

ZOOPLANKTON VOLUMES OFF THE PACIFIC COAST, 1955

SPECIAL SCIENTIFIC REPORT-FISHERIES No. 177

UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE

EXPLANATORY NOTE

The series embodies results of investigations, usually of restricted scope, intended to aid or direct management or utilization practices and as guides for administrative or legislative action. It is issued in limited quantities for official use of Federal, State or cooperating agencies and in processed form for economy and to avoid delay in publication.

United States Department of the Interior, Fred A. Seaton, Secretary
Fish and Wildlife Service, John L. Farley, Director

ZOOPLANKTON VOLUMES OFF THE PACIFIC COAST, 1955

Prepared by

The Staff of the South Pacific Fishery Investigations

Special Scientific Report--Fisheries No. 177.

Washington, D.C.

August 1956

Zooplankton Volumes off the Pacific Coast, 1955

This report, the sixth in a series, contains a record of the volumes of zooplankton collected on survey cruises of the California Cooperative Oceanic Fisheries Investigations off the Pacific coast of California and Baja California during 1955. Survey cruises were made at monthly intervals except in August, September and November. During August, four vessels of the California Cooperative Oceanic Fisheries Investigations cooperated with vessels of other organizations (Pacific Oceanic Fishery Investigations of the United States Fish and Wildlife Service, the University of Washington, the Pacific Oceanographic Group of the Fisheries Research Group of Canada, and a number of Japanese organizations) in making a synoptic oceanographic survey of the Pacific Ocean north of 20° north latitude. The operation has been designated "Norpac", and data collected during this cruise will be published separately. Special cruises were made off southern California in September and November, and data from these also will be published separately.

Vessels participating in cruises during 1955 included the "Crest", "Horizon", "Stranger", "Spencer F. Baird", and "Paolina T.", operated by the Scripps Institution of Oceanography of the University of California, and the "Black Douglas", operated by the South Pacific Fishery Investigations of the United States Fish and Wildlife Service.

The tables in this report are designed to serve a twofold purpose: (1) to record the "wet" volumes of plankton samples collected on 9 survey cruises made in 1955 (columns 9 and 10), and (2) to put on record the data for each haul, including station number (column 1), location (columns 2 and 3), date and time of collection (columns 4-6), volume of water strained (column 7) and the estimated depth of the haul (column 8).

The nets used in the collection of samples, the methods of collection, and procedures followed in standardizing data are identical to those described in previous reports in this series. Each haul was an oblique tow made from approximately 140 meters deep to the surface (depth of water permitting).

Plankton collections are used in studying the early life histories of the sardine and other commercially important or potentially important fishes, and also in studying the productivity of spawning areas. The former investigations are being conducted by the South Pacific Fishery Investigations of the Fish and Wildlife Service, the latter by the Scripps Institution of Oceanography of the University of California. These investigations are part of the California Cooperative Oceanic Fisheries Investigations, a program sponsored by the Marine Research Committee, and carried out by the Scripps Institution of Oceanography of the University of California, the Bureau of Marine Fisheries of the California Department of Fish and Game, the California Academy of Sciences, the Hopkins Marine Station of Stanford University, and the South Pacific Fishery Investigations of the Fish and Wildlife Service.

The earlier publications in this series are the following:
