14 POUNDS OF MEATS PER STANDARD BUSHEL IN MARYLAND AND 5.73 POUNDS OF MEATS IN VIRGINIA.

2/ STATISTICS ON MARKET OYSTERS IN THIS TABLE AVERAGE 4.63 POUNDS OF MEATS PER STANDARD BUSHEL IN MARYLAND, AND 4.19 POUNDS OF MEATS IN VIRGINIA.

NOTE:--DATA ON THE YIELD OF SHELLFISH MEATS PER BUSHEL ARE BASED ON U. S. STANDARD BUSHELS OF 2,150.4 CUBIC INCHES CAPACITY. PRIOR TO 1939, YIELDS WERE BASED ON BUSHELS OF THE SIZE PRESCRIBED BY INDIVIDUAL STATE REGULATIONS.

THE SEED OYSTER FISHERY IN THE CHESAPEAKE BAY STATES WAS PROSECUTED ONLY IN VIRGINIA WHERE 728 FISHERMEN, USING 23 MOTOR VESSELS, 262 MOTOR BOATS, 29 OTHER BOATS, AND 628 TONGS, TOOK 980,600 BUSHELS OF SEED OYSTERS, VALUED AT \$245,180 FROM PUBLIC BEDS. OF THE TOTAL NUMBER OF PERSONS FISHING FOR SEED OYSTERS 684 ARE DUPLICATED AMONG THOSE FISHING FOR MARKET OYSTERS OR OTHER SPECIES. SIMILARLY, THE FOLLOWING CRAFT AND GEAR ARE DUPLICATED: 1 VESSEL, 262 MOTOR BOATS, 29 OTHER BOATS, AND 584 TONGS.

POTOMAC RIVER SHAD AND ALEWIFE FISHERY ⁸

The most recent year for which data are available on the catch of shad and alewives in the Potomac River is for 1942. During that year 104,076 shad, valued at \$28,578 to the fishermen, and 6,702,050 alewives, valued at \$36,453, were taken in the Potomac River waters by commercial fishermen.

Aside from that of 1941, the 1942 shad catch was the lowest ever recorded. In former years the catch has reached as high as three-quarter million fish, as was the case in 1932, however, the catch since 1934 has never exceeded 200,000 fish.

Statistics on the catch of shad and alewives in the Potomac River are also included in the catch data for Maryland and Virginia.

⁸ The reader is referred to Section 11 of this document for an account of the years for which surveys of this fishery have been made.

SECTION 5.- SOUTH ATLANTIC AND GULF FISHERIES

(South Atlantic, Area XXIV; Gulf, Area XXV)⁹

The most recent complete fishery statistics for the South Atlantic and Gulf States (North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas) are those collected for the year 1940. In that year the yield of the commercial fisheries amounted to 575,533,400 pounds, valued at \$14,644,895 to the fishermen, representing a decrease of 8 percent in quantity but an increase of 5 percent in value as compared with the catch in 1939. Detailed statistics of these fisheries for 1940 appear in Statistical Digest No. 4, entitled "Fishery Statistics of the United States, 1940". A summary of these fisheries appears in the following tables.

⁹ These numbers were assigned to these areas by the North Atlantic Council on Fishery Investigations. While the catch of fishery products in Lake Okeechobee is included in the Florida catch tables, the catch of the Mississippi River and tributaries does not appear in this section. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data were collected, the reader is referred to Section 11 of this document entitled "Statistical Survey Procedure".

TARPON SPRINGS SPONGE FISHERY ¹⁰

During 1943, a total of 217,355 pounds of sponges, valued at \$2,305,079, were sold on the Exchange at Tarpon Springs, Florida. This was an increase of 18 percent in volume and 36 percent in value as compared with the transactions in 1942, which amounted to 184,280 pounds, valued at \$1,700,247.

Sales of sponges on the Exchange during 1943 were as follows: large wool, 50,050 pounds, valued at \$537,776; small wool, 37,044 pounds, \$463,914; wool rags, 75,312 pounds, \$1,031,382; yellow, 14,817 pounds, \$97,123; and grass, 40,132 pounds, \$174,884. In comparison, the sales during 1942 were as follows: large wool, 22,740 pounds, valued at \$290,161; small wool, 28,635 pounds, \$300,504; wool rags, 105,234 pounds, \$942,818; yellow, 5,413 pounds, \$43,704; and grass, 22,258 pounds, \$123,060.

Data on the quantity and value of sponges sold outside the Exchange and at other points in Florida are not available.

¹⁰ The reader is referred to Section 11 of this document for an account of the years for which surveys of this fishery have been made.

SECTION 6.- PACIFIC COAST FISHERIES ¹¹

The yield of the commercial fisheries of the Pacific Coast States (Washington, Oregon, and California) during 1943 amounted to 1,453,263,200 pounds, valued at \$57,322,690 to the fishermen. This represents an increase of 6 percent in volume and 16 percent in value as compared with the 1942 catch. The fisheries gave employment to 23,108 fishermen as compared with 21,047 in 1942. Of the total number of fishermen in 1943, 8,348 were employed on vessels and 14,760 in the boat and shore fisheries.

Canned products produced in 1943 were valued at \$57,094,078 to the processor and by-products, \$33,811,917, representing a decrease of 13 percent in the value of canned goods but an increase of 30 percent in the value of byproducts as compared with 1942. The production of packaged fish (fresh and frozen fillets and steaks) in Washington and Oregon was valued at \$3,210,140. No data were collected on the packaged fish industry in California for this year.

¹¹ Data on the operating units and catch of the fisheries of the Pacific Coast States have been taken largely from statistics collected by the various State agencies. Supplementary surveys, compilations, and analyses, have been made by agents of this Service in order that the figures may be presented in a manner comparable with those of other sections. While statistics on the fisheries of California are for the calendar year, those for Oregon and Washington are for the fiscal year ending March 31, 1944, except that statistics of the halibut fishery for Washington are for the calendar year. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected, the reader is referred to Section 11 of this document entitled, "Statistical Survey Procedure".

^{1/} INCLUDES THE CATCH TAKEN OFF LATIN AMERICA.

NOTE: PRIOR TO 1931, THE POUNDAGE OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES REPORTED FOR WASHINGTON AND OREGON REPRESENTED THE DRESSED WEIGHT OF THE FISH LANDED. BEGINNING WITH THE DATA FOR 1941, ALL CATCH STATISTICS ARE SHOWN IN ROUND WEIGHTS. THE LANDED WEIGHT OF LINGCOD, SABLEFISH, AND ROCKFISHES (EXCEPT IN THE OTTER TRAWL FISHERIES IN WHICH THE FISH ARE LANDED ROUND) WAS CONVERTED TO ROUND WEIGHT BY MULTIPLYING THE DRESSED WEIGHT BY THE FACTOR 1.43. THE FACTOR USED TO CONVERT HALIBUT FROM MARKET WEIGHT WAS 1.33. THE POUNDAGE AND VALUE OF THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDE THE FOLLOWING ITEMS OF LIVERS AND VISCERA: GRAYFISH LIVERS, 3,408,695 POUNDS, VALUE AT \$1,445,526; HALIBUT LIVERS, 335,332 POUNDS, VALUE AT \$319,599; LINGCOD LIVERS, 132,244 POUNDS, VALUE AT \$250,128; RATFISH LIVERS, 173,490 POUNDS, VALUE AT \$81,674; ROCKFISH LIVERS, 54,427 POUNDS, VALUE AT \$106,969; SABLEFISH LIVERS, 35,499 POUNDS, VALUE AT \$33,745; SOUTHERN SHARK LIVERS, 225,800 POUNDS, VALUE AT \$112,900; WHALE LIVERS, 54,267 POUNDS, VALUE AT \$1,243; HALIBUT VISCERA, 575,643 POUNDS, VALUE AT \$176,643; LINGCOD VISCERA, 111,700 POUNDS, VALUE AT \$16,755; AND SABLEFISH VISCERA, 139,410 POUNDS, VALUE AT \$24,824. THE VALUE OF THESE LIVERS AND VISCERA AMOUNTED TO \$5,721,893. SIMILAR DATA FOR CALIFORNIA ARE NOT AVAILABLE. MOST OF THE CARCASSES OF DOGFISH AND SOUFFIN SHARK WERE NOT LANDED, BUT WERE DISCARDED AT SEA AFTER REMOVAL OF THE LIVERS.

- 1/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED. THE GRAYFISH TAKEN IN PUGET SOUND DISTRICT YIELDED 2,662,690 POUNDS OF LIVERS, VALUED AT \$1,224,837; AND THE SOUFFIN SHARKS, 415,300 POUNDS OF LIVERS, VALUED AT \$1,889,615. IN ADDITION, THE ABOVE CATCH YIELDED 314,738 POUNDS OF HALIBUT LIVERS, VALUED AT \$299,001; 103,921 POUNDS OF LINGCOD LIVERS, VALUED AT \$207,842; 173,490 POUNDS OF RATFISH LIVERS, VALUED AT \$8,674; 69,105 POUNDS OF ROCKFISH LIVERS, VALUED AT \$69,705; 24,412 POUNDS OF SKATE LIVERS, VALUED AT \$1,221; 575,648 POUNDS OF HALIBUT VISCERA VALUED AT \$126,643; 111,700 POUNDS OF LINGCOD VISCERA, VALUED AT \$16,755; AND 139,410 POUNDS OF SABLE-FISH VISCERA, VALUED AT \$34,352.
- 2/ STATISTICS ON THE CATCH OF SALMON, EXCEPT THOSE TAKEN BY TROLL LINES, ARE REPORTED TO THE STATE IN NUMBER OF FISH RATHER THAN IN POUNDS. THE FACTORS USED IN THE ABOVE TABLE FOR CONVERTING NUMBER OF SALMON TO WEIGHT IN POUNDS WERE AS FOLLOWS: CHINOOK OR KING, 18.6 POUNDS; CHUM OR KETA, 10 POUNDS; PINK, 5.75 POUNDS; RED OR SOCKEYE, 6.8 POUNDS AND SILVER OR COHO, 8.4 POUNDS.
- 3/ FISHED ONLY ON INDIAN RESERVATIONS.
- 4/ THE WEIGHTS OF CRABS SHOWN ARE BASED ON AN AVERAGE OF 20 POUNDS PER DOZEN.
- 5/ STATISTICS ON HARD CLAMS ARE BASED ON YIELDS OF 25 PERCENT OF EDIBLE MEATS.
- 6/ STATISTICS ON OYSTERS SHOWN ARE BASED ON YIELDS OF 18 PERCENT EDIBLE MEATS FOR NATIVE OYSTERS AND 10 PERCENT FOR PACIFIC OYSTERS.
- 7/ THE WEIGHT OF BAY SCALLOPS IS BASED ON 8.5 POUNDS OF MEATS PER GALLON OR A YIELD OF 17 PERCENT EDIBLE MEATS.

1/ CAUGHT ALMOST ENTIRELY FOR THE UTILIZATION OF THE LIVERS IN THE EXTRACTION OF VITAMIN OILS. MOST OF THE CARCASSES WERE DISCARDED. THE GRAYFISH TAKEN IN THE COASTAL DISTRICT OF WASHINGTON YIELDED 185,952 POUNDS OF LIVERS, VALUED AT \$85,538, AND THE SOUFFIN SHARK YIELDED 41,905 POUNDS OF LIVERS, VALUED AT \$190,667. IN ADDITION LINGCOD YIELDED 5,934 POUNDS OF LIVERS, VALUED AT \$11,868; ROCKFISHES YIELDED 21,834 POUNDS OF LIVERS, VALUED AT \$8,734; AND THE SABLEFISH YIELDED 387 POUNDS OF LIVERS, VALUED AT \$387.

2/ FISHED ONLY BY INDIANS ON RESERVATIONS.

3/ STATISTICS ON THE CATCH OF SALMON, EXCEPT THOSE TAKEN BY TROLL LINES ARE REPORTED TO THE STATE IN NUMBER RATHER THAN IN POUNDS. THE FACTORS USED IN THE ABOVE TABLE FOR CONVERTING SALMON TO WEIGHT IN POUNDS WERE AS FOLLOWS: CHINOOK OR KING, 22.3 POUNDS; CHUM OR KETA, 10.5 POUNDS; RED OR SOCKEYE, 4 POUNDS; SILVER OR COHO, 10.6 POUNDS; AND STEELHEAD TROUT, 9 POUNDS.

4/ STEELHEAD TROUT SHOWN IN THIS TABLE WERE TAKEN ENTIRELY BY INDIANS ON RESERVATIONS.

5/ THE WEIGHT OF CRABS SHOWN ABOVE IS BASED ON A WEIGHT OF 22 POUNDS PER DOZEN.

6/ THE WEIGHT OF RAZOR CLAMS IS SHOWN IN POUNDS OF EDIBLE MEATS, BASED ON A YIELD OF 42 PERCENT OF THE ROUND WEIGHT.

7/ THE STATISTICS ON OYSTERS USED IN THIS TABLE ARE BASED ON YIELDS OF 12 PERCENT OF EDIBLE MEATS.

LANDINGS BY HALIBUT FLEET AT SEATTLE, WASH.

It has been customary in previous reports of this series to include detailed statistics on the receipts of fishery products by wholesale dealers in Seattle, Washington. This year, however, only a summary of the data is included in this report. For detailed information on these receipts the reader is referred to the monthly fishery summaries released by the Seattle Market News Office of this Service.

According to the reports issued by the Seattle office, a total of 58,746,260 pounds of fishery products, valued at \$11,203,889, were handled by Seattle wholesale dealers during 1943. These receipts are exclusive of quantities received by rail or transporting vessels from Alaska or Canada. The 1943 receipts represent an increase of 7 percent in volume and 40 percent in value as compared with the returns of the preceding year.

Landings by vessels of the United States halibut fleet, including livers and viscera, amounted to 16,465,711 pounds, valued at \$3,320,463 representing a decrease of 10 percent in volume but an increase of 18 percent in value as compared with the 1942 landings.

A summary of the 1943 halibut landings at Seattle by the United States halibut fleet is contained on the following page. For additional information on the Pacific Coast halibut fishery the reader is referred to Section 10 of this document, page 199, entitled "Review of Certain Major Fisheries".

NOTE:--STATISTICS SHOWN DO NOT INCLUDE LANDINGS AT PORTS SOUTH OF SEATTLE WHICH AVERAGE LESS THAN 3 PERCENT OF THE ANNUAL PACIFIC COAST CATCH. THE 1943 HALIBUT SEASON OPENED ON APRIL 16 AND CLOSED ON SEPTEMBER 8. THE PERMIT SEASON FOR THE RETENTION OF HALIBUT CAUGHT INCIDENTALLY TO OTHER FISHING CONTINUED UNTIL NOVEMBER 30.

SECTION 7.- LAKE FISHERIES ¹²

In 1943, the yield of the fisheries of the Great Lakes and the International Lakes of Northern Minnesota in the United States and Canada, amounted to 104,861,600 pounds, representing an increase of 7 percent as compared with the catch in the preceding year.

Considering the fishery of United States craft only, the catch amounted to 78,221,300 pounds, valued at \$12,267,602, which was an increase of 4 percent in volume and 42 percent in value as compared with the 1942 catch.

In 1940, the latest year for which a complete survey was made, the Lake fisheries gave employment to 5,142 fishermen.

¹² The statistics of the catch were obtained principally from records of the various State agencies and from the Dominion Bureau of Statistics, Ottawa, Canada. The data for the operating units (fishermen, vessels, boats, and gear) of the United States, which are for 1940, were obtained largely by agents of this Service in a special survey, although State records in several instances were very helpful in this work. In all cases, the statistics collected are for the calendar year except for Rainy Lake, Lake of the Woods, and Namakan Lake in Minnesota, which are for two seasons; for Lake of the Woods, the seasons are from June 1 to November 1 and December 1 to April 1; and for Rainy and Namakan Lakes the seasons are from May 15 to November 1 and December 1 to April 1. The catches for these two seasons, in the order named, have been combined to constitute a year. The quantity of fish taken in these Lakes between January 1 and April 1 is estimated to be less than 3 percent of the total catch. For a description of the methods used in collecting and compiling these statistics and an account of the years for which data have been collected the reader is referred to Section 11 of this document entitled "Statistical Survey Procedure".

ALL OF THE PERSONS ENGAGED IN THE PREPARATION OF FISHERMEN'S PREPARED PRODUCTS AND ALL OF THE PERSONS SHOWN ON TRANSPORTING CRAFT HAVE BEEN INCLUDED AS FISHERMEN. THIS SHOULD BE CONSIDERED WHEN COMPUTING THE TOTAL NUMBER OF PERSONS IN THE FISHERY INDUSTRIES EXCLUSIVE OF DUPLICATION.

SECTION 8.- MISSISSIPPI RIVER FISHERIES

The most recent complete catch statistics of the fisheries of the Mississippi River and tributaries are those collected for the year 1931. ("Fishery Industries of the United States, 1932," by R. H. Fiedler, Appendix III to the Report of the Commissioner of Fisheries for the fiscal year 1933.) The yield of fishery products in 1931 amounted to 82,382,523 pounds, valued at \$2,897,357, which is a decrease of 22 percent in quantity and 36 percent in value as compared with the quantity and value of the catch in 1922, when the preceding survey was made.

A summary of these fisheries in 1931 was published in the Bureau of Fisheries annual reports entitled, "Fishery Industries of the United States," by R. H. Fiedler, for the years 1933 to 1938, inclusive. Information regarding the production of cured fishery products in the Mississippi River area in 1931 and of mussel-shell products for 1943 appear in the following table.

1/ DATA ARE FOR 1943.

2/ INCLUDES SMOKED BUFFALOFISH AND TULLIBEES.

3/ THE PRODUCTION OF THIS ITEM HAS BEEN INCLUDED UNDER "UNCLASSIFIED, SMOKED".

4/ INCLUDES SMOKED EELS, SALMON, AND STURGEON.

5/ INCLUDES SMOKED BUFFALOFISH, BUTTERFISH, CARP, LAKE TROUT, PADDLEFISH, SABLEFISH, SALMON, TULLIBEES, AND WHITE FISH.

NOTE:--UNLESS OTHERWISE INDICATED, THE DATA ARE FOR 1931. THE TOTAL VALUE OF THE MANUFACTURED PRODUCTS FOR THE STATES OF THE MISSISSIPPI RIVER AND TRIBUTARIES WAS AS FOLLOWS: BY MANUFACTURING ESTABLISHMENTS, \$3,531,617, AND BY FISHERMEN, \$8,751. SOME OF THE PRODUCTS MAY HAVE BEEN MANUFACTURED FROM FISHERY PRODUCTS IMPORTED FROM ANOTHER STATE OR A FOREIGN COUNTRY; THEREFORE, THEY CANNOT BE CORRELATED DIRECTLY WITH THE CATCH WITHIN THE STATE.

SECTION 9- ALASKA FISHERIES¹³

The commercial catch of fishery products in Alaska during 1943 amounted to 594,644,671 pounds, valued at \$20,505,941 to the fishermen, representing an increase of 14 percent in volume and 14 percent in value as compared with the catch in 1942. These gains were due largely to the greatly increased catches of herring in Central Alaska and red salmon in the Western district. The 1943 catch of pink salmon in Southeast Alaska showed a substantial decrease from that of 1942, due largely to the cyclical nature of the pink salmon runs in that district. The Alaska fisheries gave employment to 23,711 persons during 1943 as compared to 23,216 in 1942, an increase of 2 percent. No whaling operations were conducted in Alaska during 1943.

¹³ Statistics on the fisheries of Alaska are collected and compiled by the Alaska Division of this Service. A summary of these statistics appears in this section. For detailed information on the fisheries of Alaska, the reader is referred to Statistical Digest No. 10, entitled "Alaska Fishery and Fur Seal Industries: 1943", by Ward T. Bower.

✓ ROUND WEIGHTS OF FISH TAKEN BY HALIBUT VESSELS WERE OBTAINED BY MULTIPLYING REPORTED WEIGHTS, WHICH REPRESENT POUNDAGE OF FISH AFTER Evisceration and removal of heads by the following factors: HALIBUT, 1.33; and SABLEFISH, LINGCOD, AND ROCKFISHES, 1.43. VALUES INCLUDE PAYMENTS RECEIVED FOR LIVERS AND VISCERA AS FOLLOWS: HALIBUT, \$387,710; SABLEFISH, \$216,184; LINGCOD, \$595; AND ROCKFISH, \$640. MISCELLANEOUS LIVERS AND VISCERA, NOT SEGREGATED AS TO SPECIES, ARE LISTED FOR VALUE ONLY, AS IT IS ASSUMED ROUND WEIGHTS OF THE FISH ARE REPORTED ELSEWHERE.

NOTE:--PRIOR TO 1943 THE ENTIRE CATCH OF HALIBUT, SABLEFISH, LINGCOD, AND ROCKFISHES TAKEN BY UNITED STATES VESSELS IN THE HALIBUT FLEET WHICH LANDED FIFTY PERCENT OR MORE OF THEIR CATCH AT ALASKAN PORTS AND PRINCE RUPERT WAS CREDITED TO ALASKA, EVEN THOUGH A PORTION OF THE CATCH WAS LANDED AT SEATTLE. SIMILARLY THE CATCH CREDITED TO THE PUGET SOUND DISTRICT OF WASHINGTON INCLUDED THE ENTIRE CATCH BY HALIBUT VESSELS WHICH LANDED MORE THAN FIFTY PERCENT OF THEIR CATCH AT SEATTLE EVEN THOUGH A PORTION OF THE FISH TAKEN WERE LANDED AT ALASKAN PORTS AND PRINCE RUPERT. BEGINNING WITH DATA FOR 1943 THE ENTIRE CATCH LANDED BY HALIBUT VESSELS AT ALASKAN PORTS AND PRINCE RUPERT WAS CREDITED TO ALASKA.

SECTION 10.- REVIEW OF CERTAIN MAJOR FISHERIES

There is presented in this section of the Digest complete data on the catch of certain of the major species of fishery products taken commercially in the United States and Alaska. These data are included in the detailed catch tables for the various States but have been republished in individual fishery tables in this portion of the report. This has been done in order to provide readers with a single source of catch data for the halibut, mackerel, menhaden, pilchard, tuna, and whale fisheries. Most of these species are taken by fishermen operating in several States or districts, and a number are taken by several types of fishing gear. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data on the catch of the species mentioned above. The information contained in this section includes the volume and value of the catch by individual types of gear, and by States or districts.

PACIFIC COAST HALIBUT FISHERY

The halibut fishery of the Pacific Coast, which is prosecuted by United States (including Alaskan) and Canadian vessels, ranks as one of the foremost fisheries of that section. During 1943, the total catch of halibut by craft of both nationalities amounted to 52,010,000 pounds, valued at \$9,699,000. This is an increase of 6 percent in volume, and 35 percent in value, as compared with the returns for the previous year. Of the total catch in 1943, 75 percent was taken by United States craft and 25 percent by Canadian craft. Considered according to ports of landing, 25 percent was landed at Seattle, Washington, 48 percent at Canadian ports, and 27 percent at ports in Alaska.

The capture of halibut off the Pacific Coast of North America is regulated by the International Fisheries Commission, appointed under the treaty between the United States and Canada for the preservation of the North Pacific halibut fishery. The 1943 halibut season opened on April 16, one day earlier than in the previous year. Halibut fishing in Areas I and II (South of Cape Spencer) closed on June 20, 9 days earlier than in 1942, and constituted the shortest halibut season in these two areas. Halibut fishing in Areas III and IV (West of Cape Spencer) ended September 8, as compared with September 25 in 1942. The main reasons for the shorter season were; the increased number of craft in the fishery; the reduction in the voluntary tie up period between trips; and the larger trip limits per fishermen.

NOTE:--THESE STATISTICS ARE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL FISHERIES COMMISSION FOR WASHINGTON AND BRITISH COLUMBIA, AND BY FISH AND WILDLIFE AGENTS FOR ALASKA. THE WEIGHTS OF THE ABOVE SPECIES REPRESENT THE FISH AFTER EVISCEATION AND REMOVAL OF HEADS.

THE FLEET CLASSIFICATION HAS BEEN ARBITRARILY APPLIED BY INCLUDING IN THE "WASHINGTON FLEET" ALL UNITED STATES AND ALASKA VESSELS THAT LAND MORE THAN HALF THEIR CATCH IN THAT STATE. ALL OTHER UNITED STATES AND ALASKA VESSELS OF THE HALIBUT FLEET WERE INCLUDED IN THE "ALASKA FLEET."

NOTE:--IN ADDITION TO THE ABOVE, THERE WERE 2,358,723 POUNDS OF HALIBUT, SABLEFISH, LINGCOD, ROCKFISH, GRAYFISH AND SOUPFIN SHARK LIVERS VALUED AT \$4,287,371 LANDED BY THE COMBINED FLEETS AT PACIFIC COAST PORTS DURING 1943. HALIBUT VESSELS IN THE COMBINED FLEETS ALSO LANDED 1,410,403 POUNDS OF HALIBUT, SABLEFISH AND LINGCOD VISCERA VALUED AT \$592,368 DURING THE SAME PERIOD.

INCLUDED IN THE ABOVE WERE 626,395 POUNDS OF HALIBUT, SABLEFISH, LINGCOD, ROCKFISH, GRAYFISH AND SOUPFIN SHARK LIVERS VALUED AT \$889,921 AND 519,184 POUNDS OF VISCERA VALUED AT \$218,056 WHICH WERE CAUGHT BY CANADIAN VESSELS AND LANDED IN CANADIAN PORTS.

THESE STATISTICS ARE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL FISHERIES COMMISSION FOR WASHINGTON AND BRITISH COLUMBIA, AND BY FISH AND WILDLIFE SERVICE AGENTS FOR ALASKA. THE TABULATION DOES NOT INCLUDE LANDINGS AT PORTS SOUTH OF SEATTLE, WASHINGTON, WHICH AVERAGE LESS THAN 3 PERCENT OF THE ANNUAL PACIFIC COAST CATCH.

WHALING

In the 1943 whaling season only one United States firm, the Maritime Industries, Inc., which operated a shore station at Fields Landing, California, engaged in the whale fishery. Using 2 killer boats, 29 whales were taken. The catch consisted of 19 finback whales, 5 humpbacks, 3 sperm, and 2 sei whales. In 1942, operating 1 killer boat, the company took 26 whales, the catch consisting of 12 humpback whales, 10 finbacks, 3 sperm and 1 sei whale.

Whale products handled by this firm during 1943 consisted of 34,598 gallons of whale oil, valued at \$27,438; 3,366 gallons of sperm oil, valued at \$2,968; 115,268 pounds of fresh meat, valued at \$9,666; 31,520 pounds of bone, valued at \$670; 26 tons of meal, valued at \$1,674; and 13,080 pounds of livers, valued at \$1,667. In the previous year, whale products valued at \$39,533 were produced at this plant.

SECTION 11.- STATISTICAL SURVEY PROCEDURE

This report is another in a series of annual statistical reports containing data on the quantity and value of the commercial catch of fishery products and the numbers of persons and operating units engaged in the commercial fisheries of the United States and Alaska. The report has been prepared and published by the Division of Commercial Fisheries, Fish and Wildlife Service, Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Departments of the Interior, Commerce, Commerce and Labor, and the United States Fish Commission.

In order that those who use the statistical data contained in this and previous reports of the Division may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over a period of years, and changes in method have been made at times when such changes have appeared to work toward general improvement. While the surveys in the several sections are not made in the same manner, owing to varying facilities and records in different States, an attempt has been made to make the data collected by various methods in the producing areas comparable with respect to the same year as well as over a period of years. Throughout the entire plan it has been the intention to coordinate State and Federal fishery statistical work so that there will be as little duplication of effort as possible.

The procedure will be discussed under two main heads, "Sectional surveys" and "Local and special surveys".

SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the statistical personnel of the Division. In the course of these surveys, the field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employment in the fisheries, quantity of fishing gear, number and classification of fishing and transporting craft, employment in wholesale and manufacturing establishments, and the volume and value of manufactured fishery products and byproducts. The various phases of these surveys are discussed in detail in the sections following.

History. —The first comprehensive statistical survey of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the United States National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in this early survey and recorded in Mr. Goode's reports. The survey for 1880, however, did not include the Mississippi River and tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for various of the intervening years between 1880 and 1908 and from 1909 to 1928. In 1908 a survey of the entire United States was made. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for all sections, excluding the Mississippi River and its tributaries, were collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Complete canvasses for catch and operating units were made of the Pacific Coast States for the years 1933 to 1943, inclusive; the Chesapeake States for the years 1933 to 1942, inclusive; the New England and Middle Atlantic States for 1933, 1935, for each year from 1937 to 1940, inclusive, and for 1942 and 1943; and the South Atlantic, Gulf, and Lake States for 1934, and for the years 1936 to 1940, inclusive. Data on the wholesale and manufacturing industries were collected in all of the surveys from the years 1932 to 1940, but were not collected for the years 1941 to 1943, inclusive. In these years the lack of personnel precluded collection of data on wholesale and manufacturing firms except those data collected as a part of the canned fishery products and byproducts surveys. Complete data on the catch of the Lakes States also were collected for 1933, and 1935 and for the years 1941 to 1943, inclusive.

Following is a summary indicating the years for which statistics were collected on the fisheries and fishery industries in the various sections. Figures for the more recent years are available from the Service in bulletin form, but data for the earlier years are available only in the various printed reports of the Service. These reports are available for reference in the Department of the Interior library and at many public libraries.

In the New England States, statistics on the catch of the marine fisheries, and those conducted in the coastal rivers and bays of these States, were collected for the years 1880, 1887 to 1889, inclusive, 1898, 1902, 1905, 1908, 1919, 1924, 1928 to 1933, inclusive, 1935, 1937 to 1940, inclusive, and 1942 and 1943. For most of these years data on operating units and wholesale and manufacturing trade also were collected. In addition to the above, partial statistical surveys were made for the entire section in 1892; the fisheries in Maine, New Hampshire, and Massachusetts for the fiscal year 1897; the lobster fishery for 1900 and 1913; the oyster fishery for 1910; the shad and alewife fisheries for 1896; the menhaden industry for 1912; the fisheries of Massachusetts for 1879; and the fisheries of Connecticut for 1925 and 1926.

Statistics on the catch of marine fisheries and those conducted in the coastal rivers and bays of the Middle Atlantic States were collected for the years 1880, 1887 to 1891, inclusive, 1897 and 1898, inclusive, 1901, 1904, 1908, 1921, 1926, 1929 through 1933, inclusive, 1935, 1937 to 1940, inclusive, and 1942 and 1943. Data on operating units and wholesale and manufacturing trade also were collected for most of these years. In addition to these, a statistical survey was made of the coastal fisheries in these States in 1915; the catch in all States, except New York, in 1892; the shad and alewife fisheries in 1896; the shad fisheries of the Delaware River in 1910; the menhaden industry in 1912; the lobster fisheries in 1900 and 1913; and the oyster fishery in 1911. The years for which statistics are available on the shad fishery of the Hudson River are given in the section entitled "Shad and alewife fisheries".

In the Chesapeake Bay States, statistics on the catch of the marine fisheries and those conducted in the coastal rivers and bays of these States were collected for the years 1880, 1887 and 1888, 1890 and 1891, 1897, 1901, 1904, 1908, 1920, 1925, and for the years from 1929 to 1942, inclusive. Data on operating units and wholesale and manufacturing trade also were collected for most of these years. In addition to the above, a statistical survey was made of the crab fishery for 1915; the oyster fishery and menhaden industry for 1912; and the shad and alewife fisheries for 1896; 1909, and 1915. The years for which statistics of the shad and alewife fisheries of the Potomac River are available are given in the section entitled "Shad and alewife fisheries".

In the South Atlantic and Gulf States statistics on the catch of the marine fisheries and those conducted in the coastal rivers and bays of these States were collected for the years 1880, 1888 to 1890, inclusive, 1897, 1902, 1908, 1918, 1923, 1927 through 1932, 1934, and 1936 to 1940, inclusive. Data on operating units and wholesale and manufacturing trade also were collected for most of these years. In addition to the above, a statistical survey was made of the fisheries of these States, excluding Florida and Alabama, for 1887; the shad fishery of the South Atlantic States for 1910; the shad and alewife fisheries of the South Atlantic States for 1896; the sturgeon fishery of Florida for 1900; the menhaden industry of the South Atlantic States for 1912; the shrimp fishery for 1916; the oyster fishery of the South Atlantic States for 1910; and the oyster fishery of the Gulf States for 1911.

In the Pacific Coast States statistics on the catch of the marine fisheries and those conducted in the coastal rivers and bays of these States were collected for the years 1880, 1888, 1892, 1895, 1899, 1904, 1908, 1915, and for all of the years from 1922 to 1943, inclusive. These surveys have usually included data on operating units and wholesale and manufacturing trade. In addition to the above, statistics were obtained on the fisheries of California from 1918 to 1921, inclusive, and for the oyster fishery in 1912.

Statistics on the catch of the fisheries of the Great Lakes were collected for the years 1880, 1885, 1890, 1893, 1899, 1903, 1908, and for the years from 1913 to 1943, inclusive. Statistics of the operating units and of the wholesale and manufacturing trade were collected for most of the years for which canvasses were made from 1880 to 1908, inclusive, and in 1917 and 1922 as well as for most of the years from 1926 to 1942. In addition to the above, a survey was made of the fisheries of Lake Ontario and of certain fisheries in other lakes for the year 1897.

Statistics of the catch of the fisheries of the Mississippi River and its tributaries were collected for the years 1894, 1899, 1903, 1908, 1922, and 1931. In addition, figures have been obtained on the fisheries of Lakes Pepin and Keokuk for the years 1914 and 1917 and the years from 1927 to 1938, inclusive, and of the fisheries of the Mississippi River between Lakes Pepin and Keokuk for the years 1929 to 1938, inclusive.

Statistics also were collected on the fisheries of certain interior waters, other than the fisheries of the Great Lakes and the Mississippi River and its tributaries, for the years 1894, 1895, 1900 and 1902.

Field Personnel.—The statistics contained in this volume have been collected by a group of trained marketing specialists which comprises a part of the permanent staff of the Division of Commercial Fisheries of this Service.

Period Covered.—These specialists are assigned permanent field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. They collect statistics of fishery operations for the year preceeding that in which they are working; and since their field work occupies the greater part of the year, it is usually at least a year from the end of the calendar year for which they are collecting data until the figures are published. The data usually are collected and published on a calendar year basis, although for some States they are on a fiscal year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Beginning with 1930 and continuing to the present time, they have been collected on the basis of the calendar year.

Scope.—The scope of the coastal statistical surveys include canvasses of the commercial fisheries of the oceans and bays and of the coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics of the fisheries of the Mississippi River cover canvasses of the fisheries of the Mississippi River proper as well as all of its tributaries where commercial fishing for either fish, crustaceans, or mollusks is prosecuted. Statistics of the fisheries of the Great Lakes cover canvasses of the fisheries prosecuted in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries prosecuted in Lake Okeechobee. Surveys for statistics of the wholesale and manufacturing fishery industries cover such plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

Methods of Collection.—Several methods for the collection of fishery statistics are employed, each of which has been carefully studied to obtain the best results with the available personnel and funds. In most instances the field personnel obtain lists of the names of fishing vessels, names and numbers of motorboats, and names of owners of these craft from local custom officials. Also it usually is possible to obtain the names of licensed commercial fishermen and some statistics on the catch from State fishery agencies; from other State, county or city sources; or from private organizations.

With such preliminary records as are available for their guidance the field specialists visit each fishing community in their field unless these preliminary records are so complete that personal visits may be eliminated. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited and data are obtained from them on their purchases of fishery products. While it is impossible for the few Service representatives available for this work to interview each fisherman in a given locality, the more important ones are visited, and a sufficient number of those of lesser importance are interviewed to obtain reliable information on their production, the number of fishing craft employed, the quantity of gear operated, and the number of persons employed as fishermen.

In the Great Lakes and Pacific Coast States such exceptional cooperation has been obtained in recent years from the State fishery agencies in the collection of statistics that only fragmentary surveys need be made by the Service specialists to obtain other necessary data. Also the State fishery agencies in Maine, New York, and Maryland more recently have developed very complete statistical systems which greatly facilitate the Service surveys in these States.

As regards the fisheries of the Great Lakes and International lakes of Northern Minnesota, the Service obtains most of the catch statistics and usually the value of the catch direct from the records of the State fishery agencies. To obtain data on the number of fishermen, boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

Service statistical personnel are stationed at Seattle, Wash., and San Pedro, Calif., who survey the fisheries of the Pacific Coast States. As a rule they obtain figures on the volume of the catch from the records of the State fishery departments. The value of the catch is derived from dealers' records. In Washington and Oregon, the offshore fisheries are surveyed separately by the Service to obtain data on the number of operating units. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In the administration of the Alaska fisheries the Service obtains sworn statements concerning the activities of those prosecuting the fisheries in this area. These statements are compiled by the Alaska Division of this Service and the summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish of the Great Lakes States usually are shown in weights as landed, which may be in the round or dressed condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks and gastropods, and the round weight of crustaceans and such mollusks as squid and octopus.

Shore and vessel fisheries.—In general, statistics of the shore fisheries, as collected by the Services' representatives, include data on the number of casual and regular fishermen; number of motor and other fishing boats and accessory boats; type and quantity of gear used; and the volume, value, and method of capture of each species caught by boats (for our purpose craft of less than 5 net tons capacity are called "boats") for each locality or group of localities. This method is not followed in some sections where the availability of data collected by the States fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number of the crew, rig of vessels, net tonnage, kind and quantity of gear used, accessory boats carried, and volume, value, and method of capture of each species. For our purpose craft of 5 net tons capacity or more are called "vessels". As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of our agents collecting these data for individual vessels.

Statistics of the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not enumerated.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose these have been divided into "regular" and "casual" fishermen. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those whose principal business is something other than fishing, and who receive less than one-half of their annual compensation from fishing.

The catch of fish and shellfish is credited to the port where it is landed and the craft making the catch is credited to the locality where it landed the greatest portion of its catch during the year. Prior to the survey for 1942 it was the practice of the Service to credit the entire catch of a vessel to the principal port of landing, regardless of the actual point of landing. This policy was discontinued, however, since it quite often resulted in inconsistencies by presenting catches of certain fish in areas to which they are not common inasmuch as fishing vessels frequently operate in areas far removed from their principal fishing port. An outstanding example of this is the case of the Southern trawl fishery. In this fishery off the New Jersey, Maryland, Virginia, and North Carolina coasts, many fishing vessels from Massachusetts operate for 6 to 10 weeks during the

winter season. Prior to the survey for 1942 the catch of these fish, principally common to these waters, was credited to Massachusetts. Under the present system the catch is credited to the southern port at which it was landed and the vessel, crew, and gear are credited to the port at which the major portion of their catch was landed.

Wholesale and Manufacturing Trade.—All persons or firms engaged in the wholesale buying and selling of fishery products or who produce manufactured fishery products are surveyed under this title. Where the business of fishing and wholesaling or manufacturing is combined, that part of the business devoted to either of the latter two phases is included in the wholesale and manufacturing survey and the part devoted to fishing is included in the shore or vessel fisheries. If a wholesale business is conducted with no manufacturing and the business is so small that the full time of one man over the whole year or season is not required, it is then disregarded as a wholesale business. If commodities other than fishery products are handled, the persons engaged, and salaries and wages paid, are prorated; and only that part concerned with fishery products is included. If such a firm required less than the full time of one man over the whole year or season and if it does not manufacture, it is not included in the canvass. Retail firms that manufacture, or whose wholesale business exceeds the retail part, are included. Persons or firms engaged in the motor trucking of fishery products are included as wholesalers if they are engaged in wholesale buying and selling.

Buyers for a central firm are not canvassed as wholesale dealers unless they ship direct to the firm's customers from the buying point.

Fishermen or fishing concerns, except manufacturers, who do not buy fishery products are not included under this heading except that oyster-shucking firms are included provided shuckers are employed, irrespective of whether all or part of the oysters used are taken from the firm's privately owned beds.

Manufacturing concerns include those which prepare packaged fishery products; salted; spiced; smoked; dried, or otherwise cured fishery products; canned fishery products; or fishery byproducts.

Fishermen who manufacture are surveyed to obtain the number of persons employed and the volume and value of the products prepared.

In collecting statistics of manufacturing firms, Service representatives obtain data on the production for each plant in the areas surveyed. Such products are usually "final" and in form for consumption; however, the products may be "intermediate" and require further processing before reaching the consumer markets. An outstanding example of an intermediate product is green-salted groundfish, which almost invariably is further processed before final marketing. In reviewing the statistics of manufactured products it should be observed that intermediate products are not shown if they are prepared to the final stage in the original plant. An exception to this rule, however, is in the case of the production of mild-cured salmon, which, on account of its importance, is shown in its entirety, whether further processed in the producing plant or not. In this connection it should also be stated that several of the byproducts for which statistics are shown may be intermediate, and the plants producing the final products are not surveyed by this Service. Outstanding among such products are marine-animal oils, scrap, and meal.

Statistics of persons engaged in wholesale and manufacturing establishments are reported in three groups; proprietors, salaried employees, and wage earners. Proprietors represent those persons who devote their time to the conduct of the enterprise and receive their compensation in the form of profits. Managers of branch houses are not classified as proprietors. Salaried employees usually include those persons paid by the week or month, while wage earners usually consist of those paid on a per diem or piecework basis. This, however, is not true in all cases, since the distinction between these two groups depends primarily upon the character of the work done rather than the unit of time employed for calculating rates of pay. In general, office employees are classified as salaried employees. Plant foremen or superintendents are classified as salaried employees unless they are principally engaged in manual labor, in which case they are classified as wage earners. Other

employees, including plant workmen, usually are classed as wage earners. Active officers of corporations are classified as salaried employees. Statistics of wage earners are shown in two forms; the average number employed during the operating season; and the average number employed during the year (the monthly average for the year).

Transporting Trade.—Statistics are obtained on the number of the crew and number of boats and vessels engaged in transporting fishery products from the fishing grounds to port, or from port to port. However, if a craft is engaged in catching fish at any time of the year it is included as a fishing craft rather than as a transporter.

Publication of Data.—Statistics of employment in the fisheries, craft and gear engaged, catch and value of catch, and certain data on industries related to the fisheries are summarized according to geographic division and published in bulletin form as soon as possible after the completion of each survey. Later the figures in more detail are included in the annual reports of the Division.

Prior to 1939, data on catch by counties and operating units by counties were included in this report. Although the statistics are still collected on this basis, as well as by the waters in which the catches were made, it has not been possible since 1939 to release this material in printed form due to insufficient printing funds. The data, however, are on file in the Washington office and are, in most instances, tabulated for use in answering specific requests. It is planned to resume publication of data on catch by counties and operating units by counties when this becomes possible.

LOCAL AND SPECIAL SURVEYS

Landings at Certain Important United States Ports.—Statistics of the landings of aquatic products at Boston and Gloucester, Mass., and Portland, Maine, are obtained in a manner similar to that used in the general canvasses with the exception that an agent is permanently stationed at each of these ports. Their duties include the obtaining of figures daily on the quantity of fish landed by each fishing vessel, the value of such fish landed, information concerning the date of departure and arrival of the vessel, as well as indicating, as a result of personal interviews with the vessel captain, the grounds from which the fish were taken and the gear used in their capture. These data are forwarded to the Washington office where compilations are made. Statistics of these landings are released monthly and annually in bulletin form and detailed data are published in the annual reports of this Division. Products of American fisheries received duty free at Boston and Gloucester, Mass., and Portland, Maine, from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador, have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester, Mass., have been collected annually since 1893, and those for Portland, Maine, since June 1915. Some data are available for Boston and Gloucester prior to 1893.

Landings at New Bedford, Mass.,—Statistics on the landings at New Bedford, Mass., for 1943 were collected by the Service representatives at that port and forwarded to the Washington office for tabulation. The data were released in an annual bulletin and are included in this report. Statistics of the landings at New Bedford have been collected for each of the years following 1937.

Statistics of the Landings of Fish at Seattle, Wash.,—Data on the landings at this port are collected by the Service's representatives in that city. Landings are classified as those made by United States fishing vessels and those received by Seattle wholesale dealers. The landings credited to United States fishing vessels are made by vessels operating distinctly as primary fishing units, usually in the offshore fisheries, while those credited as received by wholesale dealers are usually products of the shore fisheries collected mainly from points in Puget Sound. They do not include fish received from Alaska or Canada, or landings made by the halibut fleet. Statistics of these landings at Seattle are released monthly and annually in bulletin form and detailed data are published in the annual reports of this Division. Statistics of the landings by fishing vessels at Seattle have been collected since June 1915 and certain data on products received by Seattle wholesale dealers since December 1915.

Shad and Alewife fisheries.—Owing to the importance of the Hudson and Potomac Rivers in the production of shad, surveys for statistics of the catch, value of the catch, and operating units are made annually. On the Potomac River similar statistics also are obtained for the alewife fishery. Much of the data required for these surveys are available from the State fishery agencies.

Statistics of the shad and alewife fisheries are not published separately in bulletin form, but a summary of the years activities is published in the annual reports of the Division.

Statistics of the shad fishery of the Hudson River are available for 1896, 1897, 1898, 1901, 1904, 1910, and from 1915 to 1943, inclusive, while data for the shad fishery of the Potomac River are available for 1896, 1901, 1904, 1909, 1915 and from 1919 to 1942, inclusive. Statistics of the alewife fishery of the Potomac River are available for 1896, 1909, 1915, and from 1919 to 1942, inclusive.

Pacific Halibut Fishery.—Statistics of the Pacific halibut fishery are obtained by the Service's personnel in Seattle, aided by Service representatives in Alaska and the International Fisheries Commission. The fleet classification has been arbitrarily applied by including in the "Washington fleet" all United States and Alaska vessels that land more than half of their catch in that State. All other United States and Alaska vessels of the halibut fleet are included in the "Alaska fleet". Monthly and annual statistical bulletins are available on this fishery, being published along with the statistics of the landings of fishery products at Seattle, Wash., and detailed statistics are published in the annual reports of the Division. Statistics of the landings of halibut at Pacific coast ports have been collected since 1925.

Canned Fishery Products and Byproducts.—Beginning in 1921, the Service has made annual surveys for statistics of the canned fishery products and byproducts industries of every section. These are begun the first week in January of each year for statistics of the production in the preceding year. The Service obtains by mail, so far as possible, the production of canned fishery products or byproducts from each plant in the United States engaged in this business. Where it is impossible to obtain reports by mail the report is obtained by personal visit by the Service's agents. They obtain statistics of the production and value of the production for each commodity by can sizes, case sizes, and trade classifications. The value shown for canned products constitutes the gross amount received by the packer at the production point, no deductions being made for commission or expenses. Statistics of the canned fishery products and byproducts produced in Alaska are received on the same statements obtained by the Alaska Division that include statistics of general fishery operations.

Annual statistical bulletins are issued on this trade, and detailed statistics of the output are published in the annual reports of the Division. In addition to the data obtained on the output of these products annually since 1921, data also usually were obtained prior to 1921 for the years the various sections were surveyed.

Packaged Fish Trade.—Statistics of the annual production and value of fish packaged in the United States are obtained as a part of the survey for the statistics of the canned fishery products and byproducts industries. These data are released in bulletin form annually and later in more detailed and adjusted form in the annual reports of the Division. Statistics of the production of packaged fish are available for 1926 and the years 1928 to 1943 inclusive.

Cold-Storage Holdings of Fish.—An arrangement has been made with the Department of Agriculture whereby statistics of the cold-storage holdings of the various species of fish and shellfish, by sections of the United States are furnished to this Service monthly. Data also are supplied on the quantity of the various species of fish frozen and the holdings of certain cured fish. Bulletins showing these statistics are issued monthly as well as annually.

Detailed cold-storage statistics also are published in the annual Statistical Digests issued by the Division. Statistics of cold-storage holdings of fishery products have been

published since 1917 and data on quantities of fish frozen, for the years from 1920 to 1925, inclusive, and from 1928 to 1943, inclusive.

Sponge Market, Tarpon Springs.—A large proportion of the total output of sponges in Florida is sold on the sponge exchange at Tarpon Springs. In view of this, the Service has obtained from a representative of the exchange annual statistics of the quantity and value of the sponges, by variety classifications, handled through it annually. Statistics of the quantity of sponges marketed by the exchange are published in bulletin form, and a summary of the year's activities is published in the annual reports of the Division. Statistics of the transactions on the sponge exchange are available for 1913, 1914, and for the years from 1917 to 1943, inclusive.

Foreign Fishery Trade.—Statistics of the foreign fishery trade are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics of all known fishery products imported or exported have been assembled in one table and published annually in the reports of the Division in recent years. For earlier years they are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

PRACTICES AND TERMS

Certain practices and terms of importance used in the compilation of fishery statistics are explained below.

Days Absent.—In computing "days absent" for vessels landing fares at the various ports, the day of arrival but not the day of departure are included; thus a vessel leaving port on the 8th of the month and returning on the 15th of the month will be shown as being absent 7 days.

Operating Units.—Operating units as referred to in this document include persons engaged in the fisheries, and craft and gear employed in the fisheries.

Vessel.—The term "vessel" refers to a craft having a capacity of 5 net tons or more.

Boat.—The term "boat" refers to a craft having a capacity of less than 5 net tons.

Incidental Catch.—The term "incidental catch" refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

Percentages.—Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, the integer is raised or lowered to make it an even number.

Converting.—Many of the figures shown in the statistical tables published herewith have been converted to thousands of pounds or dollars. In making these conversions the largest number from which a group of items is computed is raised or lowered to the nearest thousands place. The individual items are adjusted to conform to the total thus obtained.

Confidential Data.—The statistical data collected by the Division are confidential and are not released except in published form or upon approval of the Washington office. Statistics of production of wholesale and manufacturing firms are published only for commodities or geographical areas where the production of three or more concerns may be grouped. Every effort is made to publish only those figures which will not reveal individual enterprise.

CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds, for the sake of uniformity and for purposes of comparison. This presents little difficulty in the case of fish since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels,

thousands of shellfish, gallons of meats, etc. These many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States the problem becomes even more complex.

All bivalve mollusks are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production of certain other shellfish, such as crabs, in number.

Oysters.—Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf coasts is reported to Service personnel in bushels; and prior to the data obtained for the year 1930 conversion from bushels to pounds of meats was effected on the basis of a uniform yield of 7 pounds of meats to the bushel. However, investigations have shown considerable variation from this figure. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

Other Conversion Factors.—The principal other conversion factors that have been used in this report are as follows.

Crabs, soft and peelers:

To convert number of crabs to weight in pounds in New Jersey, Delaware, Maryland, Virginia, South Carolina, and Florida, divide by 4; in North Carolina, divide by 5; in Mississippi, divide by 3; and in Louisiana, divide by 2.89.

Crabs, hard:

In Rhode Island, divide by 2.79; in New York, New Jersey, Delaware, Maryland, and Virginia, divide by 3; in North Carolina, South Carolina, and Georgia, divide by 2; in Florida, divide by 2.01; in Alabama, divide by 2.4; in Mississippi, divide by 2.09; in Louisiana, divide by 2.07; and in Texas, divide by 2.11.

Crabs, rock:

In Maine and New Hampshire, divide by 3; and in Massachusetts, divide by 4.

Crabs, stone:

In all States divide by 1.04.

Crabs, horseshoe:

In all States multiply by 4.

Sponges, dried:

In Florida, convert number of bunches to weight in pounds as follows: large wool, multiply by 11; small wool, multiply by 6; wool rags, multiply by 4.68; yellow, multiply by 3; and grass, multiply by 4.

SECTION 12.- GLOSSARY OF NAMES OF FISHERY PRODUCTS

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given.

COMMON NAMES AS SHOWN IN SERVICE REPORTS	OTHER COMMON NAMES	SCIENTIFIC NAMES
ALEWIFE.....	BRANCH HERRING, WALL-EYED OR BIG-EYED HERRING.	POMOLOBUS PSEUDOHARENGUS.
AMBERJACK.....	BLUEBACK, GLUT HERRING.....	POMOLOBUS AESTIVALIS. SERIOLA SPECIES.
ANCHOVY.....		ENGRAULIS MORDAX. ANCHOVIELLA DELICATISSIMA. ANCHOVIELLA COMPRESSA.
ANGELFISH.....		POMACANTHUS SPECIES MOLACANTHUS SPECIES
BARRACUDA.....		SPHYRAENA ARGENTEA.
BLACK BASS.....	SMALLMOUTH BASS.....	MICROPTERUS DOLOMIEU.
BLUEFISH.....	LARGEMOUTH BASS.....	MICROPTERUS SALMOIDES
BLUE PIKE.....	TAILOR, SKIPJACK.....	POMATOMUS SALTATRIX
BLUE RUNNER OR HARDTAIL.....	PIKE PERCH, BLUE PICKEREL (CANADA).....	STIZOSTEDION VITREUM GLAUCUM.
BONITO.....	RUNNER.....	CARANX CRYOSUS. SARDA SARDA. SARDA CHILIENSIS.
BOWFIN.....	FRESH-WATER DOGFISH.....	AMIA CALVA. ICTIOBUS SPECIES.
BUFFALOFISH.....		LOTA MULLOSA.
BURBOT.....	LAWYER, LING.....	PORONOTUS TRIACANTHUS.
BUTTERFISH.....		RACHYCENTRON CANADUS.
CABIO.....	COALFISH, CRAB EATER, COBIA.....	EPINEPHELUS ANALOGUS (PACIFIC COAST)
CABRILLA.....	ROCK BASS.....	CYPRINUS CARPIO.
CARP.....	GERMAN CARP.....	(AMEIURUS SPECIES. ICTALURUS SPECIES.
CATFISH AND BULLHEADS.....		LEPTOPS OLIVARIS. SCOMBEROMORUS REGALIS.
CERO.....	PAINTED MACKEREL, KINGFISH.....	ALL LEUCICHTHYS EXCEPT ARTEI (IN GREAT LAKES)
CHUB.....	TULLIBEE IN CANADA; LONGJAW, BLUEFIN, BLACKFIN IN UNITED STATES.....	DECAPTERUS PUNCTATUS.
CIGARFISH.....	SCAD.....	LEUCICHTHYS ARTEI (LAKE ERIE ONLY)
CISCO.....	HERRING IN CANADA.....	GADUS MACROCEPHALUS (PACIFIC COAST).
COD.....	CODFISH.....	GADUS CALLARIAS (ATLANTIC COAST).
CRAPPIE.....	WHITE CRAPPIE.....	POMOXIS ANNULARIS.
CREVALLE.....	BLACK CRAPPIE, STRAWBERRY BASS, CALICO BASS.....	POMOXIS SPAROIDES.
CROAKER.....	JACK.....	CARANX HIPPOS.
CUNNER.....	CROCUS, HARDHEAD.....	MICROPOGON UNDULATUS.
CUSK.....	CHOGSET, BLUE PERCH, BERGALL.....	TAUTOGOLABRUS ASPERSUS.
DOLLY VARDEN TROUT.....	SALMON TROUT, BULL TROUT.....	BROSME BROSME. SALVELINUS MALMA. CORYPHAENA HIPPURUS.
DOLPHINFISH.....

SECTION 13. - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States and Alaska, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which they are taken commercially and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types of apparatus which are normally used in their capture. The gear do not necessarily appear in the order of their importance.

For more detailed information on the nomenclature of the fishery products listed below, the reader is referred to Section 12 of this publication entitled, "Glossary of Names of Fishery Products" which appears on Page 220.
