uation against the background of longer-term trends and to focus attention on a very few broad issues which will require consideration and action by governments. Fisheries products are discussed in one section which contains information on trends in quantity produced, changes in output of end products, inter-

national trade, trends in prices and marketing conditions, and whaling. The balance of the publication concerns agricultural and forest products and reports generally on indicators of the world situation, prices and purchasing power, consumption and nutritional levels, and prospects for 1950/51.
