NOAA TECHNICAL REPORTS

National Marine Fisheries Service, Special Scientific Report--Fisheries Series

The major responsibilities of the National Marine Fisheries Service (NMFS) are to monitor and assess the abundance and geographic distribution of fishery resources, to understand and predict fluctuations in the quantity and distribution of these resources, and to establish levels for optimum use of the resources. NMFS is also charged with the development and implementation of policies for managing national fishing grounds, development and enforcement of domestic fisheries regulations, surveillance of foreign fishing off United States coastal waters, and the development and enforcement of international fishery agreements and policies. NMFS also assists the fishing industry through marketing service and economic analysis programs, and mortgage insurance and vessel construction subsidies. It collects, analyzes, and publishes statistics on various phases of the industry.

The Special Scientific Report—Fisheries series was established in 1949. The series carries reports on scientific investigations that document long-term continuing programs of NMFS, or intensive scientific reports on studies of restricted scope. The reports may deal with applied fishery problems. The series is also used as a medium for the publication of bibliographies of a specialized scientific nature.

NOAA Technical Reports NMFS SSRF are available free in limited numbers to governmental agencies, both Federal and State. They are also available in exchange for other scientific and technical publications in the marine sciences. Individual copies may be obtained (unless otherwise noted) from NOAA Publications Section, Rockville, Md. 20852. Recent SSRF's are:

ABSTRACT

The Southeast Fisheries Center, Pascagoula, Mississippi Laboratory uses a nine-digit numeric code to catalog marine organisms. The basic code was adapted from the FAO taxonomic code developed in 1960, to which generic and specific levels were added and considerable classification modifications adopted.

This publication provides the code listing for fishes. Succeeding publications will deal with such groups as crustacea, mollusca, and various invertebrates.

INTRODUCTION

At the request of the biological and fisheries panel of the Cooperative Investigations of the Caribbean and Adjacent Regions (CICAR) a numeric code for biological names as employed by the National Marine Fisheries Service's Southeast Fisheries Center is presented for use in the intercalibration of biological data between participating members of the Program. For the purposes of meeting CICAR program needs, priority consideration has been given to releasing codes covering three major faunal groups: fishes, crustaceans, and mollusks. The present paper constitutes the first of these three

categories to meet the immediate coding requirements of the CICAR juvenile fish project.

The Southeast Fisheries Center's Pascagoula Laboratory, Pascagoula, Miss., has amassed over 200,000 records on some 30,000 nominal species of marine organisms since 1950, and were it not for a numeric coding system for inventorying and processing faunal data the usefulness of this valuable library would be severely limited. The present code is an adaptation from a 5-digit code developed by FAO (1960) to catalog families of aquatic organisms. We expanded the code by adding generic and specific levels and have extensively rearranged and added taxa at all levels to accommodate the large number of species present in the Gulf and Caribbean area. Bullis and Roe (1967) describe the development and structure of this code.

Figure 2.—Species card format used at the NMFS Southeast Fisheries Center, Pascagoula Laboratory, Pascagoula, Mississippi.

code for that species—the latter entered at punching time.

Species cards are filed numerically by bionumeric code to expedite data retrieval and processing. Station cards are filed numerically by station number.

Since automated data processing is carried on with the UNIVAC 9200 computer system maintained at the Pascagoula Laboratory, the bionumeric code offers many advantages over an alphabetic or alphanumeric code particularly in sorting, both on the electronic card sorter and in the computer.

Additions to the bionumeric code are provided through identifications furnished by either staff biologists or by cooperating scientists. Much of the material collected at sea is distributed to numerous cooperating institutions, museums, and individual taxonomists. These, in turn, furnish identifications of the received material which are punched on species cards and added to the data file as corroborative identifications. When species not previously taken by us are encountered, entries are added to the bionumeric file. Initials and location (coded) of the identifier are entered on the new species cards to verify feed records and to avoid duplication during data processing. Synonyms (when known) are given the same bionumeric code as accepted names and are distinguished in the listing by a preceding asterisk (*). Identifications by cooperating scientists or institutions are not changed within the decks although there is constant screening of current literature to identify and correct inconsistencies and identifications. The problem of identifying synonyms and cross-indexing changing nomenclature is evidently unresolved in all other attempts to numerically code biological names as well. The problem has not proved critical under the workloads imposed by the card and data volumes described above, so, recognizing the eventual need to face the problem for archiving data, the

matter can be conveniently sidestepped for the present.

ACKNOWLEDGMENTS

We are deeply indebted to many in the ichthyological community for the editorial assistance they have given in preparation of this code. Special thanks are extended to Dr. Daniel Cohen, Charles Karnella, Dr. Bruce Collette, and Stewart Springer, NMFS National Systematics Laboratory, Washington, D.C.; Dr. Victor G. Springer, Division of Fishes, U.S. National Museum, Smithsonian Institution, Washington, D.C.; Dr. James Bohlke and Dr. James Tyler, Department of Ichthyology and Herpetology, The Academy of Natural Sciences, Philadelphia, Pa.; Elmer J. Gutherz, NMFS Southeast Fisheries Center, Pascagoula Laboratory, Pascagoula, Miss.; and Luis R. Rivas, NMFS Eastern Gulf Sport Fisheries Marine Laboratory, Panama City, Fla., for their many suggestions and corrections and for patiently reviewing and editing the completed fish code. The code does not represent a consensus among the above, and we assume responsibility for both seemingly arbitrary decisions and all technical errors.

621. Predation by sculpins on fall chinook salmon, *Oncorhynchus tshawytscha*, fry of hatchery origin. By Benjamin G. Patten. February 1971, iii + 14 pp., 6 figs., 9 tables.
622. Number and lengths, by season, of fishes caught with an otter trawl near Woods Hole, Massachusetts, September 1961 to December 1962. By F. E. Lux and F. E. Nichy. February 1971, iii + 15 pp., 3 figs., 19 tables.
623. Apparent abundance, distribution, and migrations of albacore, *Thunnus alabunga*, on the North Pacific longline grounds. By Brian J. Rothschild and Marian Y. Y. Yong. September 1970, v + 37 pp., 19 figs., 5 tables.
624. Influence of mechanical processing on the quality and yield of bay scallop meats. By N. B. Webb and F. B. Thomas. April 1971, iii + 11 pp., 9 figs., 3 tables.
625. Distribution of salmon and related oceanographic features in the North Pacific Ocean, spring 1968. By Robert R. French, Richard G. Bakkala, Masanao Osako, and Jun Ito. March 1971, iii + 22 pp., 19 figs., 3 tables.
626. Commercial fishery and biology of the freshwater shrimp, *Macrobrachium*, in the Lower St. Paul River, Liberia, 1952-53. By George C. Miller. February 1971, iii + 13 pp., 8 figs., 7 tables.
627. Calico scallops of the Southeastern United States, 1959-69. By Robert Cummins, Jr. June 1971, iii + 22 pp., 23 figs., 3 tables.
628. Fur Seal Investigations, 1969. By NMFS, Marine Mammal Biological Laboratory. August 1971, 82 pp., 20 figs., 44 tables, 23 appendix A tables, 10 appendix B tables.
629. Analysis of the operations of seven Hawaiian skipjack tuna fishing vessels, June-August 1967. By Richard N. Uchida and Ray F. Sumida. March 1971, v + 25 pp., 14 figs., 21 tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - 35 cents.
630. Blue crab meat. I. Preservation by freezing. July 1971, iii + 13 pp., 5 figs., 2 tables. II. Effect of chemical treatments on acceptability. By Jurgen H. Strasser, Jean S. Lennon, and Frederick J. King. July 1971, iii + 12 pp., 1 fig., 9 tables.
631. Occurrence of thiaminase in some common aquatic animals of the United States and Canada. By R. A. Greig and R. H. Gnaedinger. July 1971, iii + 7 pp., 2 tables.
632. An annotated bibliography of attempts to rear the larvae of marine fishes in the laboratory. By Robert C. May. August 1971, iii + 24 pp., 1 appendix I table, 1 appendix II table. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - 35 cents.
633. Blueing of processed crab meat. II. Identification of some factors involved in the blue discoloration of canned crab meat *Callinectes sapidus*. By Melvin E. Waters. May 1971, iii + 7 pp., 1 fig., 3 tables.
634. Age composition, weight, length, and sex of herring, *Clupea pallasii*, used for reduction in Alaska, 1929-66. By Gerald M. Reid. July 1971, iii + 25 pp., 4 figs., 18 tables.
635. A bibliography of the blackfin tuna, *Thunnus atlanticus* (Lesson). By Grant L. Beardsley and David C. Simmons. August 1971, 10 pp. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - 25 cents.
636. Oil pollution on Wake Island from the tanker *R. C. Stouer*. By Reginald M. Gooding. May 1971, iii + 12 pp., 8 figs., 2 tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price 25 cents.
637. Occurrence of larval, juvenile, and mature crabs in the vicinity of Beaufort Inlet, North Carolina. By Donnie L. Dudley and Mayo H. Judy. August 1971, iii + 10 pp., 1 fig., 5 tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price 25 cents.
638. Length-weight relations of haddock from commercial landings in New England, 1931-55. By Bradford E. Brown and Richard C. Hennemuth. August 1971, v + 13 pp., 16 figs., 6 tables, 10 appendix A tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price 25 cents.
639. A hydrographic survey of the Galveston Bay system, Texas 1963-66. By E. J. Pullen, W. L. Trent, and G. B. Adams. October 1971, v + 13 pp., 15 figs., 12 tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price 30 cents.
640. Annotated bibliography on the fishing industry and biology of the blue crab, *Callinectes sapidus*. By Marlin E. Tagatz and Ann Bowman Hall. August 1971, 94 pp. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price \$1.00.
641. Use of threadfin shad, *Dorosoma petenense*, as live bait during experimental pole-and-line fishing for skipjack tuna, *Katsuwonus pclamis*, in Hawaii. By Robert T. B. Iversen. August 1971, iii + 10 pp., 3 figs., 7 tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price 25 cents.
642. Atlantic menhaden *Brevoortia tyrannus* resource and fishery—analysis of decline. By Kenneth A. Henry. August 1971, v + 32 pp., 40 figs., 5 appendix figs., 3 tables, 2 appendix tables. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 - Price 45 cents.
646. Dissolved nitrogen concentrations in the Columbia and Snake Rivers in 1970 and their effect on chinook salmon and steelhead trout. By Wesley J. Ebel. August 1971, iii + 7 pp., 2 figs., 6 tables.
