For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. . . . . Price \$2 (paper)

Fishery Statistics of the United States and Alaska are compiled and published annually to make available information on both the economic and biological aspects of the domestic commercial fisheries.

Data on the economic aspects are necessary to persons engaged in the commercial fishery and to governmental agencies concerned with its regulation and protection. Those here given cover the total catch and value by species, the yield and value of manufactured products and byproducts, the employment of men, craft, and gear in the capture of fishery products; and related information.

From the biological standpoint these data are important to sound fishery management in providing detailed information on fluctuations in the commercial catch by species, locality, and gear, and type of craft operated. They assist conservation agencies in regulating the commercial fisheries so as to produce maximum yields without depletion.

Previous statistical reports on the fishery industries were issued under the Department of the Interior in the Administrative Report series for 1938 and in the Statistical Digest series for succeeding years. Reports for preceding years were issued in the Administrative Report series of the former Bureau of Fisheries.

The following is a listing of the various Statistical Digests issued since 1939:

- No. 1 Fishery Statistics of the United States, 1939
- 2 Alaska Fishery and Fur Seal Industries, 1940
- 3 Propagation and Distribution of Food Fishes, Fiscal Year, 1941
- 4 Fishery Statistics of the United States, 1940
- 5 Alaska Fishery and Fur Seal Industries, 1941
- 6 Propagation and Distribution of Food Fishes, 1941
- 7 Fishery Statistics of the United States, 1941
- 8 Alaska Fishery and Fur Seal Industries, 1942
- 9 Propagation and Distribution of Food Fishes, 1942
- 10 Alaska Fishery and Fur Seal Industries, 1943
- 11 Fishery Statistics of the United States, 1942
- 12 Propagation and Distribution of Food Fishes, 1943
- 13 Alaska Fishery and Fur Seal Industries, 1944
- 14 Fishery Statistics of the United States, 1943
- 15 Alaska Fishery and Fur Seal Industries, 1945
- 16 Fishery Statistics of the United States, 1944
- 17 Alaska Fishery and Fur Seal Industries, 1946
- 18 Fishery Statistics of the United States, 1945
- 19 Fishery Statistics of the United States, 1946
- 20 Alaska Fishery and Fur Seal Industries, 1947
- 21 Fishery Statistics of the United States, 1947
- 22 Fishery Statistics of the United States, 1948
- 23 Alaska Fishery and Fur Seal Industries, 1948
- 24 Propagation and Distribution of Food Fishes, 1944-1948
- 25 Fishery Statistics of the United States, 1949
- 26 Alaska Fishery and Fur Seal Industries, 1949
- 27 Fishery Statistics of the United States, 1950
- 28 Propagation and Distribution of Food Fishes, 1949 and 1950
- 29 Alaska Fishery and Fur Seal Industries, 1950
- 30 Fishery Statistics of the United States, 1951
- 31 Alaska Fishery and Fur Seal Industries, 1951
- 32 Propagation and Distribution of Food Fishes, 1951 and 1952
- 33 Alaska Fishery and Fur Seal Industries, 1952
- 34 Fishery Statistics of the United States, 1952
- 35 Alaska Fishery and Fur Seal Industries, 1953
- 36 Fishery Statistics of the United States, 1953
- 37 Alaska Fishery and Fur Seal Industries, 1954
- 38 Propagation and Distribution of Food Fishes, 1953 and 1954
- 39 Fishery Statistics of the United States, 1954
- 40 Alaska Fishery and Fur Seal Industries, 1955
- 41 Fishery Statistics of the United States, 1955

## INTRODUCTION

This report contains a review of the fishery statistics for the year 1955 collected by the Branch of Commercial Fisheries during 1956. These statistics include data on the volume and value of the catch of fishery products, employment in the fisheries, quantity of gear operated, number of fishing craft employed in the capture of fishery products, and certain information of the volume and value of the production of manufactured fishery products and byproducts. County tables for the entire Atlantic and Gulf Coastal areas, with the exception of Maryland, are also presented in this publication. Data on the catch and operating units by counties are shown for these regions.

The statistical surveys conducted during 1956 for 1955 data were under the general direction of E. A. Power, Chief, Statistical Section; and C. E. Peterson. Information on the various fisheries was collected and tabulated under the supervision of Stacey Denham and Raymond Wilson. Francis Riley supervised the preparation of the report for publication and wrote most of the narrative analyses preceding each section. G. I. Sundstrom prepared most of the illustrations.

Grateful acknowledgement is made to F. Heward Bell of the International Pacific Halibut Commission for his continuous detailed review of the report and his many constructive suggestions.

Catch data for the Great Lakes were assembled by the staff of Dr. James Moffett of the Branch of Fishery Biology; and those for the fisheries of Alaska were collected by the Branch of Alaska Fisheries of the Service. Information on landings at Massachusetts ports was collected in cooperation with the Market News Section and the Branch of Fishery Biology. Data on the Hawaiian Fisheries were furnished by the Division of Fish and Game, Board of Commissioners of Agriculture and Forestry of the Territory of Hawaii.

In assembling the data on the fisheries, all appropriate records collected by the various State fishery agencies were used. In certain areas, information complete enough to be used by the statistical agents was available from State agencies, and in these States only partial surveys were conducted. Information on the means of collecting the data and an explanation of terms used may be found in Section 14 of this publication. Statistics on the imports and exports of fishery products were furnished by the Bureau of the Census

# SECTION 1 - GENERAL REVIEW

The 1955 total catch of fishery products in the United States and Alaska amounted to approximately 4,794,281,000 pounds with a dockside value of 335,778,000 dollars. Compared with the previous year, this catch represented an increase of 52.4 million pounds or 1 percent in volume but a decrease of 19.9 million dollars or 6 percent in value. The average price of fishery products paid to the fishermen decreased from 7.5 cents per pound in 1954 to 7.0 cents per pound in 1955 due mainly to increases in the catches of fish for industrial uses and lower prices received for haddock, halibut, tuna, and other food-fish items. Many of the major fisheries recorded marked decreases during 1955 and the total catch would have been below that of 1954 had there not been a noteworthy gain in the production of menhaden. These fish continued to occur in abundance off the Atlantic and Gulf Coasts during 1955 and a record catch of nearly 1.9 billion pounds was taken--almost 39 percent of the total United States and Alaska catch. Compared with the former record established in 1954, the 1955 landings of menhaden represented an increase of 130.0 million pounds. Nearly the entire production was utilized for industrial purposes with only small quantities being used for bait.

During the past 25 years, the catch of shrimp, although fluctuating yearly, has increased at an average rate of about 5 percent a year due mainly to excellent consumer demand. The continuous popularity of shrimp was primarily responsible for this fishery developing into the most valuable in the United States and Alaska during the early 1950's. In 1955 this shellfish continued to provide the greatest revenue to United States and Alaskan fishermen accounting for approximately 18 percent of the value of the total catch. Due to generally higher average prices, the value of the 1955 landings was 2 percent greater than in 1954 despite a 9 percent decline in the volume of the catch which was due mostly to periods of inclement weather during the year.

The take of Pacific sardines in 1955 amounted to nearly 146.0 million pounds which represented an encouraging increase of 9.1 million pounds compared with that of the previous year and 136.1 million pounds above the 9.5 million-pound production of 1953 which was the lowest since 1915 when the fishery was in the early stages of its development. While there were encouraging signs of sardines in Southern California waters just prior to the opening of the season on October 1, labor disputes and price controversies kept the fleet in port until November 7. When the seiners finally put to sea, the vessels were placed on small nightly catch limits which prevented a greater production.

Major fisheries recording noticeable production decreases in 1955 were tuna and tunalike fishes, salmon, Atlantic ocean perch, haddock, halibut, crabs, cod, and oysters. During 1955, the Pacific Coast States catch of tuna and tunalike fishes fell to 269.5 million pounds--about 54.0 million pounds less than landed in 1954 and 121.0 million pounds below the record 390.5 million pounds taken in 1950. The 1955 domestic landings of these species was the lowest since 1947. The controlling factor in this decrease was of an economic rather than of a biological nature as the reduced landings in 1955 were caused primarily by a phenomenal rise in frozen tuna imports, record-high inventories, labor and price disputes, and unprecedented lay-overs between trips. The 1955 Pacific salmon catch continued to indicate an alarming downward trend as production slipped to 289.9 million pounds--a decrease of 34.8 million pounds compared with the previous year. Alaska's 1955 canned salmon pack of 2.4 million cases was the smallest in the Territory since 1909 representing only 28 percent of the 1936 record pack of nearly 8.5 million cases. Chum salmon was scarce in all areas of the Northwest Pacific during 1955 and landings of this species were 57 percent below the 1954 catch. Compared with the previous year, the 1955 sockeye catch suffered a 37 percent decrease caused primarily by a poor Bristol Bay run and the expected low point of the four-year cycle of this item in the Puget Sound waters of Washington. The 1955 catch of pink salmon taken in Puget Sound waters, amounted to 31.4 million pounds--slightly less than the two preceding cycle years of 1953 and 1951.

The catch of Atlantic ocean perch in 1955 totaled approximately 157.0 million pounds representing a decrease of 24.5 million pounds compared with the previous year. The 1955 catch of haddock landed at East Coast ports of the United States amounted to approximately 135.0 million pounds. Compared with 1954, this was a decrease of 19.9 million pounds. The New England fishing industry was confronted with serious economic problems during 1955. The continued heavy imports of groundfish fillets, huge inventories of largely domestic frozen scrod haddock fillets, and labor-management disputes resulted in low ex-vessel prices which discouraged production and contributed greatly to the decreases in the catches of Atlantic ocean perch and haddock.

# GENERAL REVIEW

The 1955 North Pacific halibut landings by United States and Canadian fishing craft totaled approximately 58.9 million pounds, dressed weight. Compared with the previous year, the 1955 production was down 12.1 million pounds. The decrease was due primarily to severe weather conditions over the North Pacific fishing grounds. The catch of crabs in the United States and Alaska during 1955 totaled 135.7 million pounds. This was a decrease of 4.9 million pounds compared with that of the previous year. Practically the entire crab catch in the Chesapeake and the South Atlantic States consisted of blue crabs. Dungeness crabs accounted for almost the entire Pacific Coast States production while king crabs dominated the Alaska crab catch. The United States 1955 oyster catch amounted to 77.5 million pounds representing a decrease of 4.4 million pounds compared with 1954. A comparison of production by areas during the two-year period indicate the catch was greater on the Gulf and Pacific coasts and less for other areas in 1955. The total catch of sea herring in 1955 amounted to 172.3 million pounds registering a gain of about 3 percent compared with the 1954 catch. The production from New England waters accounted for approximately 61 percent followed by Alaska with 37 percent and the Pacific Coast area with 1 percent. The remaining 1 percent was landed in the Middle Atlantic and Chesapeake areas.

The per capita consumption of fishery products in the United States in 1955 amounted to 10.2 pounds edible weight-- somewhat less than in the previous year. The principal items consumed with respect to volume were: tuna, salmon, sardines, haddock, shrimp, ocean perch, and cod.

The following table contains recorded production for the areas in which surveys were made for the years shown and estimates for other regions. These catch figures indicate the trend of the yield and value of the domestic catch during recent years:

## UNITED STATES AND ALASKA CATCH, 1940 - 1955

<u>Year</u>	<u>Pounds</u>	<u>Value to the fishermen</u>	<u>Average Price per pound</u>
1940 . . . . .	4,059,524,000	\$98,957,000	2.44¢
1941 . . . . .	4,900,000,000	129,000,000	2.63
1942 . . . . .	3,876,524,000	170,338,000	4.39
1943 . . . . .	4,202,000,000	204,000,000	4.85
1944 . . . . .	4,500,000,000	213,000,000	4.73
1945 . . . . .	4,575,500,000	269,900,000	5.90
1946 . . . . .	4,456,000,000	310,000,000	6.96
1947 . . . . .	4,344,000,000	307,600,000	7.08
1948 . . . . .	4,575,000,000	367,000,000	8.02
1949 . . . . .	4,796,000,000	339,000,000	7.06
1950 . . . . .	4,884,909,000	343,876,000	7.04
1951 . . . . .	4,414,045,000	360,996,000	8.18
1952 . . . . .	4,418,442,000	360,135,000	8.15
1953 . . . . .	4,467,960,000	352,275,000	7.88
1954 . . . . .	4,741,843,000	355,639,000	7.50
1955 . . . . .	4,794,281,000	335,778,000	7.00

San Pedro continued as the nation's leading fishing port with respect to both volume and value of landings. Total landings in the San Pedro area during 1955, which consisted largely of tuna, sardines, and jack and Pacific mackerel, amounted to 354.4 million pounds, valued at 28.5 million dollars. Reedville, Virginia was in second place with about 310.0 million pounds consisting almost entirely of menhaden. Lewes, Delaware, also a menhaden port, followed with 308.0 million pounds. Gloucester, Massachusetts was in fourth place with landings of 254.0 million pounds, consisting largely of ocean perch, whiting, and menhaden. Port Monmouth, New Jersey; Beaufort, North Carolina; and Cameron, Louisiana-- all menhaden ports-- followed with landings of nearly 160.0 million pounds each. San Diego, California was in second place with respect to the ex-vessel value of landings with 14.8 million dollars, followed by New Bedford, Massachusetts with 12.0 million dollars. The predominance of high priced tuna in the San Diego landings and sea scallops in the New Bedford receipts accounted for the high rank of these ports with respect to value although the volume of landings was much less than at other ports.

# GENERAL REVIEW

It is estimated that the 1955 catch was marketed as follows: 1,568 million pounds (round weight basis) as fresh and frozen products; 1,039 million pounds for canning; 86 million pounds for the production of cured products; and 2,101 million pounds for manufacture into byproducts and for use as bait. About 650.0 million pounds of waste from filleting, canning, and otherwise preparing fish for market were likewise used in the manufacture of byproducts.

Canned fishery products were packed during 1955 by 387 firms in the United States, Alaska, Hawaii, Puerto Rico, and American Samoa. The pack, which amounted to 845.0 million pounds valued at 303.2 million dollars to the canners, was down 2 percent in volume and 8 percent in value compared with the previous year. Among important items canned for human food, Pacific sardines, mackerel, clams and oysters were packed in greater volume than in the previous year. However, the production of all food items was far below the record pack for the individual items. Canned fish for pet food which amounted to 5,337,449 cases (256.2 million pounds) was nearly 33 percent greater than in the previous year and established a new record.

Fishery industrial products manufactured in 199 plants in 1955 were valued at 83.3 million dollars--an increase of 1 percent compared with the previous year. Fish meal, amounting to 264,502 tons valued at 34.7 million dollars, was the principal item produced. This was the largest domestic production of fish meal in history, exceeding by 3 percent the former record of 256,967 tons established in 1954. The production of fish and fish-liver oils, amounting to 24.9 million gallons valued at 14.9 million dollars, was far below the record yield of 39.9 million gallons manufactured in 1936. Other important industrial products produced in 1955 were shell products valued at 14.5 million dollars, and fish solubles and homogenized-condensed fish, 221.8 million pounds valued at 8.4 million dollars.

The fish stick industry continued its spectacular growth which started two years earlier. In 1955 over 63.0 million pounds of sticks valued at 28.9 million dollars were manufactured in 52 plants located principally in the northeastern States. The rapid expansion of the production of fish sticks is indicated by the fact that in 1953--the first year in which sticks were marketed in volume--only 7.5 million pounds were manufactured. In 1954 production rose to 50.0 million pounds, and the 1955 yield showed a further gain of 13.0 million pounds.

During 1955, there were 418 vessels documented as fishing vessels for the first time compared with 717 in the previous year. The sharp decline was due largely to curtailed construction of shrimp vessels in the South Atlantic and Gulf States brought about by significantly lower prices for shrimp in 1954 and 1955 compared with 1953. In 1955 only 168 vessels received their first documents in these areas compared with 432 in the previous year.

## VESSELS FIRST DOCUMENT AS FISHING CRAFT, 1939 - 1955

<u>Year</u>	<u>Number</u>

1953 . . . . .	729
1954 . . . . .	717
1955 . . . . .	418

## GENERAL REVIEW

A total of 314.7 million pounds of fish and shellfish was frozen during 1955 by the 270 domestic freezing plants which reported to the Fish and Wildlife Service. This was 12.0 million pounds more than was frozen in the previous year. During 1955 there was a sharp reduction in freezings of cod, haddock, and ocean perch fillets; halibut, salmon, and shrimp. However, freezings of bait and animal food, blocks and slabs of fillets, fish sticks, and scallops showed large increases. During 1955 a study was made of the collection, tabulation, and publication of monthly cold-storage statistics. As a result of the survey, arrangements were made to undertake in January 1956 the collection of cold-storage statistics from a number of firms who had not previously furnished information on their operations. Data obtained from these firms will increase the Service's cold-storage coverage from about 90 percent of the total fishery cold-storage activity to 95 percent and will provide more complete data on freezings and holdings of shrimp and on stocks of fish sticks.

United States foreign trade in fishery products in 1955 was valued at 297.9 million dollars--an increase of 5 percent compared with the previous year. Imports were valued at 257.9 million dollars--nearly 2 million dollars more than in the previous year. They consisted largely of frozen groundfish and other fillets; frozen and canned tuna; fresh, frozen, and common and spiny lobsters; fresh and frozen shrimp; salted cod and herring; and fish meal. Exports made up principally of canned salmon and sardines and fish oils, were valued at 40.0 million dollars--27 percent greater than in 1954. Imports showing a considerable increase compared with the preceding year were frozen tuna and fresh and frozen shrimp. Sharp declines occurred in imports of fresh and frozen salmon, fresh sea herring, frozen groundfish fillets, and canned sardines. The substantial increase in exports was due principally to increased shipments of canned salmon and sardines to foreign countries. Exports of canned sardines to the Philippine Islands increased from 5.1 million pounds in 1954 to nearly 33.0 million pounds in 1955.

Complete statistical surveys covering the fisheries of the United States and Alaska were conducted in all areas for 1955. This was the first time that complete surveys of the fisheries of all areas have been undertaken in two consecutive years. Section 14 of this publication contains a chart indicating the areas for which statistical surveys have been conducted from 1880 to the present time. The 1955 survey was the fifth complete annual survey made for all sections. The first was made by the Bureau of the Census for 1908. Others were made by the former Bureau of Fisheries and the Fish and Wildlife Service for the years 1931, 1950, and 1954.

To assist persons interested in reviewing historical statistics of the domestic fisheries a bibliography has been prepared listing the sources of data on the fisheries of the various regions of the United States for the years from 1880 to 1947. It appears in Section 15 of Statistical Digest No. 21 entitled "Fishery Statistics of the United States, 1947."

Detailed summaries of the catch and operating unit data for the United States and Alaska have been previously published in Current Fishery Statistics No. 1611. Summaries of operating unit and catch statistics for each region of the United States and for Alaska also have been previously printed in the Current Fishery Statistics series of bulletins. Of importance also to those persons interested in the most recent fishery data available is the annual publication "Fisheries of the United States and Alaska, A Preliminary Review," (Fishery Leaflet 393) which is available in March of each year and contains preliminary fishery data for the previous calendar year. This publication may be obtained free from the Division of Information, United States Fish and Wildlife Service, Washington 25, D. C.

The current statistical publications containing data on the domestic fisheries are listed in Fishery Leaflet No. 432 entitled "Fishery Statistical Publications of the Fish and Wildlife Service." That publication also lists other Federal agencies, interstate commissions, and international and non-governmental sources of fishery statistics. Copies of this leaflet may likewise be obtained free from the Division of Information.

# GENERAL REVIEW

## UNITED STATES AND ALASKA CATCH, 1955 LIVE WEIGHT BASIS

In its annual summary bulletins, it has been the practice of the Service to show the catch of uni-valve and bivalve mollusks on the basis of the weight of meats. Insofar as possible, all other fish and shellfish items are shown on a live weight basis.

Since world fishery statistics published by the Food and Agriculture Organization of the United Nations represent the live weight of the catch for all items of fish and shellfish, it has been necessary for a number of years to provide that organization with information on the domestic catch of all species on a live weight basis. Data released by the Food and Agriculture Organization, therefore, indicate that the United States catch is about 1¼ billion pounds greater than the figure appearing in Fish and Wildlife Service publications. The increase is due to the inclusion of the weight of the shells of uni-valve and bivalve mollusks in the Food and Agriculture Organization figure.

It has been deemed desirable to include in this report a table showing the domestic catch of fish on a live weight basis and to publish information on the catch of fishery products in the principal countries of the world so that the relative importance of the domestic fisheries can be determined. Tables containing these data follow.

# GENERAL REVIEW

## MANUFACTURED FISHERY PRODUCTS

The production of manufactured fishery products (canned, packaged, cured, and byproducts) in the United States, Alaska, American Samoa, Hawaii, and Puerto Rico in 1955 was valued at 654.8 million dollars. This was a decrease of approximately 1 percent compared with the previous year. Canned products accounted for 46 percent of the total value; packaged fish and shellfish, 35 percent; cured fish, 6 percent; and fish and shellfish byproducts, 13 percent.

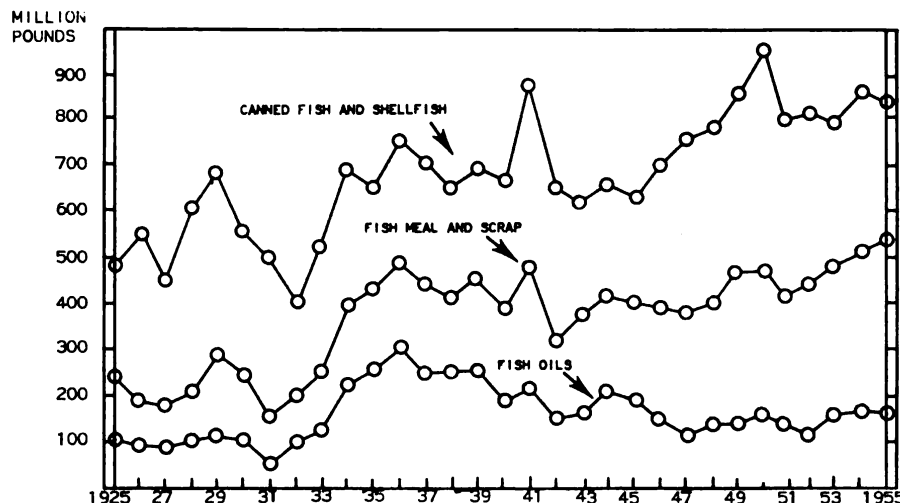

During 1955, the production of fresh and frozen packaged fish and shellfish totaled approximately 454.7 million pounds valued at 230.7 million dollars. Compared with the previous year this production was nearly the same in volume but represented a 7 percent increase in value.

The 1955 pack of canned fishery products in the areas listed above amounted to 845.0 million pounds valued at nearly 303.2 million dollars to the packers. This was a decrease of 2 percent in volume and 8 percent in value compared with the production of the previous year. The volume and value of the 1955 pack of tuna and tunalike fishes exceeded that of any other item processed for human consumption amounting to over 9.9 million standard cases valued at nearly 125.3 million dollars. This was a decrease of 951 thousand cases and 16.9 million dollars compared with the record 10.9 million-case-pack of 1954. Compared with the previous year, the 1955 pack of canned salmon (3.3 million standard cases valued at 81.4 million dollars to the canners) represented a decrease of 21 percent in volume and 12 percent in value. The 1955 pack was the smallest since 1906 when the industry was still young. The 1955 pack of Pacific sardines (1.4 million standard cases valued at over 10.0 million dollars) increased 6 percent in volume and 2 percent in value over that of the previous year. The 1955 packs of Pacific and jack mackerel (564 thousand standard cases valued at 3.3 million dollars) also registered gains with an increase of 54 percent in volume and 33 percent in value.

The 1955 production of fishery byproducts in the United States, Alaska, American Samoa, Hawaii, and Puerto Rico was valued at 83.3 million dollars--an increase of 1 percent compared with the previous year. The production of fish meal amounted to nearly 265 thousand tons valued at over 34.7 million dollars--a new record. The 1955 yield of marine-animal oils totaled about 24.9 million gallons valued at almost 14.9 million dollars but this production represented only 60 percent of the record 1936 production of 39.9 million gallons. Other important byproducts produced during 1955 were marine pearl-shell, oyster-shell, and fresh-water mussel-shell products valued at 14.5 million dollars.

The following data have been previously published in Current Fishery Statistics No. 1584

### FISH MEAL PLANT

# GENERAL REVIEW

31

## CANNED FISHERY PRODUCTS AND BYPRODUCTS

The pack of canned fishery products in the United States, Alaska, American Samoa, Hawaii, and Puerto Rico in 1955 amounted to over 845.0 million pounds valued at 303.2 million dollars to the packers. This was a decrease of 2 percent in volume and 8 percent in value compared with the production of the previous year. Decreased packs of tuna, salmon, and Maine sardines were largely responsible for the loss in production; however, record packs of pet food and clam products were canned during the year. During 1955, canned fishery products were packed in 387 plants in 27 states, the three territories mentioned above, and the Commonwealth of Puerto Rico.

During 1955 the volume and value of the pack of tuna and tunalike fishes exceeded that of any other item processed for human consumption. The canned production of these fish amounted to over 9.9 million standard cases (196.5 million pounds), valued at nearly 125.3 million dollars. This was a decrease of 951 thousand standard cases and 16.9 million dollars compared with 1954. The value of the tuna pack was 54 percent greater than that of the second place salmon. During 1955, tuna was packed in 6 states, American Samoa, Hawaii, and Puerto Rico.

The 1955 pack of canned salmon amounted to nearly 3.3 million standard cases (157.9 million pounds) valued at 81.4 million dollars to the canners. This was a decrease of 21 percent in volume and 12 percent in value compared with the production of the previous year. The 1955 pack was the smallest since 1906 when the industry was still young. The current pack represented only 37 percent of the 1936 record pack of nearly 8.7 million cases.

The pack of Pacific sardines amounted to 1.4 million standard cases valued at over 10.0 million dollars. This represented an increase of 6 percent in volume and 2 percent in value compared with the previous year. The catch of Pacific sardines during the year was only 4 percent of the 1.5 billion-pound record established in 1936.

The packs of Pacific and jack mackerel increased to 564 thousand standard cases valued at 3.3 million dollars to the processors. This was a gain of 54 percent in volume and 33 percent in value compared with the previous year. The anchovy pack continued to decline for the second consecutive year with the 1955 pack amounting to 415 thousand standard cases valued at 2.4 million dollars. This represented a decrease of 18 percent in volume and 12 percent in value compared with 1954.

The pack of canned oysters amounted to almost 600 thousand standard cases valued at 7.0 million dollars and was 25 percent greater in volume and 20 percent more valuable than the 1954 pack. Canned shrimp amounted to 901 thousand standard cases valued at 13.6 million dollars. This was a decrease of 4 percent in volume and 1 percent in value compared with the pack of the previous year.

The 1955 production of fishery byproducts in the United States, Alaska, American Samoa, and Puerto Rico was valued at 83.3 million dollars--1 percent more than the value of the previous year. The production of fish meal amounted to nearly 265 thousand tons valued at over 34.7 million dollars--a new record. No acid scrap was manufactured in 1955. The production of menhaden meal during the year amounted to almost 191 thousand tons--also a new record. A total of nearly 7 thousand tons of Pacific sardine meal was produced during 1955--over 450 tons more than in the previous year, but only 6 percent of the record yield of this meal (122 thousand tons) which occurred in 1936 when the sardine fishery was at its peak. In addition to the fish meal produced for animal feed, 41.2 million pounds of homogenized-condensed fish and 180.7 million pounds of condensed fish solubles were also manufactured for use in animal feeds.

The production of marine-animal oils in the United States and Alaska during 1955 amounted to nearly 24.9 million gallons, valued at almost 14.9 million dollars to the producers. This was an increase of 14 percent in volume compared with 1954, but this production represented only 60 percent of the record 1936 production of 39.9 million gallons.

Other important byproducts produced during the year were marine pearl-shell, oyster-shell, and fresh-water mussel-shell products valued at 14.5 million dollars. Byproducts were produced in 199 plants in 25 States, Alaska, American Samoa, and Puerto Rico during 1955.

## GENERAL REVIEW

### PACKAGED FISH

During 1955, the production of fresh and frozen packaged fish fillets, steaks, and split "butterfly" in continental United States totaled over 159.0 million pounds valued at nearly 44.9 million dollars. Compared with the previous year this production was a decrease of nearly 14.6 million pounds or 8 percent in volume and nearly 2.3 million dollars or 5 percent in value.

Atlantic ocean perch fillets continued to be the largest single packaged item produced. In 1955 the output of this item amounted to 47.8 million pounds. Haddock fillets with 38.3 million pounds and flounder fillets with 22.7 million pounds were second and third in volume. Atlantic ocean perch was also the most valuable fish packaged during 1955 having a total value of almost 10.9 million dollars. Haddock fillets ranked second with a value of 9.8 million dollars followed by flounder fillets valued at nearly 8.8 million dollars. Of the total packaged fish, 93 percent was filleted, 6 percent steaked, and the remaining 1 percent, split "butterflied."

It was estimated that approximately 469.0 million pounds of fish were used to manufacture the 159.0 million pounds of packaged fish produced in 1955.

Data in this section cannot be correlated directly with that information published in the section on Manufactured Fishery Products, as that section contains a small production in Alaska which is not included in the following tables. Preliminary data on the production of packaged fish during 1955 were previously published in Current Fishery Statistics No. 1287.

#### PRODUCTION OF PACKAGED FISH, 1955

# GENERAL REVIEW

## FROZEN FISH TRADE

A total of 314.7 million pounds of fishery products was frozen during 1955 by approximately 270 domestic freezing plants which reported their activities to the U. S. Fish and Wildlife Service. This was an increase of 12.0 million pounds or 4 percent compared with the freezings of the previous year. It was estimated that a catch of approximately 505.0 million pounds of fish and shellfish was required to produce the 314.7 million pounds of round, dressed, and drawn fish, fish fillets, and packaged shellfish frozen during 1955. Of the total, 251.9 million pounds consisted of fish and 62.8 million pounds, shellfish. Average monthly holdings of frozen fishery products amounted to 164.4 million pounds, an increase of 1.7 million pounds compared with the average of the previous year.

Salt-water fish comprised 79 percent of the total freezings during 1955, while shellfish contributed 20 percent and fresh-water fish the remaining 1 percent. Freezings of fillets from salt-water species totaled 79.7 million pounds compared with 96.3 million pounds in 1954.

Six items accounted for 71 percent of the total poundage frozen during the year. These were as follows: shrimp, 16 percent; bait and animal food, 13 percent; ocean perch fillets, 12 percent; headed and gutted whiting, 11 percent; fish sticks or pieces, 10 percent; and halibut (dressed and fillets), 9 percent.

According to geographical sections, the New England States led all others in quantity of fishery products frozen, accounting for 54 percent of the total. The South Central Area ranked second with 15 percent, followed by the Pacific Coast States with 11 percent, and Alaska with 10 percent.

Data on the holdings and freezings of fishery products for 1955 have been previously published in Current Fishery Statistics No. 1276. Detailed data are published monthly in the Frozen Fish bulletin of the Current Fishery Statistics series.

### PRODUCTION OF FROZEN FISHERY PRODUCTS, 1931 - 1955

## HOLDINGS

Stocks of frozen fishery products during 1955 reached a peak of 194.3 million pounds on January 1. The low point for holdings during 1955 was reached on April 30, when 122.7 million pounds were in storage. Average holdings of fishery stocks in 1955 reached a new high with a monthly average of 164.4 million pounds, an increase of 1 percent compared with the previous year. Ten years earlier in 1945 average holdings amounted to 84.7 million pounds. According to geographical distribution of average monthly holdings, the New England States ranked first, followed by the Middle Atlantic States and the Pacific Coast States.

## COLD-STORAGE HOLDINGS OF CURED FISH

During 1955, monthly cold-storage holdings of cured herring averaged 8.5 million pounds while those of mild-cured salmon averaged 5.2 million pounds. Compared with 1954, this represented a decrease of 8 percent in the average monthly holdings of cured herring but an increase of 27 percent in the average holdings of mild-cured salmon stocks. Cold-storaged stocks of cured herring were largest on September 30, when they reached nearly 10.8 million pounds. The peak period for mild-cured salmon during 1955 was also on September 30, when these stocks reached 8.7 million pounds.

# GENERAL REVIEW

## FOREIGN FISHERY TRADE

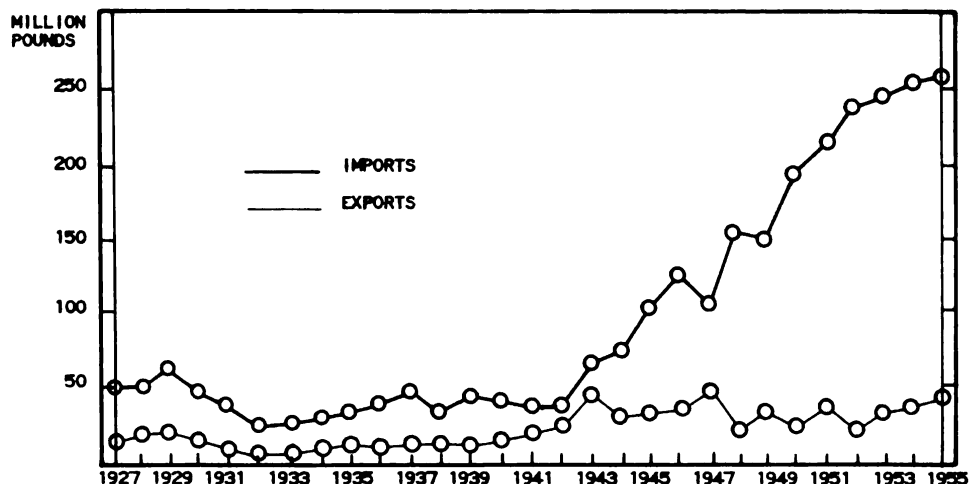

In 1955, the value of United States foreign trade in fishery products amounted to nearly 298.0 million dollars of which almost 258.0 million dollars represented the value of products imported for consumption and approximately 40.0 million dollars the value of exports of domestic fishery products. The value of fishery imports entered for consumption in 1955 was 2 percent greater than in the previous year, while the value of exports of domestic fishery products increased 27 percent. The value of the fishery products imports in 1955 established a new record; the former high year being 1954, when the value of these imports amounted to nearly 252.3 million dollars.

In 1955, imports for consumption amounted to 771.0 million pounds of edible fishery products valued at nearly 208.1 million dollars; and nonedible products valued at 49.9 million dollars. Among the more important items received during 1955 were fresh or frozen groundfish fillets and steaks (including blocks and slabs) and tuna.

Exports of edible fishery products during 1955 totaled almost 110.0 million pounds valued at nearly 25.0 million dollars while exports of nonedible products were valued at 15.1 million dollars. Exports of canned fish and shellfish increased from 49.0 million pounds in 1954 to 89.1 million pounds in 1955. The quantity of fish and marine animal oil (143.0 million pounds) increased 1.2 million pounds during the same period.

### IMPORTS AND EXPORTS OF FISHERY PRODUCTS, 1927 - 1955

## SECTION 2 - NEW ENGLAND FISHERIES

During 1955, the catch of fish and shellfish landed at fishing ports of the New England States (Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut) amounted to 955.4 million pounds valued at 57.2 million dollars ex-vessel. Compared with 1954, the quantity landed declined 11.0 million pounds or 1 percent. However, the total value of the catch remained about the same. The 1955 receipts of haddock (135.0 million pounds) were down 19.9 million pounds or 13 percent compared with the previous year while landings of ocean perch (156.9 million pounds) declined 23.5 million pounds or 13 percent. The catch of sea herring (104.3 million pounds) was 24.9 million pounds or 19 percent less than that of 1954. Increased catches of menhaden, whiting, unclassified fish for industrial use or animal food, and sea scallops prevented a more noticeable overall decrease in poundage. The 1955 catch was taken by 22,566 regular and casual fishermen who operated 847 fishing vessels of five net tons and over and 13,935 boats of less than five net tons each.

The New England fishing industry was confronted with serious economic problems during 1955. The continued heavy imports of groundfish fillets, huge inventories of largely domestic frozen scrod haddock fillets, and labor-management disputes fostered a feeling of anxiety as to the future of the industry. This attitude was intensified by lack of long-term credit for vessel construction, modernization, and maintenance; and mounting vessel insurance rates. Producers and processors appealed to the Federal Government for aid in meeting foreign competition and for assistance in conducting a promotional campaign to reduce the large stocks of frozen scrod haddock fillets. The joint industry-Government sponsored marketing campaign was successful in increasing haddock fillet sales which lowered inventories by approximately 2.0 million pounds more than usual. This not only strengthened the market but showed the value of promotional activities in increasing sales of fishery products.

New consumer products appeared on the market in 1955 and other products were in the process of being developed as the industry searched for solutions to their economic problems. A number of vessels shifted their operations from dragging for edible groundfish and flounders to the more profitable sea scallop fishery or the newly developed fisheries for animal food and reduction. With funds provided by the Saltonstall-Kennedy Act of 1954, the U. S. Fish and Wildlife Service began new projects and expanded other programs to aid the New England industry. Outstanding among these activities were: intensified biological studies of the North Atlantic fishes, a study of vessel insurance problems, the determination of the economic feasibility of freezing fish at sea, and the development of voluntary Federal standards for the inspection and grading of fishery products.

New exploratory-fishing projects were started in the North Atlantic. The trawler *Delaware* completed a number of exploratory cruises in deep waters of the Gulf of Maine. Good catches of large ocean perch and large lobsters were made and a shrimp resource formerly fished was relocated in more northern waters. Research on Maine herring was undertaken with the transfer of the research vessel *T. N. Gill* to Boothbay Harbor, Maine. Bluefin tuna exploration was continued with several good catches despite two hurricanes which disrupted the project.

For many years it was customary for a large fleet of mackerel seiners to leave Gloucester each spring for the Cape May area. However, during the past few years, this fleet has dwindled almost to the vanishing point due to the absence of mackerel from their usual migratory routes. During 1955, only one seiner outfitted for the early spring fishery and this venture proved unprofitable. However, vessels formerly engaged in the mackerel fishery had a successful menhaden seining season with landings of close to 79.8 million pounds, or 34 percent above the 1954 landings and twice the production of 1953.

The 1955 oyster season was the most disastrous the fishery has endured along the New England Coast. The shortage of four- and five-year old oysters in this area was largely due to a heavy wind-storm that swept across Long Island Sound in November 1950, destroying approximately 80 percent of the Connecticut supply of seed oysters and to damage done by the hurricanes of 1954 and 1955 which wreaked havoc in the leased and public oyster grounds of this area. There was some optimism about the future of the industry as a result of a good "set" of seed oysters in waters around Norwalk and Bridgeport, Connecticut during the 1955 spawning season.

# NEW ENGLAND FISHERIES

The Service appreciates the assistance of the following organizations in the collection of the data appearing in this section: the Maine Department of Sea and Shore Fisheries; the New Hampshire Fish and Game Department; the Massachusetts Department of Conservation, Division of Marine Fisheries; the Rhode Island Department of Agriculture and Conservation, Division of Fish and Game; the Connecticut State Board of Fisheries and Game; and the Connecticut State Shell Fish Commission.

The following tables contain summarized and detailed information of the 1955 operating units and catch of the fisheries in the New England States. Condensed summary data on the operating units and catch by states of the New England States, appearing on the following pages, have been previously published in Current Fishery Statistics No. 1480. Additional data on many aspects of the New England fisheries may be found in daily, monthly, and annual reports published by the Market News Service, Commonwealth Pier, Boston, Massachusetts.

# NEW ENGLAND FISHERIES

## LANDINGS AT MAINE PORTS

Landings of fishery products at Maine ports during 1955 amounted to 255.4 million pounds valued at nearly 16.1 million dollars to the fishermen. This production represented a decrease of 28.5 million pounds or 10 percent in volume and 772 thousand dollars or 5 percent in value compared with landings in 1954. Receipts of sea herring (99.4 million pounds) were 24.2 million pounds or 20 percent less than in the previous year; herring, used principally in the canning of Maine sardines, accounted for 39 percent of the total poundage in 1955. Ocean perch landings which amounted to 67.7 million pounds were nearly 12.0 million pounds less than in 1954. Whiting landings (25.1 million pounds) increased during the year with the 1955 production being 15.8 million pounds greater than in the previous year. Although landings of lobsters (22.7 million pounds) accounted for only 9 percent of the total poundage in 1955, these shellfish were the most valuable item taken by Maine fishermen accounting for 54 percent of the total amount received for all species.

Landings at Portland, Maine, totaled 68.2 million pounds valued at 2.3 million dollars during 1955 while landings at Rockland, Maine, amounted to 48.8 million pounds valued at 1.6 million dollars. Imports of fresh sea herring, used for canning, into the Maine and New Hampshire Customs District during 1955 totaled 53 million pounds compared with 28.3 million pounds during the previous year.

The quantities shown in the following tables represent the actual weights of the landings which have not been converted to round weight, therefore, the data are not directly comparable with the catch figures shown in the General Review, regional tables or the Review of Certain Major Fisheries.

In cooperation with the Maine Department of Sea and Shore Fisheries, the Fish and Wildlife Service collects, compiles, and publishes monthly and annual data on the landings of fish and shellfish in Maine. This information is currently published in detail in Maine Landings which is in the Current Fishery Statistics series of reports issued by the Service. In addition to the individual monthly reports, two annual summaries were published in 1955, one listing the catch by months (Current Fishery Statistics No. 1309) and the other listing the catch by gear and by county (Current Fishery Statistics No. 1298).

## LANDINGS AT CERTAIN MASSACHUSETTS PORTS

Because of their importance in the production of fishery products, detailed landings statistics are collected daily and published monthly for Boston, Gloucester, New Bedford, and Cape Cod ports. Landings by fishing craft of all sizes at the ports named are included in the data in the following tables.

The quantities shown in the following tables represent the actual weights of the landings. Items landed drawn, dressed, etc., have not been converted to round weight, therefore, the data are not directly comparable with the catch figures shown in the General Review, regional tables, or the Review of Certain Major Fisheries.

In 1955, landings of fishery products by craft of all sizes at Boston, Gloucester, New Bedford, and Cape Cod amounted to approximately 515.3 million pounds valued at nearly 31.1 million dollars ex-vessel. Although the poundage landed was 23.7 million pounds or 5 percent greater than in 1954, the value of the catch remained nearly the same. Decreases in the landings of several of the major fisheries were primarily due to economic problems in the processing, distribution, and marketing of fishery products rather than to declining stocks on the fishing grounds. The 1955 haddock landings amounted to nearly 114.0 million pounds valued at 7.8 million dollars-- 16.4 million pounds and 1.8 million dollars less than the previous year's production. Receipts of ocean perch (89.3 million pounds valued at 3.5 million dollars) were also down. Compared with 1954, this item declined 12 percent in volume and 17 percent in value. The production of whiting in 1955 amounted to 68.9 million pounds valued at 1.4 million dollars representing an increase of 23 percent in volume but a decrease of 8 percent in value. Sea scallops (15.5 million pounds valued at 8.1 million dollars) were the most valuable species produced during 1955. Four items accounted for 74 percent of the total poundage landed at Massachusetts ports during the year: haddock, 22 percent; fish for reduction and animal food, 22 percent; ocean perch, 17 percent; and whiting, 13 percent.

Receipts at Gloucester accounted for 49 percent of the total poundage landed during the year and 25 percent of the total value; Boston was second both in poundage, 27 percent, and value, 30 percent; New Bedford ranked third in poundage with 16 percent, but first, 39 percent, in value. Cape Cod was in fourth place in both categories with 8 percent in poundage and 6 percent in value.

The fishing fleet operating on the fishing banks of the North Atlantic and landing fares at Boston, Gloucester, New Bedford, and Cape Cod ports during 1955 numbered 704 craft of all sizes. The landings listed in the following tables, however, do not represent the entire catch of these vessels, as some of them also landed fares at other New England ports, at New York City, and at more southerly ports in connection with the shrimp, mackerel, and southern trawl fisheries.

Of the total landings, 36 percent was taken by medium otter trawlers; 27 percent by large otter trawlers; 19 percent by small otter trawlers; 12 percent by purse seines; 3 percent by scallop dredges; and the remaining 3 percent by other types of gear.

The following tables contain a detailed summary of information on the landings of fish and shellfish by fishing craft of all sizes at Boston, Gloucester, New Bedford, and Cape Cod Ports. Information on the annual landings by ports was previously published in Current Fishery Statistics No. 1312, while data on the landings by gear and area appeared in Current Fishery Statistics No. 1340. Detailed monthly information on the landings by port and by gear and area of capture was also published in the Current Fishery Statistics series.

1/2 EXCLUSIVE OF DUPLICATION.  
2/ INCIDENTAL CATCH.

NOTE:--OTTER TRAWLS ARE CLASSIFIED ACCORDING TO THE SIZE OF THE CRAFT. "SMALL" OTTER TRAWL CRAFT ARE THOSE 50 GROSS TONS CAPACITY OR UNDER; "MEDIUM," 51 GROSS TONS TO 150 GROSS TONS; AND "LARGE," 151 GROSS TONS OR GREATER. A SINGLE TRIP IS SHOWN FOR EACH VOYAGE. WHEN A CRAFT OPERATES IN TWO OR MORE SUBAREAS DURING A VOYAGE, A FRACTIONAL PART (IN TENTHS) OF THE TRIP IS ALLOTTED TO THE SUBAREA ON THE BASIS OF THE CATCH TAKEN IN EACH SUBAREA. "OCCASIONAL" AFTER THE NAME OF A SUBAREA INDICATES THAT THE CRAFT CONTRIBUTING TO THE CATCH AS SHOWN FISHED CHIEFLY WITH ANOTHER TYPE OF GEAR. THE WEIGHTS OF FISH GIVEN IN THIS TABLE REPRESENT THE FISH AS LANDED FROM THE VESSELS AND THE VALUES ARE THOSE RECEIVED BY THE FISHERMEN. "LARGE" COD ARE CLASSIFIED AS THOSE WEIGHING OVER 10 POUNDS; "MARKET" COD, 2 1/2 TO 10 POUNDS; AND "SCROD" COD, 1 1/2 TO 2 1/2 POUNDS. "LARGE" HADDOCK ARE THOSE WEIGHING OVER 2 1/2 POUNDS AND "SCROD" HADDOCK, 1 1/2 TO 2 1/2 POUNDS. "LARGE" HAKE ARE THOSE WEIGHING OVER 6 POUNDS, AND "SMALL" HAKE, UNDER 6 POUNDS.

1/ EXCLUSIVE OF DUPLICATION.

NOTE:--THE ROMAN NUMERALS APPEARING IN THE ABOVE TABLE REFER TO THE NUMBERS GIVEN THOSE AREAS BY THE NORTH AMERICAN COUNCIL ON FISHERY INVESTIGATIONS. THE WEIGHTS OF FISH GIVEN IN THIS TABLE REPRESENT THE FISH AS LANDED FROM THE VESSELS AND THE VALUES ARE THOSE RECEIVED BY THE FISHERMEN. "LARGE" COD ARE CLASSIFIED AS THOSE WEIGHING OVER 10 POUNDS; "MARKET" COD, 2 1/2 TO 10 POUNDS; AND "SCROD" COD, 1 1/2 TO 2 1/2 POUNDS. "LARGE" HADDOCK ARE THOSE WEIGHING OVER 2 1/2 POUNDS AND "SCROD" HADDOCK, 1 1/2 TO 2 1/2 POUNDS. "LARGE" HAKE ARE THOSE WEIGHING OVER 6 POUNDS, AND "SMALL" HAKE, UNDER 6 POUNDS.

## SECTION 3 - MIDDLE ATLANTIC FISHERIES

The 1955 catch of fish and shellfish landed in the coastal areas of the Middle Atlantic States (New York, New Jersey, and Delaware) amounted to approximately 871.0 million pounds valued at 28.9 million dollars to the fishermen, a decrease of 15.9 million pounds or 2 percent in volume and 1.6 million dollars or 5 percent in value compared with the previous year. The number of fishermen operating in the Middle Atlantic area increased from 9,569 in 1954 to 10,053 in 1955 and the number of fishing craft of five net tons and over also increased from 637 in 1954 to 670 in 1955.

The Middle Atlantic menhaden fishery had a successful season in 1955 with a total catch of 763.8 million pounds valued at 10.2 million dollars to the fishermen. These landings dominated all other fish and shellfish items in the Middle Atlantic area accounting for 88 percent of the total poundage and 35 percent of the total value. While the 1955 Middle Atlantic menhaden catch was 2 percent less than in the previous year and 11 percent below the record production of 857.6 million pounds taken in 1953, it was greater than the catch of these fish taken in any other area. The decline in production was due to hurricane threats and strong winds which seriously disrupted fishing operations during August.

During the 1955 season, 59 menhaden seiners plied the Middle Atlantic waters. These vessels employed 1,598 fishermen and utilized 177 accessory craft to encircle and trap the compact schools of fish. This fleet accounted for 97 percent of the total 1955 menhaden catch. The remainder was taken in pound nets, gill nets, and otter trawls. Nearly the entire 1955 production was utilized for industrial purposes with only small quantities being used for bait.

Shellfish were the most valuable fishery items taken in the Middle Atlantic States. Although they comprised only a little over 4 percent of the total poundage of fish and shellfish taken in 1955, they accounted for nearly 46 percent of the total value. The hard clam fishery which has decreased noticeably since 1950, made a minor gain in volume of production during 1955. While hard clam receipts of 6.2 million pounds of meats were 4 percent above those of 1954, they were an alarming 54 percent below the 13.6 million pounds produced in 1950. Good catches of surf clams in the Middle Atlantic area did much to maintain the total shellfish production at a high level. From a catch of less than 1.0 million pounds of surf clam meats in 1943, this fishery has grown to occupy a position of major importance in the economy of the Middle Atlantic States, with catches averaging 10.4 million pounds during the years since 1950. The serious plight of the oyster industry became even more apparent as production, continuing its downward trend, plunged to a new low of 9.8 million pounds of meats in 1955. Reflecting the poor growing conditions and shortages of seed throughout most of the Middle Atlantic area, the 1955 production of oysters was 26 percent below that of 1954 and 46 percent below the 18.2 million pounds taken in 1950.

The fish pot fishery in the Middle Atlantic area declined sharply in 1955 as the catch of sea bass, mainstay of this industry, fell to 2.4 million pounds, a decrease of 31 percent compared with that of 1954. Due to successful seasons during the past few years, the number of men employed and the number of pots fished increased during 1955. However, the summer catch was less than in the previous year. August hurricanes discouraged further operations and fishermen began taking up their gear early in September. This action was premature for with almost half of the pots on the beach, a heavy fall run of sea bass developed. As a result, the catch did not reflect the abundance of this species off the Middle Atlantic Coast.

The Middle Atlantic pound-net fishery continued its downward trend in 1955 with a total catch of only 27.9 million pounds. This catch was 17 percent less than in 1954 and 52 percent below the landings of 1953.

The Service appreciates the assistance of the following organizations in the collection of the data appearing in this section: The New York Conservation Department; the Division of Fish and Game and the Board of Shell Fisheries of the New Jersey Department of Conservation and Economic Development; and the University of Delaware Marine Research Laboratory and the Delaware Commission of Shell Fisheries.

# MIDDLE ATLANTIC FISHERIES

Condensed summary data of the operating units and catch by States of the fisheries of the Middle Atlantic area appearing on the following pages have been previously published in Current Fishery Statistics No. 1359. Seasonal variation in the catch of fish and shellfish in the New York Marine Districts and in New Jersey can be ascertained from monthly landings bulletins issued for these States in cooperation with the fishing agency of each State. Additional data on many aspects of the Middle Atlantic fisheries may be found in daily, monthly, and annual reports published by the Market News Service, 155 John Street, New York 38, New York.

## HUDSON RIVER SHAD FISHERY

During 1955, there were 322 fishermen employed in the Hudson River shad fishery. These fishermen marketed more than 1.5 million pounds of shad valued at about 199 thousand dollars. Compared with the previous year's catch, this production was an increase of 261 thousand pounds or 21 percent in volume and almost 34 thousand dollars or 20 percent in value. There were 69 fewer fishermen employed in the Hudson River shad fishery in 1955 than in 1954. The average price per pound received by fishermen in 1955 was 13.1 cents--nearly the same as in 1954.

During 1955, the shad taken in the River averaged 3.83 pounds per fish--slightly more than the average of 3.59 pounds per fish harvested in the Hudson in the previous year.

Statistics on the operating units and catch of shad in the Hudson River for 1955 by New York and New Jersey fishermen are also included in the operating unit and catch data for these States.

# SECTION 4 - CHESAPEAKE FISHERIES

The catch of fish and shellfish in the Chesapeake States (Maryland and Virginia) during 1955 amounted to over 496.2 million pounds with a dockside value of 31.6 million dollars. Compared with 1954 this was a 5 percent increase in volume but a 1 percent decrease in value. This difference was accounted for principally by an increase in the catch of menhaden (up 26.5 million pounds) and croaker (up 5.4 million pounds) which was partially offset by a drop in the catch of blue crabs (down 9.6 million pounds) and oysters (down 2.4 million pounds). A total of 20,195 fishermen operating 795 vessels of five net tons and over, and 12,217 other fishing craft were employed in the commercial fisheries of the Chesapeake area in 1955. Data on the drift and stake gill net fisheries for nets having a length of less than 100 yards each are included for the first time in the fishery statistics of Maryland.

Oysters were the most valuable species landed in the Chesapeake States during 1955 with fishermen receiving about 17.8 million dollars for 39.2 million pounds of oyster meats. Compared with 1954, this was a decrease of 6 percent in both volume and value. Considerable damage was dealt the oyster fisheries by three of the hurricanes which hit the eastern coast of the United States in 1955. Oystermen in the Rappahannock River area of Virginia suffered the greatest damage. There was a steady demand for the small-size or "standard" oysters for the frozen soups and stew trade during the year. Consequently, the price difference between these and the large-size or "selects" was less than in previous years. Menhaden, utilized almost exclusively in producing meal and oil, was the second most important single item of the commercial fisheries, with a dockside value of 3.8 million dollars. The 315.4 million-pound Chesapeake area catch of menhaden was the largest since 1920 when 366.4 million pounds were reported. Blue crabs with a value of 2.8 million dollars to the fishermen were the third most valuable species landed in the Chesapeake area during 1955. Blue crab landings were especially light during the first four months of the year. In this period crab meat producers imported blue crabs from North Carolina. During the following months, landings increased but were still below corresponding periods in 1954. During the last four months of 1955 crab catches were heavy. Because of low production crab prices were very high at the start of the year, but as the year ended, increased landings dropped prices sharply.

One of the Chesapeake's newest fisheries, the soft clam industry, showed signs of considerable expansion. This industry has been confined principally to two Maryland counties during the five years of its existence. Soft clam production during 1955 was about five times greater than in 1954.

A good run of alewives during the 1955 season exceeded the requirements of food processors, who have been finding it increasingly difficult to market their product. The production of canned alewives, as well as salted, pickled, and other cured alewives was less than in 1954 and significantly less than in earlier years.

The 1955 catch of 11.5 million pounds of croaker, and 4.2 million pounds of gray sea trout was the greatest quantity landed since 1949 and 1950, yet was much less than the volume of these two species produced during the 1930's and most of the 1940's.

In the fresh-water area during 1955, the greater production of catfish and carp was the result of the demand for these fish for stocking inland ponds. A fleet of tank trucks was busy most of the year collecting and distributing these fish.

The Service acknowledges and is grateful for the assistance of the following organizations in the collection of the data appearing in this section: Maryland Department of Research and Education, Maryland Department of Tidewater Fisheries, The Virginia Fisheries Laboratory, and the Virginia Commission of Fisheries.

Condensed summary data of the operating units and catch by States of the fisheries of the Chesapeake area appearing on the following pages have been previously published in Current Fishery Statistics No. 1579. Data on the bay and ocean areas of Maryland and Virginia are shown at the end of this section. Additional data on the daily, monthly, and annual production of fishery products in more important areas of these States are available in reports published by the Service's Fishery Market News Service office at Hampton, Virginia.

# CHESAPEAKE FISHERIES

## POTOMAC RIVER SHAD AND ALEWIFE FISHERY

The catch of shad in the Potomac River during 1955 amounted to 288 thousand fish weighing 806 thousand pounds and valued at 137 thousand dollars to the fishermen. The take of alewives in the Potomac for the same year was 22.1 million fish weighing over 9.0 million pounds, valued at 92 thousand dollars.

Compared with 1954, the poundage of shad increased 16 percent and the value 13 percent. The catch of alewives was down 32 percent in volume and 43 percent in value compared with the landings of the previous year. During 1955, there were 402 fishermen employed in this fishery, 97 less than the number fishing in 1954.

Statistics on the yield and operating units of shad and alewives in the Potomac River are also included in the catch and operating unit data for Virginia and Maryland.

## SECTION 5 - SOUTH ATLANTIC FISHERIES

The 1955 production of fish and shellfish in the coastal areas of the South Atlantic States (North Carolina, South Carolina, Georgia, and the East Coast of Florida), and in the inland lakes of Florida totaled 346.6 million pounds with a dock-side value of over 17.3 million dollars. Compared with 1954, this was an increase of 20.5 million pounds but a decrease of 239 thousand dollars. The increase in volume was primarily the result of greater landings of menhaden, while the decrease in value was accounted for by a sharp decline in the amount received for oysters, gray sea trout, and shad due to reduced production of these items. During 1955, as in past years, menhaden was the most important variety in volume landed, while shrimp was the most valuable. The catch of menhaden made up 66 percent of the landings and 16 percent of the value, while the shrimp catch accounted for 8 percent of the total production but 40 percent of the total value. A total of 15,917 fishermen using 1,064 vessels of five net tons and over, and 7,289 other fishing craft of various types was employed in the commercial fisheries of the South Atlantic area in 1955. Various fishery products produced by fishery establishments in the South Atlantic States during the year were valued at 32.4 million dollars at the producers' level, 1.3 million dollars greater than during 1954. Breaded fishery products, principally shrimp, and other packaged fresh and frozen fishery commodities accounted for 77 percent of the total 1955 value of manufactured fishery products produced in the area. The remaining products consisted of fish meal, fish oil and other byproducts, 16 percent; canned fish and shellfish, 6 percent; and salted and smoked fish, 1 percent. The trend of recent years toward increased production of frozen packaged fishery items continued into 1955.

Inclement weather and excessive rainfall adversely affected fishing operations during the fall months of 1955, the period of the year in which the production is the greatest for most varieties of fish. Besides disrupting fishing operations over a large area, three hurricanes which occurred in August and September did material damage to fishing craft and gear as well as shore installations in North Carolina.

The catch of menhaden, used almost exclusively in production of fish meal and oil, amounted to 227.8 million pounds-- 10 percent greater than in the previous year. Other finfish landings totaled 54.1 million pounds. Alewives, mullet, catfish and bullheads, spot, Spanish mackerel, and king whiting accounted for 70 percent of the 59 varieties of other finfish which made up the 1955 catch.

Blue crabs and shrimp accounted for 94 percent of the 1955 South Atlantic shellfish catch of 64.7 million pounds. Blue crabs were in good supply throughout the year and the price to the fishermen for hard shell crabs during the first half of the year was much higher than in past years as a result of a shortage of these shellfish in the Chesapeake Bay area. However, a depressed market for crabs during the fall of 1955 resulted in a significant reduction in fishing effort for a time in some South Atlantic coastal areas. The trend toward the use of a greater number of crab pots in certain sections of the coast continued in 1955 as it had been found that this type of gear was more effective than bait trot lines. The soft shell blue crab fishery declined markedly in 1955. During the season there was little incentive to produce soft shell crabs as the price of hard shell crabs was at a peak level. Shrimp production and value of the catch in the South Atlantic area during 1955 was nearly the same as the previous year.

The Service gratefully acknowledges the assistance of the following organizations in the collection of the data appearing in this section: The Division of Commercial Fisheries, North Carolina Department of Conservation and Development; the Division of Commercial Fisheries, South Carolina Wildlife Resources Department; the Coastal Fisheries Division, Georgia Game and Fish Commission; and the Florida State Board of Conservation and the Marine Laboratory, University of Miami.

## SOUTH ATLANTIC FISHERIES

Condensed summary data of the operating units and fisheries catch of the South Atlantic area appearing on the following pages have been previously published in Current Fishery Statistics No. 1437. Seasonal variation in the catch of fish and shellfish in North Carolina and Florida can be ascertained from the 1955 monthly landings bulletins issued for these two states in cooperation with the fishery agency of each state. Plans to undertake publication of a monthly landings bulletin for the state of Georgia beginning with January 1956 were completed in late 1955. Additional data on many aspects of the South Atlantic fisheries may be found in the daily, monthly, and annual reports published by the Hampton, Virginia, Market News office of the U. S. Fish and Wildlife Service.

## SECTION 6 - GULF FISHERIES

The 1955 catch of fish and shellfish landed at ports in the Gulf States (West Coast of Florida, Alabama, Mississippi, Louisiana, and Texas) amounted to 829.6 million pounds valued at 76.3 million dollars to the fishermen. Compared with the 1954 landings, this catch represented an increase of 10 percent in volume and 5 percent in value. Shrimp (212.4 million pounds valued at 54.5 million dollars) continued to be the most valuable fishery resource in the Gulf States area accounting for 71 percent of the total value. Landings of menhaden (481.0 million pounds valued at 7.3 million dollars) comprised 58 percent of the total poundage. The 1955 catch was taken by 22,731 fishermen operating 11,628 fishing craft of all types and sizes. During the previous year, 22,821 fishermen operating 12,324 craft were engaged in the taking of fishery products in this area.

The catch of shrimp, amounting to 212.4 million pounds, was 10 percent less than in the previous year. This decline was largely due to several tropical storms during late July and August and other periods of inclement weather during the year. Despite the decline in the volume of the shrimp production, the value of the catch was almost 2 percent greater than in 1954. The increase in value was due to generally higher average prices, with the small sizes making the greatest gain.

During the past 25 years, the catch of shrimp, although fluctuating yearly, has increased at an average rate of about 5 percent a year and the fishery has developed into the most valuable in the United States. The increased catch resulted from exploitation of new fishing grounds and the utilization of additional species of shrimp. However, biological research which would provide sufficient knowledge to scientifically manage this industry and maintain production at the highest possible level has lagged far behind. To remedy this, funds were made available during 1955 for an expanded shrimp biological research program in the Gulf. As most basic research requires detailed catch statistics, funds were also made available for the collection of detailed shrimp operating unit and catch statistics. The latter program will help to provide the basic data needed to obtain the greatest yield of shrimp consistent with maintaining the stocks.

By late 1954 and early 1955, it became apparent that the Gulf Coast boom in vessel construction, mostly shrimp trawlers, that had developed during the past few years, was declining as fishermen struggled to pay for the expanded fleet. Total new registrations of fishing vessels of 5 net tons and over for the Gulf Coast were 103 in 1955 compared with 313 in the previous year; 25 percent and 44 percent of the total new and converted vessels throughout the United States in 1955 and 1954 respectively.

Explorations conducted by the U. S. Fish and Wildlife Service vessel *Oregon* (based at Pascagoula, Mississippi) produced additional valuable information on the distribution and seasonal availability of various species of tuna in the Gulf of Mexico and adjacent waters of the Caribbean Sea. Technical assistance and advice were furnished to a number of commercial fishermen who converted their vessels to enter this new fishery, first discovered by the *Oregon* in 1954.

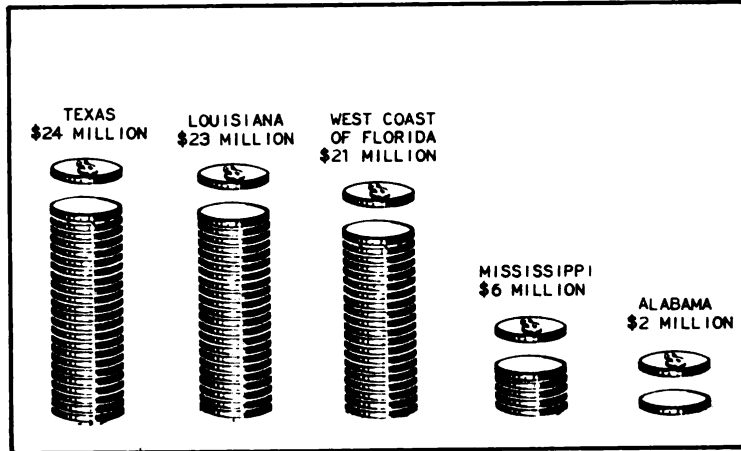

Data covering sales of sponges at the Tarpon Springs Sponge Exchange which were published in this section prior to 1951, have been omitted because of a decline in the importance of this fishery. Information on the catch and value of the sponge fishery in the Gulf for 1955 is listed in the catch tables of this section.

Condensed summary data on operating units and catch by states of the Gulf Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics 1540. Data on the catch and operating units of the East Coast of Florida and of the entire state of Florida may be found in Section 5 of this Digest. Seasonal variation in the catch of fish and shellfish in Florida, Alabama, Mississippi, and Texas can be ascertained from monthly landings bulletins issued currently for these states in cooperation with each State's fishery agency. Additional data on many aspects of the Gulf fisheries may be found in daily, monthly, and annual reports published by the New Orleans, Louisiana Market News Office of the U. S. Fish and Wildlife Service.

The Service acknowledges the assistance of the following organizations in the collection of the data appearing in this section: The Florida State Board of Conservation and the Marine Laboratory, University of Miami; the Alabama Department of Conservation, Game and Fish Division; the Mississippi Seafood Commission; the Louisiana Wild Life and Fisheries Commission; and the Texas Game and Fish Commission.

## CATCH OF FISHERY PRODUCTS IN GULF STATES, 1955

## SECTION 7 - PACIFIC COAST STATES FISHERIES

During 1955, the production of fish and shellfish from waters off the Pacific Coast States (Washington, Oregon, and California) amounted to 800.1 million pounds valued at nearly 79.8 million dollars to the fishermen. Compared with 1954, this represented a decrease of 25.8 million pounds or 3 percent in quantity and 16.6 million dollars or 17 percent in value. California (598.1 million pounds) accounted for 75 percent of the total 1955 Pacific Coast States catch followed by Washington (155.3 million pounds) with 19 percent and Oregon (46.7 million pounds) with the remaining 6 percent.

The Pacific Coast States salmon catch of 1955, while 11 percent greater than that of the previous year and relatively better than the 1955 Alaska production, was still disappointing and below expectations, due mainly to the short supply of chum salmon. In 1954 chums had been abundant everywhere but in 1955 they were scarce in all areas. Sockeyes, at the low point of the four-year cycle, were not expected to yield heavily. This necessitated operations in the Puget Sound area to be concentrated on pink salmon in 1955 and production was fairly good. Columbia River salmon operations in 1955 were highly encouraging as far as the spring and early summer runs of king salmon were concerned, but discouraging with respect to fall kings which, prior to 1950, composed the majority of the Columbia River salmon catch. While the cause of this failure was not known, vigorous efforts were contemplated by the states of Oregon and Washington in an effort to restore the Columbia River fall king salmon run, not only because of its extreme importance in the biological structure of that stream but also due to its importance in the economy of the ocean-troll line fishery and the gill net fishery of the Columbia itself.

The Pacific Coast States salmon fishery in 1955 was not without other complications and one of the most serious was a threatened deficiency in escapement in some areas. The situation was further aggravated by near-disastrous floods in November in the lower tributaries of the Fraser River and poor escapement of certain races of salmon caused by the block which occurred in the Fraser River during the migration period. Competitive pressure in the Puget Sound area between the fishing fleets of the United States and Canada reached a new peak in 1955 as the fleets moved their operations to the open sea disturbing the pattern of production to which the administrative controls of the International Pacific Salmon Fisheries Commission had been tailored. The industry was further alarmed by an increased display of interest by water power groups in the Fraser River's hydro-electric potential.

The 1955 Pacific Coast domestic tuna catch fell to 269.5 million pounds--about 54.0 million pounds less than landed in 1954 and 121.0 million pounds below the record 390.5 million pounds taken in 1950. The controlling factor in this decrease was of an economic rather than of a biological nature as the reduced landings in 1955 were primarily caused by the phenomenal rise in frozen tuna imports, record-high inventories, a cannery workers-management dispute, lengthy ex-vessel price disputes, and unprecedented lay-overs between trips. The 1955 catch of Pacific tuna and tunalike fishes was the lowest since 1947.

The 1955 catch of Pacific sardines amounted to nearly 146.0 million pounds. Compared with 1954, this was an increase of 9.1 million pounds. While there were encouraging signs of sardines in Southern California waters just prior to the opening of the season on October 1, labor disputes and price controversies kept the fleet in port until November 7. When the fleet finally put to sea, the seiners were placed on small nightly catch limits. These factors were primarily responsible for preventing a greater production.

During 1955, receipts of jack mackerel at California ports amounted to 35.8 million pounds--more than twice the production of the previous year. Landings of Pacific mackerel totaled 23.3 million pounds representing a decrease of 2.1 million pounds. Through most of the 1955 season there were an abundance of both species available in Southern California waters but the fleet's fishing effort was restricted by small catch limits.

The Service appreciates the assistance of the following organizations in the collection of the data appearing in this section: The Washington Department of Fisheries; the Oregon Fish Commission; and the California Department of Fish and Game.

# PACIFIC COAST STATES FISHERIES

Condensed summary data on the operating units and catch by States of the Pacific Coast States Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics, No. 1580. Additional data on many aspects of the Pacific Coast fisheries may be found in daily, monthly, and annual reports published by the Market News Service in San Pedro, California and Seattle, Washington. Specific data on several of the major fisheries of the Pacific Coast States may be found in Section 12 of this publication.

<sup>1/</sup> INCLUDES THE CATCH TAKEN OFF LATIN AMERICA.

<sup>2/</sup> LESS THAN 500 POUNDS OR 500 DOLLARS.

<sup>3/</sup> IN THE CALIFORNIA CATCH, GRAYFISH ARE INCLUDED WITH SHARKS.

NOTE: --DATA ON THE VOLUME OF FISH LANDED IN CALIFORNIA ARE SHOWN IN WEIGHTS AS LANDED. STATISTICS FOR WASHINGTON AND OREGON ARE SHOWN IN ROUND WEIGHT.

THE CATCH SHOWN FOR WASHINGTON AND OREGON INCLUDES 413,678 POUNDS OF FISH LIVERS AND VISCERA VALUED AT \$46,399 TO THE FISHERMEN. THE CATCH WAS COMPRISED OF THE FOLLOWING: GRAYFISH LIVERS, 87,986 POUNDS VALUED AT \$5,015; HALIBUT LIVERS, 136,999 POUNDS VALUED AT \$22,870; LINGCOD LIVERS, 7,144 POUNDS VALUED AT \$2,003; RATFISH LIVERS, 24,745 POUNDS VALUED AT \$1,237; SABLEFISH LIVERS, 42,073 POUNDS VALUED AT \$4,704; SOUFFIN SHARK LIVERS, 1,229 POUNDS VALUED AT \$571; OTHER SHARK LIVERS, 90 POUNDS VALUED AT \$4; AND HALIBUT AND SABLEFISH VISCERA, 113,412 POUNDS VALUED AT \$9,995. THE CATCH OF GRAYFISH AND SHARKS WAS CALCULATED FROM THE LANDINGS OF LIVERS ON THE BASIS THAT THEY REPRESENTED 12 PERCENT OF THE TOTAL WEIGHT OF THESE FISH. MOST OF THE CARCASSES WERE DISCARDED AT SEA AFTER REMOVAL OF THE LIVERS.

A PORTION OF THE TUNA CATCH TAKEN OFF LATIN AMERICA BY UNITED STATES FISHERMEN WHICH IS INCLUDED IN THIS TABLE MAY ALSO BE INCLUDED IN UNITED STATES IMPORT STATISTICS.

- 1/ THE SALMON CAUGHT BY HAUL SEINES WERE TAKEN ON INDIAN RESERVATIONS.
  - 2/ FISHED ONLY ON INDIAN RESERVATIONS.
  - 3/ THE POUNDAGE SHOWN INCLUDES THE TOTAL VOLUME OF GRAYFISH AND SHARKS CAUGHT. MANY OF THE CARCASSES WERE DISCARDED AT SEA.
  - 4/ BASED ON AN AVERAGE OF 22 POUNDS PER DOZEN.
  - 5/ BASED ON A YIELD OF 25 PERCENT MEATS.
  - 6/ BASED ON A YIELD OF 10 PERCENT MEATS FOR PACIFIC OYSTERS AND 18 PERCENT MEATS FOR WESTERN OR NATIVE OYSTERS.
  - 7/ BASED ON A YIELD OF 17 PERCENT MEATS.
- NOTE:--THE POUNDAGE AND VALUE OF THE CATCH SHOWN ABOVE INCLUDES THE FOLLOWING ITEMS: GRAYFISH LIVERS, 87,986 POUNDS, VALUE \$5,015; HALIBUT LIVERS, 134,599 POUNDS, VALUE \$21,670; LINGCOD LIVERS, 5,944 POUNDS, VALUE \$1,403; RATFISH LIVERS, 24,745 POUNDS, VALUE \$1,237; SABLEFISH LIVERS, 41,543 POUNDS, VALUE \$4,545; SOUPFIN SHARK LIVERS, 1,229 POUNDS, VALUE \$571; AND OTHER SHARK LIVERS, 90 POUNDS, VALUE \$4. ALSO INCLUDED WERE 113,412 POUNDS OF HALIBUT AND SABLEFISH VISCERA VALUED AT \$9,995.

# PACIFIC COAST STATES FISHERIES

## LANDINGS BY HALIBUT FLEET AT SEATTLE, WASHINGTON

During 1955, landings of halibut, lingcod, rockfishes, and shellfish at Seattle, Washington, by the United States halibut fleet amounted to 16.2 million pounds valued at approximately 2.6 million dollars to the fishermen. In addition, a total of 270 thousand pounds of assorted fish livers and viscera, valued at more than 31 thousand dollars was landed by these vessels. Compared with 1954, the combined landings represented a decrease of 16 percent in volume and 34 percent in value.

A summary of the 1955 landings at Seattle by the United States halibut fleet is contained in the following tables. These landings represent the dressed weight of the catch and are not directly comparable with the data contained in the sectional and State catch tables. For additional information on the Pacific Coast halibut fishery, the reader is referred to Section 12 of this publication, Review of Certain Major Fisheries.

NOTE:--IN ADDITION, VESSELS OF THE SEATTLE HALIBUT FLEET LANDED THE FOLLOWING QUANTITIES OF FISH LIVERS AND VISCERA: HALIBUT AND VISCERA, 207,700 POUNDS VALUED AT \$24,050; LINGCOD LIVERS, 21,600 POUNDS, VALUED AT \$3,240; ROCKFISH LIVERS, 10,200 POUNDS, VALUED AT \$1,000; SABLEFISH LIVERS, 30,100 POUNDS VALUED AT \$3,010. THE 1955 PACIFIC HALIBUT FISHING SEASON OPENED MAY 12 IN AREAS 1A, 1B, 2, 3A, AND 3B. AREAS 1B AND 2 CLOSED TO REGULAR HALIBUT FISHING ON JUNE 5 AFTER 24 DAYS OF FISHING, COMPARED WITH 21 DAYS OF FISHING IN 1954. AREAS 3A AND 3B CLOSED TO REGULAR HALIBUT FISHING ON AUGUST 4, AFTER 84 DAYS OF FISHING, COMPARED WITH 58 DAYS IN 1954. THE SECOND HALIBUT FISHING SEASON IN AREAS 2, 3A, AND 3B, COMMENCED ON AUGUST 14 AND TERMINATED AFTER 7 DAYS OF FISHING IN AREA 2 ON AUGUST 21, AND AFTER 9 DAYS OF FISHING IN AREAS 3A AND 3B ON AUGUST 23. THE THIRD HALIBUT FISHING SEASON IN AREA 3B BEGAN ON AUGUST 29 AND ENDED ON SEPTEMBER 21 AFTER 23 DAYS OF FISHING. HALIBUT FISHING IN AREA 1A ALSO TERMINATED ON SEPTEMBER 21.

## SECTION 8 - LAKE FISHERIES

The United States and Canadian catch of fishery products in the Great Lakes and international border lakes during 1955 amounted to 118.7 million pounds. United States fishermen accounted for 76.7 million pounds while the Canadian catch amounted to nearly 42.0 million pounds. Compared with the landings of the previous year, the 1955 United States catch from Great Lakes waters represented a decrease of 4.4 million pounds or 5 percent in volume and 281 thousand dollars or 3 percent in value. The lower 1955 Great Lakes catch was mainly due to less herring from Lakes Michigan and Superior and a decrease in the production of Lake Erie yellow perch. Michigan led all other States with a catch of 25.4 million pounds followed by Ohio with 20.4 million pounds and Wisconsin (20.2 million pounds). Lake Erie was the leading producer, with United States fishermen taking 26.8 million pounds and Canadian fishermen 30.3 million pounds. Lake Michigan was second in production with over 30.0 million pounds, the entire amount being taken by United States fishermen.

There were 3,888 United States fishermen employed on all types of craft in the Great Lakes fisheries during 1955 compared with 4,452 in the preceding year. Fewer small craft of less than five net tons fished in 1955 than in 1954, with 1,561 operating in 1955 and 1,746 in the previous year. The number of vessels of five net tons and over fishing during 1955 amounted to 596 compared with 654 in 1954.

Production from all of the Great Lakes was generally lower than in the previous year although Lake Michigan's 1955 catch about equalled that of 1954. During 1955, the Great Lakes produced less lake herring, lake trout, smelt, suckers, white bass, whitefish, and yellow pike while the catches of blue pike, yellow pike, chubs, and catfish increased. The 1955 lake trout yield continued to follow the downward trend that has been apparent for the past several years. Trout catches in Lakes Michigan and Huron were almost nonexistent in 1955. The domestic fishery for this species is now centered entirely in Lake Superior with almost 66 percent of the total catch of this item being landed in the State of Michigan. The Great Lakes whitefish catch amounted to only 1.9 million pounds in 1955-- a decrease of 19 percent compared with 1954. While whitefish production held up quite well in Lakes Superior and Erie, the 1955 Lake Michigan catch was 52 percent less than that taken in 1954 and was primarily responsible for the lower 1955 whitefish production.

During 1955, the Convention on Great Lakes Fisheries, which was signed the previous year by the United States and Canada, entered into force. Under it will be established the Great Lakes Fishery Commission composed of six Commissioners, three from each Government. The Commission will seek the preservation and improvement of the Lakes Fisheries through dual activities in the fields of fishery research and sea-lamprey control. The sea lamprey has proved to be a scourge to the trout and whitefish in Lakes Huron and Michigan. Lake Superior fisheries were also under serious attack in 1955. It has been estimated that the sea lamprey is costing Great Lakes fishermen more than 5.0 million dollars a year in lake trout alone. The Commission has wide powers in the field control of the lamprey and it is expected that it will make extensive use of chemical compounds and electrical barriers across spawning streams to prevent the lampreys from going upstream to spawn.

Much of the data in this section were assembled and prepared for publication by the Service's Branches of Fishery Biology and Commercial Fisheries from information collected by the following agencies: Dominion Bureau of Statistics of Canada; Illinois Department of Conservation; Indiana Department of Conservation, Division of Fish and Game; Michigan Department of Conservation; Minnesota Department of Conservation; New York Conservation Department, Division of Fish and Game; Ohio Department of Natural Resources, Fish Management Section; Pennsylvania Fish Commission; and Wisconsin Conservation Department.

Condensed summary data of the operating units and catch by States of the Great Lakes Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics, No. 1515. Seasonal variations in the catch of fishery products landed in Ohio can be ascertained from monthly landings bulletins issued currently in cooperation with the Ohio Department of Natural Resources, Fish Management Section. Additional specific data on many aspects of the Great Lakes Fisheries may be found in the daily, monthly, and annual reports published by the Service's Chicago Market News Office.

# SECTION 9 - MISSISSIPPI RIVER FISHERIES

During 1955, the catch of fishery products from waters in the extensive Mississippi River drainage area totaled 103.2 million pounds valued at 8.2 million dollars. Compared with 1954, this was an increase of 14 percent in volume and 4 percent in value. During 1955 there were 13,375 fishermen gainfully employed in these fisheries compared with 13,599 during the previous year. Of the total amount landed in this 17-State area, Alabama (15.9 million pounds) and Tennessee (15.1 million pounds) led all other States in volume landed, each accounting for approximately 15 percent of the total catch. Minnesota was in third place followed by Wisconsin, Arkansas, Illinois, Louisiana, and Kentucky. Mussel shells for the button and novelty manufacturing industries led all other items in poundage produced in this area, accounting for 31 percent of the total catch. Carp comprised 25 percent of the total while buffalofish made up 17 percent and catfish and bullheads accounted for 13 percent.

Rough fish (including carp, buffalofish, bullheads, garfish, and quillback) taken as a result of lake and stream management programs and the fishermen and gear employed in taking these fish, have been included in the catch data appearing in this section. Although in many cases these fish were not taken by commercial fishermen, they were marketed through commercial channels. In some States, rough fish comprised a majority of the catch.

The Service acknowledges and is grateful for the assistance of the following organizations in the collection of the data appearing in this section: Alabama Division of Game and Fish; Arkansas Game and Fish Commission; Illinois Department of Conservation; Indiana Department of Conservation; Iowa State Conservation Commission; Kansas Forestry, Fish and Game Commission; Kentucky Department of Fish and Wildlife Resources; Louisiana Wild Life and Fisheries Commission; Minnesota Department of Conservation; Mississippi Game and Fish Commission; Missouri Conservation Commission; Nebraska Game, Forestation, and Parks Commission; Oklahoma Game and Fish Department; South Dakota Department of Game, Fish, and Parks; Tennessee Game and Fish Commission; Texas Game and Fish Commission; Wisconsin Conservation Department; and the Tennessee Valley Authority, Fish and Game Branch.

Condensed summary data of the operating units and catch by States of the Mississippi River Fisheries, appearing on the following pages, have been previously published in Current Fishery Statistics No. 1541.

CATFISH

# SECTION 10 - ALASKA FISHERIES

The commercial catch of fishery products in Alaska during 1955 amounted to 315.3 million pounds valued at 26.8 million dollars to the fishermen. This represented a decrease of 22.3 million pounds or 7 percent in volume and 4.5 million dollars or 14 percent in value compared with 1954. The catches of chinook, red, silver, and chum salmon were smaller than in 1954, while the catch of pinks was slightly higher. There was a sharp increase in the herring catch, and an abrupt drop in halibut landings. Shellfish landings increased in 1955, chiefly as a result of greater catches of Dungeness crabs.

The Territory's fishing industry provided employment for 24,619 persons in 1955 compared with 23,079 in 1954. The number of wholesale and manufacturing establishments decreased from 186 in 1954 to 179 in 1955, while the value of products prepared for market decreased nearly 8.2 million dollars. There was a decline in production in all three regions of the Territory, but it was most pronounced in Southeastern Alaska as a consequence of the drop in the catch of chum salmon from the abnormally high take in 1954. The salmon resource accounted for 71 percent of the quantity and 87 percent of the value of all Alaska fishery products in 1955. Halibut was in second place, both in quantity and value. Herring ranked third in quantity, but was exceeded in value by crab products which have grown in importance in recent years.

Still retreating from the tremendous salmon packs of the 1930's, Alaska's 1955 canned salmon pack of 2.4 million cases was the smallest in the Territory since 1909 representing only 28 percent of the 1936 record pack of nearly 8.5 million cases. Compared with the previous year, the 1955 pack was down 23 percent in volume and 10 percent in value. The most disappointing feature of the 1955 Alaska salmon season was the heavy decline in the chum salmon runs throughout the Territory. The 1955 chum salmon pack was only 36 percent as large as that of the previous year. The pink salmon catch, while small by comparison with the long-term average, was somewhat larger than in 1954. The heaviest producer of canned salmon in Alaska in 1955 was the Kodiak area with a pack of over 600 thousand cases--slightly above the 566 thousand cases packed in 1954. Pink salmon dominated this production and the pack would have been greater had not the area been closed for escapement purposes. It was generally thought that the drastic measures instituted by the U. S. Fish and Wildlife Service in order to restore the Alaska commercial fishing industry contributed to the poor salmon catch in 1955. However, most of the industry agreed that the controls which took the form of area closures, limited fishing hours, and gear reduction were necessary in the Service's goal of rebuilding the Alaska salmon industry.

During 1955, the exploratory vessel *John N. Cobb* completed a survey of potential summer fishing grounds in the Prince William Sound region. Commercially-important discoveries of Pacific ocean perch, sablefish, shrimp, and king crabs were made. Research studies concerning pink salmon in Southeastern Alaska and red salmon in the Cook Inlet and Kodiak areas were continued during 1955 and racial studies of salmon taken on the high seas were enlarged with the aim of segregating salmon stocks of Asian and American origin. Investigations of lesser scope included red salmon in Bristol Bay, king crabs in Bering Sea, and herring.

Statistics on the fisheries of Alaska were collected and compiled by the Branch of Alaska Fisheries of the Service. The information contained in the following tables has previously been published in Current Fishery Statistics No. 1313. Detailed information regarding the Alaska fisheries for 1955. may be found in Statistical Digest No. 40 entitled Alaska Fishery and Fur-Seal Industries, 1955.

NOTE:--THE SALMON CATCH IS REPORTED IN NUMBERS OF FISH; ESTIMATED ROUND WEIGHTS ARE SHOWN IN THE CATCH TABLES.

## ALASKA SALMON CATCH, 1938 - 1955

# SECTION 11 - HAWAIIAN FISHERIES

380

The following tabulations of the catch of fish and shellfish in the Territory of Hawaii have been compiled from monthly reports submitted by the Board of Commissioners of Agriculture and Forestry of the Territory of Hawaii, Division of Fish and Game. The catch listed has not been included in the tabulations of the catch of the United States and Alaska listed in the General Review or Review of Certain Major Fisheries.

# REVIEW OF CERTAIN MAJOR FISHERIES

There are presented in this section of the Digest, complete data on the catch of certain of the major species of fish and shellfish taken on a commercial scale in the United States and Alaska. Although these data are included in the detailed catch tables of the various states, they have been repeated in individual fishery tables in this portion of the report to provide readers with a single source of catch data for cod, haddock, halibut, Pacific mackerel, jack mackerel, menhaden, Atlantic ocean perch, Pacific sardines, salmon, tuna, oysters, clams, crabs, and shrimp. Most of the above species are taken by fishermen operating in several states or districts, and a number are taken by several types of fishing gear. Because of this, the casual reader of the Digest often experiences difficulty in locating complete data on the catch of the species in individual state catch tables. The information contained in this section includes the volume and value of the catch by individual types of gear and by states and districts.

## UNITED STATES AND ALASKA COD FISHERY

During 1955, United States and Alaska fishermen caught 48.7 million pounds of cod valued at 2.7 million dollars. This was a decrease of 4.8 million pounds or 9 percent in volume and 181 thousand dollars or 6 percent in value compared with the previous year's landings. With the exception of the low 1953 cod catch, the 1955 production was the smallest for any year for which records are available.

Otter trawls accounted for 86 percent of the cod catch; lines of all types, 10 percent; and gill nets, 3 percent. Other types of gear accounted for the remaining 1 percent.

Massachusetts, with a catch of 28.5 million pounds, continued to lead in the production of cod, followed by Washington (12.6 million pounds); Maine (2.9 million pounds); and New York (2.3 million pounds).

There was a catch of 119 thousand pounds of cod landed in Alaska during 1955. The last previous year that cod were produced in the Territory was 1950. For many years Alaska supported an important cod fishery. At the height of the fishery during the years from 1914 to 1920, the catch averaged over 40.0 million pounds annually.

COD

# REVIEW OF CERTAIN MAJOR FISHERIES

## ATLANTIC COAST HADDOCK FISHERY

The 1955 catch of haddock landed at East Coast ports of the United States amounted to approximately 135.0 million pounds valued at 8.1 million dollars. This represented a decrease of 19.9 million pounds or 13 percent in volume and 1.9 million dollars or 19 percent in value. Labor-management disputes, adverse weather conditions, large imports of groundfish fillets, and heavy inventories of frozen haddock fillets discouraged production.

Otter trawls accounted for 98 percent of the total production while lines of all types, gill nets, and dredges accounted for the remaining 2 percent.

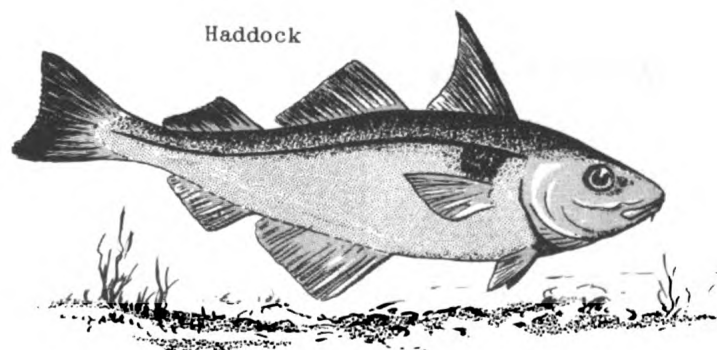

Fishermen landing their fish at Massachusetts ports accounted for 96 percent of the total catch. The remainder was taken in Maine, Rhode Island, Connecticut, New York, New Jersey, and Virginia.

# REVIEW OF CERTAIN MAJOR FISHERIES

388

## PACIFIC COAST HALIBUT FISHERY

The 1955 North Pacific halibut catch by United States and Canadian craft which landed at Washington, Oregon, Alaska, and British Columbia ports totaled approximately 58.9 million pounds (dressed weight) valued at nearly 8.0 million dollars. This production was 12.1 million pounds or 17 percent in volume and almost 4 0 million dollars or 33 percent in value less than the record catch of 1954. This decrease was due primarily to severe weather conditions over the North Pacific fishing grounds.

The 1955 Pacific halibut season opened on May 12 in areas 1A, 1B, 2, 3A and 3B. Areas 1B and 2 closed on June 5 after 24 days of fishing compared with 21 days in 1954. Areas 3A and 3B closed on August 4 after 84 days compared with 58 days of fishing in 1954. The second halibut fishing season in areas 2, 3A, and 3B commenced on August 14 and closed after 7 days in area 2 and after 9 days in areas 3A and 3B. The third halibut fishing season opened in area 3B on August 29 and ended September 21 after 23 days of fishing. Halibut fishing operations were also terminated in area 1A on September 21.

Data on the landings of halibut in the following tables represent the dressed weight of the fish--the weight on which the quota is based--while in other tables in this report halibut is shown on a round weight basis. In the sectional tables, halibut landed in Canada by vessels of United States registry is credited to Alaska. Dressed weight of halibut appearing in this section can be converted to round weight by multiplying by 1.33.

TOTAL . . . . .	17,028	2,790	22,604	3,013	19,229	2,181	58,861	7,984

NOTE:--THE ABOVE TABLE DOES NOT INCLUDE LANDINGS IN CALIFORNIA WHICH TOTALED APPROXIMATELY 227,000 POUNDS. STATISTICS IN THE ABOVE TABLES ARE COMPILED FROM DATA COLLECTED BY THE INTERNATIONAL PACIFIC HALIBUT COMMISSION FOR WASHINGTON, OREGON, AND BRITISH COLUMBIA, AND BY THE FISH AND WILDLIFE SERVICE FOR ALASKA.

## ATLANTIC OCEAN PERCH FISHERY

The catch of Atlantic ocean perch in 1955 totaled approximately 157.0 million pounds valued at more than 6.0 million dollars to New England fishermen. This represented a decrease of 24.5 million pounds or 13 percent in volume and 1.3 million dollars or 18 percent in value compared with the previous year's catch. Deliveries of this item at Massachusetts ports (principally Gloucester) accounted for 57 percent of the total catch compared with 56 percent in 1954, 61 percent in 1953, 68 percent in 1952, and 71 percent in 1951. Maine ports (principally Portland and Rockland) accounted for 43 percent compared with 44 percent in 1954, 39 percent in 1953, 32 percent in 1952, and 29 percent in 1951.

Practically the entire catch of ocean perch was taken by otter trawls, and was used in the manufacture of fillets, most of which were frozen. Waste from filleting was used in the manufacture of meal and oil, and as lobster bait. The catch was made on banks off New England and Nova Scotia, in the Gulf of St. Lawrence, and on the Grand Banks of Newfoundland. In recent years there has been a sharp increase in the catch taken in the Gulf of St. Lawrence and off Newfoundland..

ATLANTIC OCEAN PERCH

# REVIEW OF CERTAIN MAJOR FISHERIES

## PACIFIC COAST SALMON FISHERY

The 1955 Pacific salmon catch on the coasts of the United States and Alaska continued to indicate that these anadromous fishes are declining at an alarming rate. The total production in 1955 amounted to only 289.9 million pounds representing a decrease of 34.8 million pounds or 11 percent compared with the preceding year. Chum salmon was scarce in all areas of the Northwest Pacific and landings of this species were 57 percent below 1954. Compared with the previous year, the 1955 sockeye catch suffered a 37 percent decrease caused primarily by a poor Bristol Bay (Alaska) run and the expected low point of the four-year cycle of this item in the Puget Sound District of Washington. The 1955 catch of pink salmon taken in Puget Sound waters amounted to 31.4 million pounds, slightly less than the two preceding cycle years of 1953 and 1951. This species appears only biennially in odd-numbered years.

Purse seines were the most important gear used in taking salmon in 1955 accounting for 38 percent of the total catch. Gill nets were in second place with 27 percent; followed by pound nets, 14 percent; lines of all types, 11 percent. The remaining 10 percent was taken by haul seines, wheels, reef nets, and dip nets.

## PACIFIC SARDINE FISHERY

During 1955, the catch of Pacific sardines amounted to nearly 146.0 million pounds valued at close to 3.1 million dollars to the fishermen. This production was 9.1 million pounds greater than that of the previous year and 136.1 million pounds greater than the 9.5 million-pound production of 1953 which was the lowest year since 1915 when the fishery was in the early stages of its development. Although there were encouraging signs of sardines in Southern California waters just prior to the opening of the season on October 1, a cannery workers-management dispute and ex-vessel price controversies kept the fleet in port until November 7. When the fleet finally put to sea, the seiners were placed on nightly catch limits as low as 25 percent of their carrying capacity. These factors were primarily responsible for preventing a greater production.

During the year, no sardines were taken in the San Francisco District, where in 1936, nearly 800.0 million pounds were taken. The 1955 sardine fishery was confined almost entirely to Southern California waters.

# REVIEW OF CERTAIN MAJOR FISHERIES

## PACIFIC COAST MACKEREL FISHERIES

During 1955, receipts of jack mackerel at California ports amounted to 35.8 million pounds valued at 712 thousand dollars which represented a gain of 18.4 million pounds--more than twice the production during the previous year. Landings of Pacific mackerel totaled 23.3 million pounds valued at 532 thousand dollars representing a decrease of 2.1 million pounds. Throughout most of the 1955 season, there was an abundance of both species in Southern California waters. However, the fishing effort of the fleet was restricted by small catch limits.

The entire 1955 Pacific Coast mackerel catch was landed in California with 72 percent of the jack mackerel and 95 percent of the Pacific mackerel receipts being received in the San Pedro district.

In 1955, purse seines and lampara nets accounted for 87 percent of the jack mackerel production and 83 percent of the Pacific mackerel catch. Other miscellaneous types of gear used were gill and and trammel nets, lines, brail or scoop nets, dip nets, and otter trawls.

# REVIEW OF CERTAIN MAJOR FISHERIES

## PACIFIC COAST TUNA FISHERY

The 1955 Pacific Coast domestic tuna fishery, burdened with major problems during nearly the entire year, suffered severe setbacks as the catch of tuna and tunalike fishes fell to 269.5 million pounds--about 54.0 million pounds less than was landed in 1954 and 121.0 million pounds less than the record 390.5 million pounds taken in 1950. The reduced landings in 1955 were primarily caused by the phenomenal rise in frozen tuna imports, marketing problems resulting in record high inventories, a cannery workers-management dispute, lengthy ex-vessel price disputes, and unprecedented lay-overs between trips. The 1955 catch of Pacific tuna and tunalike fishes was the lowest since 1947.

Yellowfin (123.2 million pounds) was the most important species taken on a poundage basis, accounting for 46 percent of the total landings. Skipjack (102.8 million pounds) accounted for a majority of the remaining poundage with 38 percent, followed by albacore (11 percent), and bluefin (5 percent). The catch of bonito was less than one-half of 1 percent of the total.

# REVIEW OF CERTAIN MAJOR FISHERIES

## ATLANTIC AND GULF COAST MENHADEN FISHERY

During 1955, menhaden continued to be taken in abundance off the Atlantic and Gulf Coasts with receipts soaring to a new record of nearly 1.9 billion pounds valued at more than 25.0 million dollars to the fishermen. Compared with the former record established in 1954, these landings represented an increase of 130.0 million pounds or 7 percent in volume and 1.5 million dollars or 7 percent in value. Nearly the entire 1955 menhaden production was utilized for industrial purposes with only small quantities being used for bait.

Purse seines accounted for 98 percent of the 1955 menhaden catch, while pound nets took 2 percent. Other types of gear (haul seines, gill nets, floating traps, fyke nets, and otter trawls) accounted for less than one-half percent.

Of the total, 41 percent was landed in the Middle Atlantic area, 26 percent in the Gulf area, 17 percent in the Chesapeake area, 12 percent in the South Atlantic area, and the remaining 4 percent in New England.

# REVIEW OF CERTAIN MAJOR FISHERIES

## UNITED STATES AND ALASKA CLAM FISHERY

During 1955, the production of clam meats in the United States and Alaska totaled 34.4 million pounds valued at nearly 10.0 million dollars to the fishermen. Compared with 1954, this represented an increase of 6 percent in volume although the valuation of the total catch remained nearly the same.

The Middle Atlantic led all other areas in the yield of clam meats with 48 percent of the total production. The New England area (31 percent) was in second place followed by the Chesapeake States (12 percent), and Alaska (6 percent). The remaining 3 percent was taken in the South Atlantic, Gulf, and Pacific Coast States.

Dredges accounted for 16.4 million pounds or 48 percent of the total clam-meat production, while tongs, with 6.8 million pounds, accounted for 20 percent. Dip nets, rakes, forks, hoes, and shovels were used in taking the remaining 32 percent.

In Section 14 of this report, under the heading "Conversion Factors," there are tables which give the average state yield per United States standard bushel for the clams taken on the Atlantic and Gulf Coasts. Supplementary shellfish tables appear after the summary tables for each Atlantic and Gulf regional section.

# REVIEW OF CERTAIN MAJOR FISHERIES

## UNITED STATES AND ALASKA CRAB FISHERY

The catch of crabs in the United States and Alaska in 1955 totaled 135.7 million pounds valued at 10.1 million dollars to the fishermen. This was a decrease of 4.9 million pounds or 3 percent in volume but an increase of 386 thousand dollars or 4 percent in value compared with 1954.

The Chesapeake States (45.1 million pounds) continued to lead all other areas in production, accounting for 33 percent of the total. The South Atlantic area was in second place with 32.6 million pounds or 24 percent. Practically the entire catch in these two areas consisted of blue crabs. Dungeness crabs accounted for almost the entire Pacific Coast States production while king crabs dominated the Alaska crab catch.

Traps and pots (74.4 million pounds) accounted for 55 percent of the total crab production followed by trot lines with baits (31 percent) and otter trawls (7 percent).

In Section 14 of this Digest, under the heading "Conversion Factors," there are tables which give the average number of crabs per pound by species for each of the Atlantic Coast and Gulf States. Supplementary shellfish tables are also shown after the summary tables for each Atlantic and Gulf regional section.

# REVIEW OF CERTAIN MAJOR FISHERIES

## UNITED STATES OYSTER FISHERY

The United States 1955 oyster catch amounted to 77.5 million pounds valued at 30.5 million dollars representing a decrease of 4.4 million pounds or 5 percent in volume and 2.3 million dollars or 7 percent in value compared with 1954. A comparison of production by areas during the two years indicates the catch was greater on the Gulf and Pacific coasts and less for other areas in 1955.

The Chesapeake led all other areas accounting for 51 percent of the 1955 total catch. The Gulf area was in second place with 18 percent followed by the Pacific Coast States (15 percent). The remaining 16 percent was taken in waters in the New England Middle Atlantic, and South Atlantic States.

Dredges accounted for 55.4 million pounds or 71 percent of the total oyster catch, while tongs (17.9 million pounds) accounted for 23 percent. Rakes, grabs, and gathering by hand made up the remainder of the catch.

In Section 14 of this Digest are tables which give the volume of the bushel measures used for oysters in the various Atlantic and Gulf States and the average yield per bushel. Supplementary shellfish tables appear after the summary tables for each Atlantic and Gulf regional section.

## UNITED STATES AND ALASKA SHRIMP FISHERY

The 1955 catch of shrimp in the United States and Alaska totaled 244.3 million pounds valued at nearly 61.8 million dollars. This represented a decrease of 24.0 million pounds or 9 percent in volume but a slight increase of 951 thousand dollars or 2 percent in value compared with the previous year. The decline in poundage was partially due to inclement weather conditions in the major producing areas. Shrimp continued to provide the most revenue to fishermen accounting for approximately 18 percent of the value of the total U. S. and Alaska catch.

In the Gulf States area, shrimp accounted for 71 percent of the valuation of the total catch. Louisiana (72.0 million pounds) led in shrimp production in 1955, followed by Texas (71.5 million pounds), Florida (52.7 million pounds) and Mississippi (13.6 million pounds). These four states accounted for almost 86 percent of the total U. S. shrimp production. The remaining 14 percent was landed in the South Atlantic States, Pacific States, and Alaska.

Otter trawls accounted for 99 percent of the total production. The remaining 1 percent was caught by cast nets, bag nets, push nets, beam trawls, channel nets, traps, and pots.

# SECTION 13 - HISTORICAL FISHERY STATISTICS

Statistics of the fisheries of the United States are necessary for the best use of the Nation's aquatic resources. As series of data for extended periods of time are accumulated, the information becomes increasingly more valuable in indicating trends in the supply and utilization of fishery products. The extent to which these data are used is frequently dependent upon the ready availability of needed information to researchers, management officials, and members of the fishing industry.

The Fish and Wildlife Service has in its files and in scattered publications historical data which would be of use to researchers and persons interested in the fisheries. Unfortunately few know of the existence of the information. To make these series readily available, a section was added to the 1951 edition of "Fishery Statistics of the United States" entitled "Historical Fishery Statistics." As these historical data are assembled they will appear in this section.

Historical statistics published in previous digests include data on the menhaden, oyster, Pacific sardine and Atlantic ocean perch fisheries. The titles of these series and the identifying number of the digest in which each appears follows.

Series	Published in Statistical Digest
Menhaden Fishery, 1873 - 1951 . . . . .	No. 30
Oyster Fishery, 1880 - 1952 . . . . .	No. 34
Pacific Sardine Fishery, 1915 - 1953 . . . . .	No. 36
Atlantic Ocean Perch Fishery, 1930 - 1954 . . . . .	No. 39

The fifth series of historical data entitled "Pacific Herring Fishery, 1882 - 1955" follows:

## PACIFIC HERRING FISHERY, 1882 - 1955

Pacific herring, found on the west coast of North America from San Diego, California to Nome, Alaska is one of the principal species taken by United States fishermen. In 1937-- the year of peak production-- this fishery yielded a catch of 263.2 million pounds. Great natural fluctuations in abundance occur in members of the herring family and the Pacific herring is no exception. During the twenty years from 1936 to 1955, the catch by Pacific Coast and Alaskan fishermen ranged from a high of 263.2 million pounds in 1937 to a low of 36.5 million pounds in 1954.

Pacific herring are taken commercially from the Monterey district of California to the Kodiak area of Alaska. The catch in the Pacific Coast States is confined largely to the Monterey and San Francisco districts of California and the Puget Sound district of Washington. The fish are not found in abundance in the waters of the Pacific Coast States and the annual catch has normally ranged from 1.0 to 2.0 million pounds. In only four years since 1921, when continuous collection of data was begun in Washington, Oregon, and California, did the catch exceed 5.0 million pounds. The record catch occurred in 1952 when 10.2 million pounds were taken, largely in the San Francisco and Monterey districts of California.

Herring was one of the first species taken by United States fishermen in Alaska. In 1882-- the first year for which catch data were obtained-- a production of 3.0 million pounds was reported. Catches of 22.0 million pounds were taken in 1886, and 22.2 million pounds in 1887. However, production declined after 1887 and it was nearly 25 years before these yields were exceeded. World War I increased

## HISTORICAL FISHERY STATISTICS

the demand for salted herring, with a resultant increase in catch. The most pronounced growth, however, occurred in the years following the War when there was a large expansion in the reduction industry. By 1922, the total Pacific herring catch reached 82.5 million pounds. In 1924 it increased to 101.2 million pounds, and in 1934, totaled 204.4 million pounds.

Following the peak Alaska production of 261.4 million pounds in 1937, the catch declined sharply due to an unexplained disappearance of the fish. In only one year since 1940 has the catch exceeded 200.0 million pounds, and in eight of these years it was below 100.0 million pounds.

There have been decided fluctuations in the production of the fish from the Southeastern and Central districts of Alaska where the bulk of the Alaska herring catch is taken. In the years since 1920 the catch in Southeastern Alaska has ranged from a high of 165.9 million pounds in 1929 to a low of 6.2 million pounds in 1940. During the same period the yield in the Central area has ranged from a high of 182.9 million pounds in 1939 to a low of 300 thousand pounds in 1949.

In the Pacific States, herring are used primarily for bait. In a few years considerable quantities were canned. In 1952, when the sardine fishery was almost a complete failure, 39,735 cases (1.9 million pounds) of herring were produced in California.

In Alaska, the first commercial use of herring was in the manufacture of oil and fertilizer. In 1882, a plant was established for this purpose on upper Chatham Strait. While as a rule the major portion of the Alaskan catch is used for reduction, during most of the years from 1912 to 1922 the greater part of the catch was salted or canned. After 1922, the production of salted herring fluctuated, but generally declined, and with the exception of a small pack in 1950, none has been salted since 1948. During the years from 1916 to 1920 considerable quantities of herring were canned in Alaska. In 1919 a pack of over 100,000 cases of undetermined size was reported. However, the fish did not sell well and none has been canned since 1920. Halibut fishermen normally use between 5.0 and 6.0 million pounds of Alaskan-caught herring for bait.

Statistics on the catch of herring in the following tables were taken from Ocean Research Note 4 entitled "Historical Catch Statistics on Pacific Herring" which was prepared from various sources by O. E. Sette, Chief, Ocean Research of the Service's Branch of Fishery Biology.

# SECTION 14

## STATISTICAL SURVEY PROCEDURE

This report is another in a series of annual statistical reports containing data on the quantity and value of the commercial catch of fishery products and the numbers of persons and operating units engaged in the commercial fisheries of the United States and Alaska. The report has been prepared and published by the Branch of Commercial Fisheries, Fish and Wildlife Service, United States Department of the Interior, and is a continuation of a series inaugurated by its predecessor organizations in the Departments of Interior, Commerce, Commerce and Labor, and the United States Fish Commission.

In order that those who use the statistical data contained in this and previous reports may be informed as to the source of the figures and methods for their collection, it has been deemed advisable to outline, in moderate detail, the survey procedure followed. This procedure has been developed over a period of years, and changes in methods have been made at times when such changes have appeared to work toward general improvement. While the surveys in the several sections are not made in the same manner, owing to varying facilities and records in different states, an attempt has been made to make the data collected by various methods comparable with respect to the same year as well as over a period of years. Throughout the entire plan it has been the intention to coordinate State and Federal fishery statistical work so that there will be as little duplication of effort as possible.

### SECTIONAL SURVEYS

Statistical surveys of the fisheries and fishery industries of the various sections of the United States occupy by far the greatest part of the time of the statistical personnel of the Branch. In the course of these surveys, the field representatives visit the individual fishing localities of the various States to collect statistics on the volume and value of the catch of fish and shellfish, employment in the fisheries, quantity of fishing gear, number and classification of fishing and transporting craft, and the volume and value of manufactured fishery products and byproducts. The various phases of these surveys are discussed in detail in the sections following.

*History*--The first comprehensive statistical survey of the fisheries and fishery industries of the United States was made for the year 1880 by George Brown Goode, Assistant Director of the United States National Museum, and associates, with the cooperation of the Commissioner of Fisheries and the Superintendent of the Tenth Census. Data for specific fisheries, or restricted sections for years prior to 1880, also were collected in the early survey and recorded in Mr. Goode's reports. The survey for 1880, however, did not include the Mississippi river and its tributaries. Periodic general surveys of a limited number of States or limited areas of the United States were made for various of the intervening years between 1880 and 1908 and from 1909 to 1928. A survey of the entire United States was made for 1908. The next general survey of the entire United States was not made until 1931, although complete data for all sections, excluding the Mississippi River and its tributaries, were collected for 1929 and 1930. Complete data on the catch and operating units for these same sections were also collected for 1932. In the latter survey, however, lack of sufficient funds prohibited collection of data on the wholesale and manufacturing operations except those data collected as a part of the canned fishery products and byproducts survey. Various sections were surveyed during the years from 1933 to 1949, inclusive. A complete survey of all sections of the country was made for 1950. Since 1951, all of the coastal areas were canvassed, and catch records were obtained for the Lakes section. Data on the wholesale and manufacturing industries were collected in all of the surveys from 1933 to 1940, inclusive. In the years from 1941 to 1949 inclusive and in 1951 lack of personnel and funds precluded the collection of data on wholesale and manufacturing firms except for those data collected as part of the canned fishery products, byproducts, and packaged fish surveys.

The chart on the following page indicates the years for which surveys have been made in the various sections. Figures for more recent years are available from the Service in bulletin form, but data for the earlier years are available only in the Fish Commission and Bureau of Fisheries printed reports. These reports are available for reference in the Department of the Interior library and in many public libraries.

# STATISTICAL SURVEY PROCEDURE

Since the surveys of the fisheries have varied in completeness three legends have been used for the years shown in the chart to indicate whether complete, partial, or no surveys were conducted in the individual regions. The designation 'complete survey' has been used to indicate that basic operating unit and catch data were obtained and that complete information was collected on employment in wholesale and manufacturing establishments and on the production of manufactured fishery products. The legend 'partial survey' usually indicates that operating unit and catch statistics were collected, but that no information was obtained on employment in wholesale and manufacturing establishments and that only partial data were obtained on the production of manufactured fishery products. In some instances the designation 'partial survey' is used for regions in which only catch statistics were collected. The legend 'no survey' indicates that a general canvass was not conducted to obtain operating unit, catch, employment in wholesale and manufacturing plants, and complete manufactured products data. Although the charts indicated that in certain regions no surveys were conducted some information may be available on the landings at certain important ports. Likewise information on the catch of certain species, such as menhaden, may be available as a result of data collected in connection with the annual canned fish and byproducts survey. Data on the annual production of canned fishery products and byproducts have been collected for all regions since 1921, while information was obtained on the production of packaged fish for 1926 and annually since 1928.

A bibliography listing the various surveys made since 1880 and the publications in which the results were published appeared in Statistical Digest No. 21. A list of the statistical bulletins in the Current Fishery Statistics series published during 1955 may be found in Section 17 of this digest.

*Field Personnel*--The statistics contained in this volume have been collected by a group of trained marketing specialists which comprise a part of the permanent staff of the Branch of Commercial Fisheries of this Service.

*Period Covered*--These specialists are assigned permanent field stations, generally in the principal port within their field, and travel from that station in conducting their various surveys. They normally collect statistics of fishery operations for the year preceding that in which they are working; and since their field work occupies the greater part of the year, it is usually at least a year from the end of the calendar year for which they are collecting data before the figures are available. The data usually are collected and published on a calendar year basis, although for some States they are on a fiscal year basis. Prior to 1930, statistics on the catch of oysters in the Atlantic and Gulf States were collected for the oyster season; that is, from September to April, inclusive. Beginning with 1930 and continuing to the present time, they have been collected on the basis of the calendar year.

*Scope*--The coastal statistical surveys include canvasses of the commercial fisheries of the oceans and bays and of the coastal rivers as far inland as commercial fishing is important. This usually coincides with the range of commercial fishing for anadromous species. Statistics on the fisheries of the Mississippi River cover canvasses of the fisheries of the Mississippi River proper as well as all of its tributaries wherein commercial fishing for either fish, crustaceans, or mollusks is carried on. Statistics on the fisheries of the Great Lakes cover canvasses of the fisheries in the lakes proper, adjacent bays, the International Lakes of northern Minnesota, and rivers which sustain a commercial fishery having outlets into these waters. Statistics on the fisheries of Florida include the commercial fisheries in Lake Okeechobee and other inland lakes. Surveys for statistics of the wholesale and manufacturing fishery industries cover such plants located in the coastal, river, and lake areas adjacent to the waters mentioned above.

*Methods of Collection*--Several methods for the collection of fishery statistics are employed, each of which has been carefully studied to obtain the best results with the available personnel and funds. In most instances the field personnel obtain from local Customs officials lists of the names of fishing vessels, names and numbers of motorboats, and names of owners of these craft. Also it usually is possible to obtain the names of licensed commercial fishermen, fishing craft and some statistics on the catch from State fishery agencies; from other State, county or city sources; or from private organizations.

# STATISTICAL SURVEY PROCEDURE

Using available preliminary records as a guide, the field specialists visit each fishing community in their field unless these preliminary records are so complete that personal visits may be eliminated. If complete catch data are not available from central sources, wholesale dealers and manufacturers of fishery products are visited and data are obtained from them on their purchases of fishery products. While it is impossible for the few Service representatives available for this work to interview each fisherman in a given locality, the more important ones are visited, and a sufficient number of those of lesser importance are interviewed to obtain reliable information on their production, the number of fishing craft employed, the quantity of gear operated, and the number of persons employed as fishermen.

The state fishery agencies in a number of states have developed relatively complete statistical systems which greatly facilitate the Service's surveys in these states. In such instances the Service conducts only such surveys as may be necessary to make the data comparable with that of other States.

The Service obtains from the records of the State fishery agencies most of the catch statistics for the fisheries of the Great Lakes, the Northern Mississippi River Area, and the International lakes of Northern Minnesota. To obtain data on the number of fishermen, boats, vessels, and gear, the Service conducts such personal surveys among the fishermen as may be necessary to supplement the State records.

Service statistical personnel are stationed at Astoria, Oregon; Seattle, Washington; and San Pedro, California for the purpose of surveying the fisheries of the Pacific Coast States. As a rule they obtain from the records of the State fishery departments figures on the volume of the catch. The value of the catch is derived from state and dealer's records. In Washington and Oregon the data for operating units in the offshore fisheries are obtained from the records of various fishery organizations as well as from records of the State Department of Fisheries. Statistics of the wholesale fishery industry for this section are obtained largely by personal interviews.

In several States, the Service and the fishery agency of the respective state are cooperating in the collection and publication of current monthly data on the catch. These data form the basis of the annual catch data published in this report for the following States: Alabama, Florida, Maine, Mississippi, New Jersey, New York, North Carolina, Rhode Island, and Texas.

In the administration of the Alaska fisheries, the Service requires that copies of all receipts for fish and shellfish purchased from fishermen be furnished to the Service's Branch of Alaska Fisheries. The data on these tickets are compiled by that Branch and the summary data, by districts, are reproduced in this report.

Statistics on the volume of the catch of fish in the Great Lakes States usually are shown in weights as landed, which may be in the round or dressed condition. Statistics on the volume of the catch of fish taken in the remainder of the United States are usually shown in round weight.

The figures in the tables for shellfish represent the weight of the meats in the cases of univalve and bivalve mollusks and the round weight of crustaceans and such mollusks as squid and octopus.

*Shore and Vessel Fisheries*--In general, statistics of the shore fisheries, as collected by the Service's representatives, include data on the number of casual and regular fishermen; number of motor and other fishing boats and accessory boats (for our purpose craft of less than 5 net tons capacity are called 'boats'); type and quantity of gear used; and the volume, value, and method of capture of each species for each locality or group of localities. This method is not followed in some sections where the availability of data collected by the State fishery agencies obviates the necessity of detailed locality surveys.

Statistics of the vessel fisheries include data on the number in the crew; rig of vessels; net tonnage; kind and quantity of gear used; accessory boats carried; and volume, value, and method of capture of each species. For our purpose craft having a capacity of five net tons or over are called 'vessels'. As in the shore fisheries, the availability of figures collected by State fishery agencies may eliminate the necessity of our agents collecting these data for individual vessels.

# STATISTICAL SURVEY PROCEDURE

Statistics on the quantity of gear operated indicate the maximum number of units fished at any one time during the year. Gear carried in reserve for replacement is not enumerated.

All persons engaged in commercial fishing operations are included as fishermen. For our purpose in most areas fishermen not on vessels have been divided into 'regular' and 'casual'. Regular fishermen are defined as those who receive more than one-half of their annual income from fishing; whereas casual fishermen are those who receive less than one-half of their annual compensation from fishing. On the Pacific Coast and in Alaska it is impossible to separate regular from casual fishermen.

Since 1942, the catch of fish and shellfish has been credited to the port at which it was landed. Prior to the survey for that year it was the practice of the Service to credit the entire catch of a vessel to the principal port at which fish or shellfish were unloaded, regardless of the actual point of landing. This policy was discontinued since it quite often resulted in inconsistencies by crediting catches of some species to areas far removed from localities in which they are commonly taken. An outstanding example of this is the Southern trawl fishery conducted off the New Jersey, Maryland, Virginia, and North Carolina coasts. It is customary for fishing vessels from Massachusetts to operate in this fishery for 6 to 10 weeks during the winter season. Prior to the survey for 1942 the catch of these vessels, consisting principally of fish common to southern waters, was credited to Massachusetts. Under the present system, this catch is credited to the southern ports where it is landed.

Since 1949 on the Pacific Coast and 1951 for the balance of the country, craft, fishermen, and gear have been reported for each State in which they fished. A total exclusive of duplication is shown for each section, and for the United States as a whole. Prior to the surveys for 1949, each craft on the Pacific Coast was credited to its home port unless it did not fish from that port during the year. In that case, it was credited to the locality where it landed the greatest portion of its catch. Prior to the survey for 1951, each craft on the Atlantic and Gulf Coasts and interior waters was credited to the port where it landed the greatest portion of its catch during the year. This system was changed to provide more accurate data on the total number of craft operating in a given State. With the increased mobility of the fishing fleet in recent years, the number of vessels fishing in more than one state has increased greatly.

Beginning with data for 1951, the reporting of units of gear was standardized so that nets or lines made up of small units for ease in handling, but fastened together in fishing, were counted as a single unit rather than as a number of smaller units. Prior to 1951, the small units were sometimes counted as individual pieces of gear even though they were combined for fishing. This rule does not apply to halibut set or long lines on the Pacific Coast. In this fishery each skate of gear is counted as one line, even though they are fastened together in fishing, because the International Pacific Halibut Commission uses a skate of gear as a unit in its studies of fishing intensity.

*Publication of Data*-- Statistics on employment in the fisheries, craft and gear engaged, quantity and value of catch, and certain data on industries related to the fisheries are summarized according to geographic divisions and published in bulletin form as soon as possible after the completion of each survey. Later, the figures, in more detail, are included in the annual reports of the Service entitled 'Fishery Statistics of the United States' and in 'Alaska Fishery and Fur-Seal Industries'.

Data on the operating units (fishermen, fishing craft, and gear) and catch by counties for the Atlantic and Gulf States have been included in these annual statistical reports for the years from 1928 to 1938 except for 1932. These data have also been published in the reports for the years 1945 and 1950. County data were collected for the areas in which surveys were conducted during the years since 1938, except in Maryland since 1942. The data are on file in the Washington office of the Branch of Commercial Fisheries.

# STATISTICAL SURVEY PROCEDURE

417

## LOCAL AND SPECIAL SURVEYS

*Landings at Certain Massachusetts Ports*--Detailed statistics are collected on the landings of aquatic products by individual fishing craft at Boston, Gloucester, New Bedford, Plymouth, Provincetown, and other Cape Cod ports. Service representatives are permanently stationed in each of these areas. They obtain figures on the quantity and value of fish landed daily by fishing craft, the date of departure and arrival of the craft, the gear used in their capture, and the grounds from which the fish were taken. The Service's Branch of Fishery Biology and the Fishery Market News Service cooperate in the collection of these data.

Statistics on the landings at the above ports are released monthly and annually in bulletin form and detailed data are published in the annual statistical digests of the Branch. Products of American Fisheries received duty free at Boston and Gloucester from the treaty coasts of Newfoundland, Magdalen Islands, and Labrador, have not been included in the landings at these ports since 1938. Data on the landings at Boston and Gloucester have been collected annually since 1893. Some data are also available for these ports for earlier years. Information on landings at New Bedford has been collected annually since 1938 and at Plymouth, Provincetown, and other Cape Cod ports since 1945.

*Shad and Alewife Fisheries*--Owing to the importance of the Hudson and Potomac Rivers in the production of shad, surveys for statistics of the catch, value of the catch, and operating units are made annually. On the Potomac River similar statistics are also obtained for the alewife fishery. Much of the data required for these surveys are available from the State fishery agencies.

Statistics of the annual shad and alewife fisheries are not published separately in bulletin form. However, a summary of the data is published in the annual Statistical Digest.

Statistics of the shad fishery of the Hudson River are available for 1896, 1897, 1898, 1901, 1904, 1910, and annually since 1915, while data for the shad fishery of the Potomac River are available for 1896, 1901, 1904, 1909, 1915, from 1919 to 1942, inclusive, and annually since 1944. Statistics of the alewife fishery of the Potomac River are available for 1896, 1909, 1915, to 1942, inclusive, and annually since 1944.

*Pacific Halibut Fishery*-- Statistics of the Pacific halibut fishery are obtained by the Service's personnel in Seattle, aided by Service representatives in Alaska, and the International Pacific Halibut Commission. The fleet classification is that of the International Pacific Halibut Commission under which vessels that are listed by the Commission as having their home port in Alaska are included in the 'Alaska fleet', and all other vessels of United States registry landing at Seattle or ports in British Columbia or Alaska are included in the 'Washington fleet'. In the section 'Review of Certain Major Fisheries', the catch is credited to the point where landed. In the other sections of this report, all halibut is credited to the port where landed, except that all halibut landed by United States and Alaskan craft in British Columbia is credited to Alaska. Halibut statistics are included in the monthly and annual summaries published by the Seattle Market News office. Detailed statistics on this fishery are published in the annual statistical reports of the Branch. Statistics on the landings of halibut at Pacific Coast ports have been collected since 1925.

*Canned Fishery Products and Byproducts*--Beginning in 1921, the Service has made annual surveys for statistics of the canned fishery products and byproducts industries of every section. These are begun the first week in January of each year for statistics of the production in the preceding year. So far as possible, the Service obtains by mail from each domestic canned fishery products and byproducts plant figures on its annual production. Where it is impossible to obtain reports by mail, the report is secured personally by a Service agent. Included in the data obtained are statistics on the yield and value of the production for each commodity by can size, case size, and trade classification. The value

# STATISTICAL SURVEY PROCEDURE

shown for canned products and byproducts in the gross amount received by the packer at the production point. No deductions are made for commissions or expenses. Statistics on canned fishery products and byproducts in Alaska are collected by the Branch of Alaska Fisheries in connection with its regular survey of fishery activities in the Territory.

Annual statistical bulletins are issued on this trade, and detailed statistics are published in the annual Statistical Digest. Prior to 1921, canned fish and byproducts data were not collected for the entire country. However, data on the production of these products were usually obtained for the areas in which general canvass surveys were conducted. Since 1921, complete data have been obtained on the production of canned fish and byproducts in all areas of the country.

*Packaged Fish Trade*--Statistics on the annual production and value of fish packaged in the United States are obtained in conjunction with canned fishery products and byproducts survey. These data are released annually in bulletin form in the annual Statistical Digest. Statistics of the production of packaged fish are available for 1926 and annually since 1928, except that no data were collected in California for the years 1941 to 1946, inclusive.

*Cold-Storage Holdings of Fish*--Information on the monthly freezings and holdings of fishery products is obtained from cold storage warehouses by mail and by Service employees. Data are also obtained on the holdings of certain cured fish. Bulletins showing these statistics are issued monthly and annually.

Detailed cold-storage statistics also are published in the annual Statistical Digests issued by the Service. Information regarding cold-storage holdings of fishery products has been published since 1917 while data on the quantity of fish frozen have been released for the years from 1920 to 1925, inclusive, and annually since 1928.

*Foreign Fishery Trade*--Foreign fishery trade statistics are obtained from compilations made by the Bureau of the Census, Department of Commerce. Statistics on all known imported or exported fishery products have been assembled and published annually since 1926 in the Branch's Statistical Digest. For earlier years, figures are available in the reports of the Bureau of the Census, Bureau of Foreign and Domestic Commerce, the Bureau of Statistics, the Department of Commerce and Labor, or the Treasury Department.

## PRACTICES AND TERMS

Certain practices and terms used in this report are explained below.

*Area Designations*--The Roman numerals used to designate the various areas in the Atlantic Ocean and the Gulf of Mexico are those numbers assigned by the North American Council of Fishery Investigation.

*Days Absent*--In computing 'days absent' for vessels landing fares at the various ports, the day of arrival, but not the day of departure is included; thus a vessel leaving port on the 8th of the month and returning on the 15th of the month will be credited with 7 days absence. Prior to 1944, 'days absent' included both the day of departure and the day of arrival.

*Operating Units*--Operating units as referred to in this report include persons engaged in the fisheries, and craft and gear employed in the fisheries.

*Vessel*--The term 'vessel' refers to a craft having a capacity of five net tons or over.

*Boat*--The term 'boat' refers to a craft having a capacity of less than five net tons.

*Incidental Catch*--The term 'incidental catch' refers to the catch of certain species by a type of gear which ordinarily does not capture such species.

# STATISTICAL SURVEY PROCEDURE

*Percentages*--Percentages are usually shown as whole numbers. Fractions of percents are dropped if less than five-tenths, and the percentage is raised to the next higher integer if the fraction is greater than five-tenths. If the fraction is exactly five-tenths, odd integers are raised to the next even figure while even integers remain unchanged.

*Fish*--The term 'fish' as used in this report includes all species belonging to the class Pisces.

*Shellfish, etc.*--A shellfish is an aquatic invertebrate animal having a shell, such as a mollusk or crustacean. However, in order to reduce the classifications appearing in the catch tables, all items not properly listed as 'Fish' or 'Whale Products' have been included under 'Shellfish, etc.' Accordingly, there is included under this classification turtles, frogs, sponges, sea weed, worms, etc.

*Whale Products*--Since data are not available on the poundage of whales taken, statistics appearing in catch tables on the yield of these mammals represent the weight of whale products produced such as meal, sperm oil, whale oil, etc. The values shown represent the amount received by the manufacturer for the products.

*Converting*--Many of the figures shown in the statistical tables published herewith have been converted to thousands of pounds or thousands of dollars. In making these conversions the largest number from which a group of items is computed is raised or lowered to the nearest thousand. The individual items are adjusted to conform to the total thus obtained.

*Confidential Data*--The statistical data collected by the Branch are confidential, and unless specific authorization is given, are not divulged in a manner that would divulge private enterprise.

## CONVERSION FACTORS

It is the policy of the Service to show detailed catch figures of all products in pounds for the sake of uniformity and for purposes of comparison. This presents little difficulty in the case of fish since in very rare instances are fish reported in units of measure other than pounds. For shellfish, however, the units of measure may be bushels, sacks, barrels, numbers, gallons of meat, etc. These many units make standardization difficult, and when combined with the wide variation in the requirements or definitions of some of these units in the various States the problem becomes even more complex.

All univalve and bivalve mollusks are reported in pounds of meats in the detailed catch tables presented in this report. In addition, there are included supplementary tables for most of the sections, which give data on the production in bushels. These supplementary tables also give the production in number of certain other shellfish, such as crabs. There also is included in the General Review section of this report a table containing data on the shell weight of univalve and bivalve mollusks taken.

*Oysters*--Probably the greatest problem in the presentation of fishery statistics in uniform units of measure is in the case of oysters. Usually the production of oysters on the Atlantic and Gulf coasts is reported to Service personnel in bushels. Prior to the data obtained for the year 1930 bushels were converted to pounds of meats on the basis of a uniform yield of 7 pounds of meats to the bushel. However, it was found that there was considerable variation in the yield of oysters per bushel particularly in southern states where the yield has ranged as low as half the conversion factor used prior to 1930. There follows a table which gives the measures used for oysters in the various States and the average yields per bushel. The statistical tables in this report are based on these average yields.

# SECTION 15 - GLOSSARY

In order to prevent misunderstanding in the use of common names employed in the tables and discussions, the following list of common and scientific names is given.

Common names as shown in Service reports	Other common names	Scientific names
FISH		
Alewife .....	{ Branch herring, big-eyed herring, river herring .....	<i>Pomolobus pseudoharengus</i>
Amberjack .....	{ Blueback, glut herring, shad herring Jack .....	<i>Pomolobus aestivalis</i> <i>Seriola</i> species
Anchovy .....	.....	<i>Engraulis mordax</i>
Angelfish .....	.....	{ <i>Pomacanthus</i> species <i>Holacanthus</i> species
Anglerfish .....	{ Goosefish, allmouth, headfish, monkfish, bellyfish .....	<i>Lophius piscatorius</i>
Barracuda .....	.....	<i>Sphyræna</i> species
Black bass .....	{ Smallmouth bass .....	<i>Micropterus dolomieu</i>
Bluefish .....	{ Largemouth bass .....	<i>Micropterus salmoides</i>
Blue pike .....	Tailor, skipjack .....	<i>Pomatomus saltatrix</i>
Blue runner or hardtail ...	Pike perch, hard pike, blue pickerel (Canada) .....	<i>Stizostedion vitreum glaucum</i>
Bonito .....	Runner .....	<i>Caranx crysos</i>
Bowfin .....	See tuna and tunalike fishes	
Buffalofish .....	{ Fresh-water dogfish, tchoupique, grindle .....	<i>Amia calva</i>
Burbot .....	Winter carp .....	<i>Ictiobus</i> species
Butterfish .....	Lawyer, ling .....	<i>Lota maculosa</i>
Cabezone .....	Marbled sculpin .....	<i>Poronotus triacanthus</i> <i>Scorpaenichthys marmoratus</i>
Cabio .....	{ Crab eater, coalfish, lemonfish, black bonito .....	<i>Rachycentron canadus</i>
Cabrilla .....	Rock bass .....	<i>Epinephelus analogus</i>
Carp .....	German carp, summer carp .....	<i>Cyprinus carpio</i>
Catfish and bullheads .....	.....	{ <i>Ameiurus</i> species <i>Ictalurus</i> species <i>Pilodictis olivaris</i>
Chub .....	{ Longjaw, bluefin, blackfin (United States), tullibee (Canada) .....	All <i>Leucichthys</i> except <i>artedi</i> (in Great Lakes)
Cigarfish .....	Scad .....	<i>Decapterus punctatus</i>
Cisco .....	Herring (Canada) .....	<i>Leucichthys artedi</i> (Lake Erie only)
Cod .....	Codfish .....	{ <i>Gadus morhua</i> (Atlantic) <i>Gadus macrocephalus</i> (Pacific)
Corbina .....	California whiting, corvina, surffish .....	<i>Menticirrhus undulatus</i>
Crappie .....	{ White crappie, calico bass .....	<i>Pomoxis annularis</i>
Crevalle .....	Black crappie .....	<i>Pomoxis sparoides</i>
Croaker .....	Jack, jackfish .....	<i>Caranx hippos</i>
Cunner .....	Crocus, hardhead .....	<i>Micropogon undulatus</i>
Cusk .....	Chogset, blue perch, bergall.....	<i>Tautoglabrus adspersus</i>
Dolly varden trout .....	.....	<i>Brosme brosme</i>
Dolphin .....	Salmon trout, bull trout .....	<i>Salvelinus malma</i>
Drum:	.....	<i>Coryphaena hippurus</i>
Black .....	Oyster cracker, oyster drum, sea drum	<i>Pogonias cromis</i>
Red .....	Channel bass, redfish, spotted bass.	<i>Sciaenops ocellata</i>
Eel:	.....	
Common .....	.....	<i>Anguilla bostoniensis</i>
Conger .....	.....	<i>Leptocephalus conger</i>
Flounder:	.....	
Gray sole .....	.....	<i>Glyptocephalus cynoglossus</i>
Lemon sole .....	.....	<i>Pseudopleuronectes dignabilis</i>

(Continued on next page)

MENHADEN REDUCTION PLANT

# SECTION 16 - PICTORIAL SECTION

As many of the readers of this publication may not be familiar with all of the species of fish and shellfish, etc., taken commercially in the United States and Alaska, illustrations of many of the various species are included in the following pages. The descriptive material appearing with each species includes the areas in which commercial landings are made in the United States and does not constitute the extreme limits in which they occur. Similarly, the gear listed for each species do not represent the only types of apparatus by which these species are obtained, but represent those types which are normally used in their capture. The gear do not necessarily appear in the order of their importance.

For more detailed information on the nomenclature of the fishery products listed below the reader is referred to Section 15 of this publication entitled "Glossary".

ALEWIFE  
RANGE - FLORIDA TO NEW ENGLAND  
GEAR - POUND NETS, GILL NETS, WEIRS,  
DIP NETS, HAUL SEINES, FLOATING TRAPS,  
FYKE NETS

ANGLERFISH  
RANGE - NEW JERSEY TO MASSACHUSETTS  
GEAR - OTTER TRAWLS, POUND NETS

AMBERJACK  
RANGE - FLORIDA  
GEAR - HAND LINES, TROLL LINES

ANCHOVY  
RANGE - CALIFORNIA TO WASHINGTON  
GEAR - PURSE SEINES AND HAUL SEINES

ANGELFISH  
RANGE - FLORIDA  
GEAR - HAUL SEINES

BARRACUDA (ATLANTIC)  
RANGE - FLORIDA  
GEAR - TROLL LINES, HAND LINES

BARRACUDA (PACIFIC)  
RANGE - CALIFORNIA  
GEAR - PURSE SEINES, SET LINES, HAND LINES,  
TROLL LINES, GILL AND TRAMMEL NETS

# PICTORIAL SECTION

BLUEFISH  
RANGE - GULF OF MEXICO TO NEW ENGLAND  
GEAR - HAUL SEINES, GILL NETS, POUND NETS,  
TROLL LINES, PURSE SEINES

BURBOT  
RANGE - GREAT LAKES  
GEAR - GILL NETS, FYKE NETS, POUND  
NETS, TRAP NETS

BLUERUNNER OR HARDTAIL  
RANGE - GULF OF MEXICO  
GEAR - HAUL SEINES, GILL NETS, POTS

BUTTERFISH  
RANGE - FLORIDA TO NEW ENGLAND  
GEAR - POUND NETS, HAUL SEINES, OTTER TRAWLS

BONITO (ATLANTIC)  
RANGE - NORTH CAROLINA TO MASSACHUSETTS  
GEAR - POUND NETS, TROLL LINES, GILL NETS

CABIO  
RANGE - FLORIDA TO VIRGINIA  
GEAR - HAND LINES, POUND NETS

BOWFIN  
RANGE - FRESH-WATER  
GEAR - HAUL SEINES, TRAP NETS, FYKE NETS

CARP  
RANGE - FRESH-WATER  
GEAR - HAUL SEINES, GILL NETS, TRAP NETS,  
FYKE NETS, POUND NETS, TROT LINES

BUFFALOFISH  
RANGE - FRESH-WATER  
GEAR - HAUL SEINES, FYKE NETS, TRAMMEL  
NETS, TROT LINES

CATFISH  
RANGE - FRESH-WATER  
GEAR - HAUL SEINES, TROT LINES, POUND  
NETS, POTS, FYKE NETS

# PICTORIAL SECTION

CHUB  
RANGE - GREAT LAKES  
GEAR - GILL NETS

CIGARFISH  
RANGE - FLORIDA  
GEAR - HAUL SEINES

COD  
RANGE - VIRGINIA TO MAINE, WASHINGTON,  
AND ALASKA  
GEAR - OTTER TRAWLS, TRAWL LINES, GILL NETS

CRAPPIE  
RANGE - FRESH-WATER LAKES  
GEAR - HAUL SEINES, LINES, POTS

CREVALLE  
RANGE - SOUTH ATLANTIC AND GULF STATES  
GEAR - HAUL SEINES, GILL NETS, LINES

CROAKER  
RANGE - GULF OF MEXICO TO NEW YORK  
GEAR - POUND NETS, OTTER TRAWLS, HAUL SEINES,  
GILL NETS

CUNNER  
RANGE - NEW ENGLAND  
GEAR - OTTER TRAWLS, HAND LINES

CUSK  
RANGE - NEW ENGLAND  
GEAR - OTTER TRAWLS, TRAWL LINES

DOLLY VARDEN TROUT  
RANGE - PACIFIC  
GEAR - POUND NETS, GILL NETS, LINES

DOLPHIN  
RANGE - FLORIDA TO NORTH CAROLINA  
GEAR - TROLL LINES

# PICTORIAL SECTION

DRUM, BLACK  
RANGE - TEXAS TO NORTH CAROLINA  
GEAR - HAUL SEINES, POUND NETS, LINES

LEMON SOLE  
RANGE - NEW YORK TO MAINE  
GEAR - OTTER TRAWLS

DRUM, RED  
RANGE - TEXAS - MARYLAND  
GEAR - POUND NETS, HAUL SEINES, GILL NETS,  
LINES

DAB  
RANGE - MASSACHUSETTS TO NOVA SCOTIA  
GEAR - OTTER TRAWLS, TRAWL LINES

EEL, COMMON  
RANGE - FLORIDA TO NEW ENGLAND AND IN  
MISSISSIPPI RIVER, LAKE ONTARIO  
GEAR - POTS, SPEARS, POUND NETS

BLACKBACK OR WINTER FLOUNDER  
RANGE - NORTH CAROLINA TO MAINE  
GEAR - OTTER TRAWLS, POUND NETS, FYKE NETS,  
SPEARS, LINES

EEL, CONGER  
RANGE - FLORIDA TO NEW ENGLAND  
GEAR - OTTER TRAWLS

FLUKE  
RANGE - TEXAS TO MASSACHUSETTS  
GEAR - OTTER TRAWL, SPEARS, LINES
