The printing of this publication has been approved by the Director of the Bureau of the Budget,  
May 21, 1957. 5/31/57

## CONTENTS

COVER: Menhaden are customarily processed into fish meal and oil. The quality of the meal, an important part of poultry rations, is largely determined by its content of amino acids, the building blocks of animal tissue. The structural formula of methionine, a sulfur-containing amino acid, is illustrated.
